I. INTRODUCTION

The Food Stamp Program (FSP) is the largest domestic food and nutrition assistance program administered by the U.S. Department of Agriculture's Food and Nutrition Service (FNS), providing millions of Americans with the means to purchase food for a nutritious diet. During fiscal year (FY) 2004, the FSP served an average of 24 million people per month and paid out over $24 billion in benefits.

The characteristics of food stamp households and the level of participation in the FSP change over time in response to economic and demographic trends and legislative adjustments to program rules. To measure the effect of these changes on the FSP, FNS relies on data from the FSP Quality Control (FSPQC) database. This database is an edited version of the raw datafile of monthly case reviews conducted by state FSP agencies to assess the accuracy of eligibility determinations and benefit calculations for the state's FSP caseload.[1]

This document describes how the raw data are cleaned and edited to create the FSPQC database. It also describes how the QC Minimodel—one of FNS' food stamp microsimulation models—uses the FSPQC database to simulate the impact of various reforms to the FSP on current FSP participants.

Chapter II provides an overview of the FSP Quality Control System, the resulting raw datafile, and the creation of the FSPQC database. This overview, written for a nontechnical audience, is designed to give analysts and new users of the data enough general information to analyze and interpret the results of tabulations and QC Minimodel reform simulations.

---

[1] In this report, we refer to the original datafile as the raw datafile and the edited version as the FSPQC database.

Chapter III provides more detail on the FSPQC database file development process. This chapter describes the programs used to transform the raw data into the FSPQC database, the algorithms used to edit the data for consistency, and the development of the weights for the file.

Chapter IV provides a technical description of the procedures used to transform data elements from the FSPQC database into the data elements required as inputs to the QC Minimodel, and documents the QC-specific portions of the QC Minimodel.[2]

Chapter V is the codebook for the FY 2004 FSPQC database. For each variable in the database, the codebook lists the variable name, origin, and description, including all the valid values of the variable. This chapter also explains how to use the codebook.

Appendix A contains an assessment of the quality of selected variables in the FY 2004 FSPQC database. Users should read this appendix before using the FSPQC database as it recommends that some variables not be used and that others be used with caution. Appendix B describes automated edits to the raw data. Appendix C lists variables that were dropped, significantly changed, or new on the FY 2004 FSPQC database. Appendix D shows the derivation of monthly sampling weights used in the FSPQC file. Appendix E lists the state and region identification codes used in the file. Appendix F contains the parameter values used to determine FSP eligibility in FY 2004, including gross and net income screens, deductions, and maximum benefit amounts. Appendix G contains the Quality Control Review Schedule–the coding form on which the raw data are originally recorded by the state QC System reviewers.

---

[2] Documentation of the generic portions of the QC Minimodel can be found in the *1999 MATH SIPP Programmer's Guide, Technical Description, and Codebook* (Bloom et al, 2003).

Key Changes to the FY 2004 FSPQC Database

The raw datafile in FY 2004 is very similar to the raw datafile in FY 2003. There are no new variables and only a few variables have changed. However, as part of our on-going examination of the FSPQC file development process, we have updated some of our file editing procedures. Our coding modifications are described briefly below (see Chapter III, Section B and Appendix B for more details):

- We revised the procedures for calculating the child support deduction (FSCSDED), the dependent care deduction (FSDEPDED), and the excess shelter deduction (FSSLTDED).

- We developed a new procedure to improve consistency between dependent care expenses (DPCOST1 to DPCOST16) and the dependent care deduction (FSDEPDED).

- We developed a new procedure to improve consistency between the recorded utility amount (UTIL) and variables indicating standard utility allowance usage (SUA1) and proration (SUA2).

- We developed procedures for identifying households participating in SSI Combined Application Projects (SSI-CAP) and assigning Food Stamp benefits to these households.

- In previous years, we kept information on 15 persons per household. In FY 2004, we retained information on 16 persons per household because multiple households had valid information for a 16th person.

II. OVERVIEW OF THE FSPQC DATABASE

The FSPQC database is an edited version of the raw datafile generated by the Food Stamp Program's Quality Control System. The FSPQC database contains detailed demographic, economic, and FSP eligibility information for a nationally representative sample of approximately 49,000 FSP units.[3] These data, which are produced annually, are well suited for tabulations of the characteristics of food stamp units and for simulating the impact on current FSP units of various reforms to the FSP. This chapter provides an overview of the raw datafile and the processing and edits that convert it to the FSPQC database.

A. THE QUALITY CONTROL SYSTEM

The raw datafile is generated from the monthly quality control reviews of FSP cases conducted by state FSP agencies as part of the Quality Control System. The primary objective of the Quality Control (QC) review is to assess the accuracy of eligibility determinations and benefit calculations. That is, a QC review is designed to determine (1) if units are eligible for participation and receiving the correct benefit amount, or (2) if unit participation is correctly denied or terminated. QC reviews are essentially an audit through which states are held accountable for the accuracy of FSP certification.

The Quality Control System is based on a national sample of participating units and a somewhat smaller national sample of denials and terminations. The national sample of

---

[3] The term "FSP unit" refers to individuals who together are certified for and receive food stamps. The term "FSP household" refers to all individuals who reside together in a household that contains at least one FSP unit. An FSP household may contain multiple FSP units and/or individuals who do not receive food stamps. However, the QC data only shows one unit per household.

participating units is stratified by month and by the 50 states, the District of Columbia, Guam, and the Virgin Islands.

State quality control reviewers collect data in the active case file. These reviewers gather financial and demographic information from the sampled household's case file, visit the household to re-interview the participants, and then determine whether the household received the correct FSP benefit amount. The review information is entered on a data coding form either manually or electronically, sent to FNS' national computer center, and entered into the raw datafile. FNS regional offices conduct a federal re-review of a subsample of the original state sample. Federal re-review data are also sent to the national computer center where they are entered into the raw datafile and used in conjunction with the state review data to calculate the official payment error rate for each state. States are sanctioned or rewarded on the basis of their official payment error rates.

The data entered into the raw datafile is the financial and demographic information collected during the review. The exception is the authorized benefit amount, which is the benefit determined by the caseworker. If the authorized benefit amount varies by over $25 from the correct benefit amount or if the household is found to be ineligible, as determined by the reviewer, the amount in error is also entered in the raw datafile.

Although the primary objective of the Quality Control System is calculating state payment error rates, the resulting raw datafile also functions as an important source of detailed demographic and financial information on a large sample of active food stamp households in a given fiscal year. The FSPQC database is the source for FNS' annual report entitled *Characteristics of Food Stamp Households* and for FNS' QC Minimodel, a microsimulation model that estimates the impact of proposed reforms to the FSP on current participants.

B. THE RAW DATAFILE

Each month, food stamp agencies in the 50 states, the District of Columbia, Guam, and the Virgin Islands draw two samples: one of households receiving food stamps (active cases), and another smaller sample of households that were either terminated from the program or applied for the program but were denied benefits (negative cases). Only the datafile of active cases is used to create the FSPQC database. While most participating food stamp units are subject to sampling in the active case file, certain types of units that are not appropriate for review are excluded. Specifically, the active case universe excludes cases in which the participants:

- Died or moved outside the state

- Received benefits by a disaster certification authorized by FNS

- Received benefits under a 60-day continuation of certification

- Were under investigation for FSP fraud (including those with pending fraud hearings)

- Were appealing a notice of adverse action and the review date fell within the period covered by continued participation pending hearing

- Received restored benefits in accordance with the FNS-approved state manual but who were otherwise ineligible

The sampling unit within the active universe is the food stamp unit as defined in an FNS-approved state manual.

State sampling plans must conform to accepted principles of probability sampling. A state may either use simple random sampling plan or a more complex sampling design that best meets its needs. Sampling designs other than simple random sampling must be approved by FNS.

The standard minimum annual state sample sizes range from 300 to 2,400 reviews depending primarily on the size of the monthly participating caseload. States must use the following guidelines when determining their standard annual QC sample sizes:

- If the average monthly caseload is under 10,000, then the standard minimum sample size is 300 cases per year.

- If the average monthly caseload is 60,000 or over, then the standard minimum sample size is 2,400 cases per year.

- If the average monthly caseload is between 10,000 and 60,000, the standard minimum sample size is derived by the following formula:

  Standard minimum = 300 + 0.042 (N - 10,000)
  where N is the average monthly caseload

A state may choose an optional minimum sample size if it agrees not to dispute later payment error rate findings and the associated sanctions on the basis of the precision of the estimates. Optional minimum sample sizes are determined as follows:

- If the average monthly caseload is under 12,942 then the optional minimum sample size is 300.

- If the average monthly caseload is 60,000 or over, then the optional minimum sample size is 1,020.

- If the average monthly caseload is between 12,942 and 60,000, the optional minimum sample size is derived by the following formula:

  Optional minimum = 300 + 0.0153 (N – 12,941)
  where N is the average monthly caseload

C. CREATION OF THE FSPQC DATABASE

We create the FSPQC database from the raw datafile through four steps: (1) preliminary processing, (2) data editing, (3) variable construction, and (4) weighting.

1. Preliminary Processing

We first convert the raw datafile into a SAS file. We then generate and inspect a series of quality control counts and frequency distributions for the values of each variable on the file. We assign missing value codes to data that are out of range, missing from the file, or coded as

unknown on the source file. Certain records are removed from the file because there is too little recorded information available for processing:

- Those coded as not subject to review (REVDISP = 2), incomplete (REVISP = 3), or deselected due to oversampling (REVDISP = 4).

- Those coded with review findings of ineligible (STATUS = 4).

- Those missing all data except error and status information, identified as those coded with zero case members (CERTHHSZ = 0).

In addition, to be consistent with the removal of households the reviewer found to be ineligible, we remove those coded with a review finding of overissuance where the amount of error in the benefit is equal to or exceeds the benefit (i.e. STATUS = 2 and RAWBEN <=AMTERR). These are households that the reviewer found to be eligible but did not qualify for a benefit. Table II.1 shows the number of sample households dropped from the edited file.

TABLE II.1

NUMBER OF CASES SAMPLED, DROPPED FROM THE EDITED FILE, AND
INCLUDED ON THE EDITED FILE, FISCAL YEAR 2004

	Fiscal Year 2004 QC Sample
Number of cases sampled	57,350
Cases not subject to review	3,162
Cases deselected to correct for oversampling	2
Case dropped due to date out of range (FY2005)	1
Cases subject to review	54,185
Incomplete cases	4,109
Cases completed	50,076
Households not eligible for a positive benefit	1,031
Households eligible for a positive benefit	49,045
Households dropped due to inconsistencies	239
Households on the final file	48,806

Source: Fiscal Year 2004 Food Stamp Program Quality Control sample.

9

2. Data Editing

Consistent measures of unit size, income, and benefit level are very important to any analysis of food stamp households. However, data for these measures are inconsistent for a number of records on the raw datafile. For instance, the sum of the income of each person in the unit may not equal reported household-level gross income. Such inconsistencies can be rooted in the initial case record information, the transcription and data entry process, or the extraction of the food stamp information for the selected months. In the data editing step, we look for such inconsistencies in reported data and correct them. For a small number of households, we are unable to resolve the inconsistencies and so drop them from the edited file.

The overall strategy of the editing process is to ensure that certain basic relationships hold for all cases. The two most basic relationships that should hold for the reported program variables are: [4]

- Net income must equal gross income minus the total deductions for which the unit is eligible.

- The food stamp benefit level must equal the maximum benefit for that unit size minus 30 percent of net income.

In addition, several key relationships must hold for some final and intermediate variables. For example:

- Gross unit income must equal the sum of all countable person-level income amounts.

- Earned income deduction must equal the specified percentage (rounded down) of countable earned income for all households.

---

[4] Households participating in the Minnesota Family Investment Program (MFIP) or an SSI Combined Application Project (SSI-CAP) are subject to different eligibility and benefit determination rules and have been edited accordingly.

- Excess shelter deduction must equal shelter costs above 50 percent of gross income minus all other deductions up to a cap. Units that contain elderly or disabled members are not subject to the cap. Units with a homeless deduction will not have an excess shelter deduction.

- Total deductions must equal the sum of the standard deduction, any earned income deduction, medical deduction, excess shelter deduction or homeless deduction, dependent care deduction, and child support expenditure.[5]

The complex process by which the editing program determines whether a case is internally consistent and performs edits if the case is not consistent is described in detail in Chapter III.

3. Variable Construction

We construct a number of variables from the reported data once the file is edited. The major classes of constructed variables are unit-level countable income variables, FSP eligibility and benefit determination variables, and characteristics flags.

- ***Unit-level Countable Income Variables.*** The total FSP unit income variable for each type of income (e.g., TANF, Social Security) is constructed by summing the person-level income of that type over all individuals in the household. The total FSP unit gross income, earned income, and unearned income variables are constructed by summing all the appropriate unit income variables.

- ***FSP Eligibility and Benefit Determination Variables.*** Variables used to determine eligibility and benefits—such as FSP unit deductions, FSP unit net countable income, and FSP unit benefits—are constructed on the basis of household countable income and unit demographic characteristics.

- ***Characteristics Flags.*** Characteristics flags are created to identify units with certain features, such as the presence of an elderly or disabled person. In addition, data from Census files are merged to identify whether a unit resides in a metropolitan, micropolitan, or rural area.[6]

---

[5] In some cases, child support payments are excluded from gross income and not taken as a deduction

[6] A Micropolitan Statistical Area has at least one urban cluster of at least 10,000 but less than 50,000 population and includes adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties.

4. Weighting

We weight the observations on the file so that they replicate the monthly number of FSP units by state, as reflected in the FSP Program Operations data adjusted to eliminate those receiving disaster assistance benefits and those receiving benefits in error. Program Operations figures are derived from FNS' National Data Bank and reflect actual levels of participation and benefit issuance. Information about the number of households receiving a disaster assistance benefit comes from FNS. The rates of households receiving benefits in error are estimated from the raw QC datafile.

D. FINAL FSPQC DATABASE

After we create the FSPQC database, we create a SAS version and two binary versions of the file. The SAS file is used for tabulations of the characteristics of FSP households. One binary file is used to tabulate the characteristics of FSP households with Table Producing Language software, and the other binary file is used as the underlying database for FNS' QC Minimodel.

III. FISCAL YEAR 2004 FSPQC FILE DEVELOPMENT PROCESS

A. DEVELOPING THE FSPQC FILE

The following is a description of the programs and data used in the development of the FY 2004 FSPQC file.[7] The development process is also illustrated in Figure III.1.

Step 1.

The 2004 FNS data was received from FNS on a CD in an ASCII (or text) format.

    INPUT CD: File: FY2004   (ASCII file)
                                     Record length 2,255
                                     57,350 Records

Step 2.

Specified fields from the raw FNS file were converted to SAS format, the unique record identifier HHLDNO was created, and stratum codes were corrected to reflect FNS' updated specifications.

    PROGRAM NAME: SASIFY04.SAS

    INPUT FILE: FY2004   (ASCII, 57,350 Records)

    OUTPUT FILE: QCFY2004_1.SD7   (57,350 Records, 719 Variables)

Step 3.

Preliminary frequencies were run on the SAS file. The frequencies were checked for evidence of data corruption, consistency across areas and months, and the extent of missing and out-of-range data. In addition, means were calculated and compared to those for the previous year.

    PROGRAM NAMES: FREQ04.SAS
                                    FREQ04A.SAS
                                    CMP0304A.SAS

    INPUT FILE: QCFY2004_1.SD7   (57,350 Records, 719 Variables)

---

[7] Copies of the computer programs used are available from FNS upon request.

FIGURE III.1

FISCAL YEAR 2004 FSPQC FILE DEVELOPMENT PROCESS
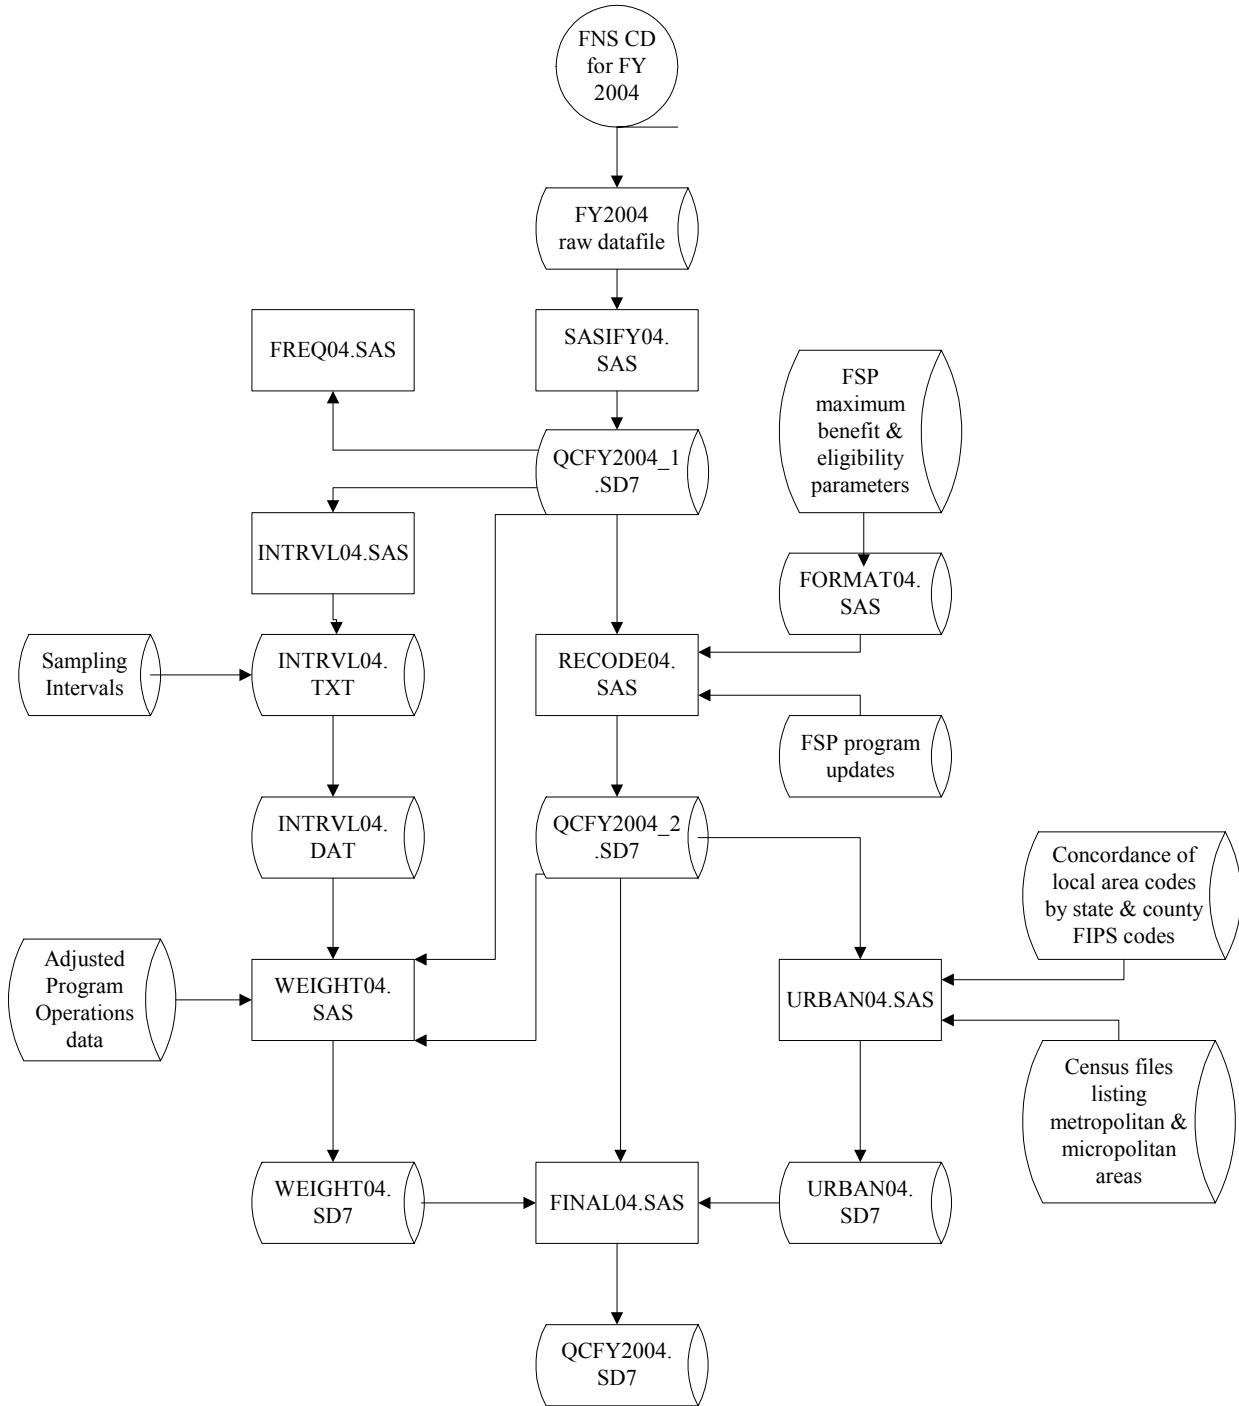

Step 4.

A hand-entered format library containing format values for maximum benefit and income screen was constructed. In FY 2004, information on SUA values by state was included in the format library. This program was used in Step 5.

      OUTPUT PROGRAM: FORMAT04.SAS

Step 5.

An edit program created several unit-level variables pertaining to FSP affiliation, income deductions, shelter limit, benefit amount, assets, poverty status, and specific types of income. Values that were coded as unknown (9-filled or zero where a value should have been entered) were set to missing. Inconsistencies between person-level income totals and reported totals were detected and resolved using a procedure described in detail below (see "Obtaining File Consistency"). Units meeting all the following conditions were written to the output file: (1) had a completed review; (2) were found eligible by the QC reviewer; (3) contained at least one FSP participant under review; (4) received a benefit amount of at least one dollar; and (5) were flagged as categorically eligible, passed the eligibility tests, or were identified as participating in the Minnesota Family Investment Program (MFIP) or in an SSI Combined Application Project (SSI-CAP).

PROGRAM NAME:	RECODE04.SAS	
INPUT FILES:	QCFY2004_01.SD7	(57,350 Records, 719 Variables)
	FORMAT04.SAS	(Format library)
OUTPUT FILES:	QCFY2004_2.SD7	(48,806 Records, 1,102 Variables)
	COMPLETES04.SD7	(50,076 Records, 1,103 Variables)
	DROP04.SD7	(239 Records, 1,104 Variables)

Step 6.

A file was created containing state name, FIPS code, and stratum, with one record per state/stratum combination.

PROGRAM NAME:	INTRVL04.SAS	
INPUT FILES:	QCFY2004_1.SD7	(57,350 Records, 719 Variables)
OUTPUT FILE:	INTRVL04.TXT	(ASCII, 100 Records)

Step 7.

The INTRVL04.TXT file was edited by hand to add interval information (obtained from FNS) for each state/stratum combination. The edited file was saved as INTRVL04.DAT.

INPUT FILE:	INTRVL04.TXT	(ASCII, 100 Records)
OUTPUT FILE:	INTRVL04.DAT	(ASCII, 100 Records)

Step 8.

A weight was calculated for each state/stratum/month combination.

PROGRAM NAME:	WEIGHT04.SAS	
INPUT FILES:	QCFY2004_1.SD7	(57,350 Records, 719 Variables)
	QCFY2004_2.SD7	(48,806 Records, 1,102 Variables)
	INTRVL04.DAT	(ASCII, 100 Records)
	2004_HHS.XLS	(FNS Excel spreadsheet containing participation numbers adjusted for disasters)
	COMPLETES04.SD7	(50,076 Records, 1,103 Variables)
	DROP04.SD7	(239 Records, 1,104 Variables)
OUTPUT FILE:	WEIGHT04.SD7	(991 Records, 19 Variables)

Step 9.

Using the local agency code, a county FIPS code was assigned to each unit on the FSPQC file. Then each unit was merged to the 2003 Census Bureau files of metropolitan and micropolitan areas using state and county codes. Units were flagged as metropolitan or micropolitan depending on their match to one of the Census files; those not found in either file were flagged as rural (except for local codes that were state-wide which were flagged as missing).

PROGRAM NAME:	URBAN04.SAS

INPUT FILES:	QCFY2004_2.SD7	(48,806 Records, 1,102 Variables)
	METRO2.TXT	(ASCII, 1,159 Records, 3 Variables)
		(Census 2003 Metropolitan File)
	MICRO2.TXT	(ASCII, 679 Records, 3 Variables)
		(Census 2003 Micropolitan File)
	FIPS_LAC.TXT	(ASCII, 4,869 Records, 6 Variables)
		(Concordance of local area codes, updated in 2004.)
OUTPUT FILE:	URBAN04.SD7	(48,806 Records, 5 Variables)

Step 10.

The files containing weights and metropolitan/micropolitan/rural flags were merged with the edited FSPQC file, to produce the final FY 2004 FPSQC file.

PROGRAM NAME:	FINAL04.SAS	
INPUT FILES:	QCFY2004_2.SD7	(48,806 Records, 1,102 Variables)
	WEIGHT04.SD7	(991 Records, 19 Variables)
	URBAN04.SD7	(48,806 Records, 5 Variables)
OUTPUT FILE:	QCFY2004.SD7	(48,806 Records, 719 Variables)

Step 11.

Using the final FSPQC SAS file, this step created a hierarchical binary file for the QC Minimodel. Here SAS missing values were coded to negative values.

PROGRAM NAME:	MINIQC04.SAS	
INPUT FILES:	QCFY2004.SD7	(48,806 Records, 719 Variables)
OUTPUT FILE:	MATHPC.BIN	(48,806 Household records, 119,516 Person records)

Step 12.

Using the final FSPQC SAS file, this step created a hierarchical binary file to be used to produce tables with Table Producing Language software. The program also created a codebook for the Table Producing Language software. SAS missing values were coded to negative values. Additional household level recodes were created for use in table generation.

PROGRAM NAME:	QC2TPL04.SAS	
INPUT FILES:	QCFY2004.SD7	(48,806 Records, 719 Variables)

OUTPUT FILE: QC2TPL04.BIN   (48,806 Household records, 119,516
                                                Person records)

                            QC2TPL04.CBK

B. OBTAINING FILE CONSISTENCY

To obtain the highest possible degree of consistency between related variables in the data, while at the same time maintaining the integrity of the database, it is necessary to perform selected editing of the reported data. The following is a brief outline of the procedures used to obtain file consistency. The exception is for households in Minnesota participating in the Minnesota Family Investment Program (MFIP) and for households participating in SSI Combined Application Projects (SSI-CAP) in Mississippi, New York, South Carolina, Texas, or Washington. The editing procedures for MFIP and SSI-CAP households are outlined after the general procedure. For more detail, please refer to the RECODE04.SAS program and to Appendix B for information on specific data cleaning issues.

1. Standard Editing Procedures

   1. Eliminate households that are incomplete or do not qualify for a benefit.

   - Those with incomplete reviews (REVDISP not equal to 1)

   - Those with no case members (CERTHHSZ = 0)

   - Those found ineligible by the QC reviewer (STATUS = 4)

   - Those with an overissuance that is equal to the issued benefit (STATUS = 2 and RAWBEN <= AMTERR)

   2. Get a preliminary count of the number of people in the household

   3. Recode missing information to SAS missing values:

   - Any field coded with a value that is out of range is set to missing value of .A (e.g. a zero in the food stamp case affiliation code)

18

- Any field coded as unknown (filled with 9's) is set to missing value of .B. The one exception to this rule is the food stamp case affiliation code (FSAFILi) where the 9's remain to signify a valid person.

- Any constructed field that can not be determined because of missing values is set to missing value of .C (e.g., total assets)

- For households participating in months for which they are not certified, CERTMTH is set to missing value of .D

- For MFIP and SSI-CAP households, variables that are not relevant in the benefit determination are set to missing value of .E

4. ***Finalize the unit size.*** We use the food stamp case affiliation flags for each person in the unit to construct a measure of the number of members in the food stamp unit under review. A person is considered to be in the food stamp unit if their affiliation code (FSAFILi) is equal to 1.

5. ***Determine unit totals and flags for elderly individuals, households with disabled nonelderly individuals, number of children, etc.***

6. ***Initialize FY 2004 values (e.g., standard deduction, shelter cap, maximum benefit).***

7. ***Accumulate earned and unearned incomes for those inside the unit and others in the household by adding up person-level income amounts.***

- Earned income variables are wages (WAGESi), self-employment income (SLFEMPi), and other earned income (OTHERNi).

- Unearned income variables are contribution (CONTi), court-ordered child support payments (CSUPRTi), deemed income (DEEMi), state diversion payments (DIVERi), educational grants/scholarhips/loans (EDLOANi), energy assistance income (ENERGYi), state general assistance (GAi), other government benefits (OTHGOVi), other unearned income (OTHUNi), Social Security income (SOCSECi), Supplemental Security Income (SSIi), Temporary Assistance to Needy Families (TANFi), unemployment compensation (UNEMPi), veterans benefits (VETi), worker's compensation (WCOMPi), and subsidized earned income (WGESUPi).

8. ***Reconcile reported person-level income amounts with reported unit-level income and deduction variables.*** All household members (not just unit members) are initially considered in the process of reconciling person-level and unit-level income. Any person-level income amount that is found to not count toward the benefit calculation is then set to zero. To reconcile any differences between the person-level and unit-level income amounts, we perform the following steps:

- ***Does the sum of person-level income match the unit-level gross income?*** Compare earned and unearned income for the unit and the household to see if any combination is equal to the reported unit-level gross income. Check in this order: 1) all unit income; 2) all unit income plus unearned income from outside the unit; 3) all unit income plus earned income from outside the unit; 4) all household income.[8] At each stage, check to see if child support expenses have been excluded from the unit-level gross income.[9] If person-level sums and the unit-level gross income are equal at any stage, then set any income not used to zero.

- ***Does the sum of person-level unearned income and earnings implied by earnings deduction match the unit-level gross income?*** If unit and person-level incomes are inconsistent, compare unearned income for the unit and the household plus the amount of earnings implied by the reported earnings deduction with the reported unit-level gross income to see if any combination is equal. Check in this order: 1) unit unearned income; 2) household unearned income. At each stage, check to see if child support expenses have been excluded from the unit-level gross income. If reconciliation is made, then adjust earnings to satisfy the earnings deduction (adjusting existing earnings proportionately, or if no person-level earnings, adding to householder's other earned income). Set all other income to zero.

- ***Was gross income not recorded?*** If unit and person-level incomes are inconsistent and if the reported unit-level gross income is zero and the benefit is less than the maximum benefit for a unit of this size, set the unit-level gross to the sum of the person-level income values for the household.

- ***Is benefit consistent with having no income?*** If unit and person-level incomes are inconsistent and if the reported unit-level gross income is zero and the benefit is equal to the maximum benefit for a unit of this size, set person-level income values for the household to zero.

- ***Is gross income too high to trust?*** If unit and person-level incomes are inconsistent and if the reported unit-level gross income is out of range (i.e., greater than three times the net income screen for a unit of this size) and no person-level income value is out of range, set the unit-level gross income to the sum of the person-level income values for the household.

- ***Is person-level income consistent with deductions and unit-level net income?*** If unit and person-level incomes are inconsistent, compare combinations of earned and unearned income for the unit and the household less calculated total deductions to the unit-level net income. The calculated total deductions vary

---

[8] 'Unit' income is income associated with participating household members. We allow a $5 difference to account for potential rounding differences.

[9] The Farm Security and Rural Investment Act of 2002 allows child support expenses to be excluded from gross income rather than counted as a deduction.

for each combination because the shelter deduction depends on the household income and the earnings deduction depends on the total earnings. Check in this order: 1) all unit income less total deductions; 2) all unit income plus unearned income from outside the unit less total deductions; 3) all unit income plus earned income from outside the unit less total deductions; 4) all household income less total deductions. If reconciliation is made, then set any income types not used to zero and recalculate unit-level gross income.

- ***Is person-level unearned income and earnings implied by earnings deduction consistent with deductions and unit-level net income?*** If unit and person-level incomes are inconsistent, compare unearned income for the unit and the household plus the amount of earnings implied by the reported earnings deduction to see if any combination equals the reported unit-level net income plus calculated total deductions. Check in this order: 1) unit unearned income; 2) household unearned income. If reconciliation is made, adjust earnings to satisfy the earnings deduction (adjusting existing earnings proportionately, or if no person-level earnings, adding to householder's other earned income); set any income types not used to zero.

- ***Do unit-level income values agree with no errors reported?*** If unit and person-level incomes are inconsistent and no errors are reported (AMTERR = 0) and the unit-level income values agree (gross = net + total deductions), then adjust the person-level income to agree with the unit-level values: adjust person-level earnings proportionately to agree with the earnings deductions; if any further adjustments necessary, then adjust person-level unearned income values proportionately.

- ***Do earnings agree with the reported earned income deduction, but exceed the reported unit-level gross?*** If unit and person-level incomes are inconsistent and earnings agree with the reported earned income deduction but are larger than the unit-level reported gross income, recalculate the gross income, setting to zero any person-level income not used: 1) if unit earnings agree, set all income outside the unit to zero; 2) if household earnings agree, set any unearned income outside the unit to zero.

- ***Are person-level and unit-level incomes still inconsistent?*** If we still have not resolved incomes, make the person-level incomes equal the reported unit-level gross income. If the reported earned income deduction indicates zero earnings, then set to zero any person-level earnings present; if the reported earned income deduction indicates earnings that are not greater than the reported gross income, adjust person-level earnings proportionately to satisfy the earned income deduction; otherwise, adjust all person-level earnings proportionately. If additional adjustments necessary, then adjust all person-level unearned income values proportionately.

9. ***Calculate final household income totals (gross, net, TANF, SSI, etc).*** Drop any household with a gross income greater than 3 times the poverty limit.

10. ***Create remaining flags and variables.***

11. Calculate the benefit.

12. If calculated benefit does not match raw benefit, adjust dependent care deduction or excess shelter deduction if doing so results in a matching benefit. In some households, we are able to reconcile initial differences between the calculated benefit and the raw benefit. To do so, we perform the following steps:

- ***Does the calculated benefit initially match the raw benefit?*** If a household meets one of the following conditions, define it as having a matching benefit: 1) QC reviewers discovered no errors in the benefit allotment and the calculated benefit is within $25 of the raw benefit, or 2) QC reviewers discovered overpayment or underpayment errors and the calculated benefit is within $5 of the raw benefit adjusted for the amount of payment error (the $5 allows for rounding differences). If QC reviewers discovered overpayment or underpayment errors, the calculated benefit is within $5 of the raw benefit when it is not adjusted for the reported error amount, and the error element is not indicated to be the dependent care deduction, the shelter deduction, or the standard utility allowance, exclude the household from benefit reconciliation. For each condition, check with and without allotment adjustments.

- ***Does adjusting the dependent care deduction result in a matching benefit?*** If a household has a nonmatching benefit and a dependent care deduction that is not consistent with dependent care costs, make the deduction match the expenses, up to the maximums allowed, if as a result of doing so, one of the following conditions is met:

  1) The difference between the calculated benefit and the raw benefit adjusted for any overpayment or underpayment errors is equal to or less than $5

  2) QC reviewers found no errors in the benefit allotment AND the difference between the calculated benefit and the raw benefit is equal to or less than $25 AND the difference between the calculated net income and the raw net income is equal to or less than $5.

  For each condition, check with and without allotment adjustments.

- ***Does adjusting the shelter deduction result in a matching benefit?*** If a household has a nonmatching benefit, try setting the amount of utility expenses equal to a Standard Utility Allowance (SUA) amount or to $0.[10] Try different

---

[10] Standard Utility Allowances (SUAs) are standardized utility figures states offer to households applying for food stamps. They are used in place of actual utility costs to calculate a household's total shelter expenses. Many states employ more than one SUA to accommodate households with different types of utility expenses. An HCSUA is an SUA used for households with heating and cooling expenses not included in rent. An HCSUA generally includes all utilities, including telephone. An LUA is an SUA used for households that do not have heating and cooling expenses separate from rent. An LUA generally includes all utilities, including

SUA amounts in the following order: (1) HCSUA, (2) LUA, (3) utilities equal $0, (4) telephone allowance, (5) another type of SUA. Set the amount of utility expenses equal to an SUA amount or to $0 if, as a result, one of the following four conditions is met:

1) The difference between the calculated benefit and the raw benefit adjusted for any overpayment or underpayment errors is equal to or less than $5

2) QC reviewers found no errors in the benefit allotment AND the difference between the calculated benefit and the raw benefit is equal to or less than $25 AND the difference between the calculated net income and the raw net income is equal to or less than $5

3) QC reviewers found no errors in the benefit allotment AND the difference between the calculated benefit and the raw benefit is equal to or less than $25 AND the difference between the calculated shelter deduction and the raw shelter deduction is equal to or less than $5

4) In New York: QC reviewers found no errors in the benefit allotment AND the difference between the calculated benefit and the raw benefit is equal to or less than $25 if utilities are set equal to the HCSUA AND SUA1 indicates that an HCSUA was used.[11]

For each condition, check with and without allotment adjustments. See Appendix F for FY 2004 SUA values by state.

13. Drop households where the calculated benefit is less than 1.

14. Perform automated edits to reconcile remaining inconsistencies. See Appendix B for details.

15. Determine eligibility. Perform the asset and income tests on every household that is not categorically eligible. Retain only the households that are eligible.

(continued)
telephone. A telephone allowance is an SUA used for households that have telephone expenses but do not have any other utility expenses. In addition, a few states use individual standards for different utility expenses. Hawaii, for example, employs individual utility standards for electricity/gas, telephone, sewage/trash, and water.

[11] New York QC reviewers failed to record the utility amount in the QC Review Schedule significantly more often than QC reviewers in other states. It is our understanding that the computer system in New York automatically generates the utility allowance for certain households, which may explain why utility amounts are so frequently not recorded. Consequently, we do not require a matching net income or a matching shelter deduction in New York households, as long as SUA1 (the variable indicating usage of and entitlement to SUAs) indicates that an HCSUA was used.

- Households without an elderly or disabled member must have a monthly gross income that is at or below 130 percent of the poverty guideline (Appendix F).

- Households must have a net monthly income at or below 100 percent of the poverty guideline (Appendix F).[12]

- Households without an elderly or disabled member must have total assets of $2,000 or less. Households with an elderly or disabled member are allowed up to $3,000 in assets. (See next section for exceptions.)

2. State Variations to Editing Procedures

a. Asset Limits

In Montana, all households are allowed up to $3,000 in countable assets, and in Texas, all households may have up to $5,000 in countable assets.

b. Minnesota

In Minnesota, the benefit calculation for participants in the Family Investment Program (MFIP) differs from the federal formula. In the following section, we describe MFIP and show how we identify MFIP participants, reconcile their income, and calculate their benefits.

MFIP is Minnesota's TANF program. Participants in MFIP have their FSP and MFIP benefit calculated together. A household's total income is separated into earned and unearned income (not counting TANF income) and a 36 percent earnings deduction is applied to the earned income. These incomes are subtracted from an income threshold, which is higher for households with earned income. The resulting difference is compared to a maximum benefit threshold. If the income difference is larger than the benefit threshold for the food portion then the household receives the full food portion and some or all of the cash portion as well. If the income difference is smaller than the food portion threshold, the household receives the income

---

[12] This test is not performed on households identified as participating in the Minnesota Family Investment Program (MFIP) and households participating in SSI Combined Application Projects (SSI-CAP) in Mississippi, New York, South Carolina, or Texas.

difference as its food portion (see www.revisor.leg.state.mn.us/stats/256J/24.html for more information). MFIP households receive no income deductions other than the earnings deduction.

We describe the calculation of the food portion of the benefit and differences in the general editing procedures that reconcile household-level income with person-level income below. (See Appendix F for FY 2004 cash and food portion values.) Note that we do not calculate the TANF benefit (the cash portion) after we calculate the food portion. Instead, we use the reported TANF benefit (which may have been adjusted when we reconciled the person-level and household-level incomes).

1. ***Flag households that are MFIP participants.*** Knowing that not all MFIP participants receive a cash benefit, we first attempt to identify MFIP-participating households. We flag any household in Minnesota as an MFIP participant if it has one of the following characteristics:[13]

   - Any person-level TANF income for FSP unit members

   - Children in the unit and the benefit, adjusted for errors, is the same as the Minnesota table of benefits for this unit size

   - Children in the unit, positive person-level earnings, and a positive reported earned income deduction, where the reported earned income deduction is 38 percent of the person-level earnings

2. ***Reconcile reported person-level income amounts with reported unit-level income and deduction variables.*** The procedure to reconcile person-level income amounts with unit-level income and deductions is the same as for all other households with the following exceptions:

   - We begin trying to reconcile person-level income to unit-level gross income with TANF excluded from unearned income. At each step in reconciling to unit-level gross income described above, if person-level incomes with TANF excluded do not equal the unit-level gross, we try including TANF income to

_____

[13] MFIP has different unit composition rules than the regular FSP. Specifically, SSI and TANF recipients living in the same household are treated as separate FSP units. Consequently, if a Minnesota unit of more than one person had both SSI and TANF income, we set the affiliation code of the SSI recipient to unknown (99). This affected three households.

see if adding in TANF allows us to reconcile to unit-level gross.[14] The final calculated gross income includes any TANF income initially included on the raw datafile.

- We do not attempt to reconcile person-level income with reported unit-level net income for MFIP participants since net income is not used in the same way for the MFIP benefit as it is in the federal program. The calculated net income variable is coded as missing for all MFIP households.

3. ***Earned income deduction.*** For MFIP households we calculate the earned income deduction as 36 percent of earnings.

4. ***Final deductions.*** All deductions except for the earned income deduction and total deduction are coded as missing for MFIP participants.

5. ***Benefit calculation.*** Using input tables organized by unit size and calculated unit income values, we initialize the following values:

- The food portion of the benefit (MN_FOOD_PORTION)

- The cash portion of the benefit (MN_CASH_PORTION)

- The transitional standard (MN_TRANSITIONAL_STANDARD)

- The family wage level (MN_FAM_WAGE_LEVEL)

- The net earnings (NET_EARN = FSEARN - FSERNDED)

- The net unearned income (NET_UNEARN = FSUNEARN - FSTANF)

Then, we determine the benefit depending on the unit characteristics:

- If the unit has no income, then the benefit is the food portion

    FSBEN = MN_FOOD_PORTION

---

[14] Since the cash portion of the benefit is calculated at the same time as the food portion of the benefit, we do not expect to see TANF included in the total gross income for the household. However, in some household records, we did see the TANF included and accepted that as verification that the recorded gross income was correct.

- If the unit has only earned income, then the benefit is the minimum of the food portion and the difference between the family wage level and the net earnings, but never less than zero.

  EARN_DIFF = MN_FAM_WAGE_LEVEL - NET_EARN

  FSBEN = MAX(0, MIN(MN_FOOD_PORTION, EARN_DIFF))

- If the unit has only unearned income, then the benefit is the minimum of the food portion and the difference between the transitional standard and the net unearned income, but never less than zero.

  UNEARN_DIFF = MN_TRANSITIONAL_STANDARD - NET_UNEARN

  FSBEN = MAX(0, MIN(MN_FOOD_PORTION, UNEARN_DIFF))

- If the unit has both earned and unearned income then we subtract net earned income from the family wage level and compare the difference to the transitional standard. We then subtract unearned income from the smaller of the two (to ensure the wages were high enough to merit the full increase to the family wage level) and compare that difference to maximum food portion.

  EARN_DIFF = SUM(MN_FAM_WAGE_LEVEL, -NET_EARN)

  INTER_INC = MIN(MN_TRANSITIONAL_STANDARD, EARN_DIFF)

  UNEARN_DIFF = SUM(INTER_INC, -NET_UNEARN)

  FSBEN = MAX(0, MIN(MN_FOOD_PORTION, UNEARN_DIFF))

c. **SSI-CAP Households**

In FY 2004, five states—Mississippi, New York, South Carolina, Texas, and Washington— had Combined Application Project (CAP) demonstrations, which are joint FNS-SSA partnerships with a goal of streamlining the procedures for providing food stamp benefits to certain households that are eligible for both food stamps and Supplemental Security Income (SSI). In this section, we briefly describe the five programs and our procedures for identifying and editing these households for the FSPQC database.

The Mississippi Combined Application Project (MSCAP) is open to one-person SSI households with no earned income. The program has four standard benefit amounts: households with SSI only and those with SSI and other unearned income each have two benefit levels

determined by their level of shelter costs.[15] We describe our process for identifying, recoding, and assigning benefits for MSCAP households below.

1. ***Identifying MSCAP households.*** When coding MSCAP households, QC reviewers attempted to work backwards from the standardized benefit to make income and deductions consistent with the benefit for MSCAP participants. In a majority of potential MSCAP households, the gross income equals either the maximum SSI benefit for eligible individuals or the maximum SSI benefit plus $20, reflecting the $20 unearned income disregard for SSI. When these gross incomes are used in conjunction with the standard deduction and MSCAP Standard Utility Allowances (SUA), the resulting net income is consistent with one of the standardized MSCAP benefits. Additional households follow the same pattern closely but not exactly (See Appendix F for MSCAP benefits and income patterns). We flag as MSCAP participants one-person households with SSI income and no earnings if one of the following conditions is true:

   - The recorded benefit equals an MSCAP standardized benefit and the recorded gross income or recorded net income is consistent with that benefit according to the pattern followed in most households (allows the recorded utility amount to be inconsistent).[16]

   - The recorded benefit equals an MSCAP standardized benefit and the recorded utility amount equals an MSCAP SUA (allows the recorded gross and net income to be inconsistent).

   - The recorded utility amount equals an MSCAP SUA and recorded gross income or recorded net income equals one of the income amounts consistent with the pattern (allows the benefit to be inconsistent).[17]

2. ***Recodes for MSCAP households.*** We perform the following recodes for households identified as MSCAP participants:

---

[15] The benefit amounts are updated in January of each year, so MSCAP households in the FY 2004 FSPQC datafile are assigned one of eight standard benefit amounts.

[16] If the recorded benefit equals $10, we require both gross income *and* net income to be consistent with the pattern.

[17] Because very few MSCAP-eligible households have allotment adjustments, we do not check for households where the recorded benefit plus or minus the allotment adjustment would equal an MSCAP standardized benefit.

- *Shelter Expenses*: QC reviewers recorded the utility expenses of most MSCAP participants as the standard MSCAP utility allowance. For households where this was not the case, we recode the utility expense values (UTIL). In addition to a utility expense, some QC reviewers recorded a rent/mortgage value (RENT) for MSCAP households. We recode these values as $0. Since the MSCAP SUA reflects combined shelter expenses (including rent/mortgage), we would account for rent/mortgage twice if we included the recorded rent/mortgage values in our calculation of combined shelter expenses.

- *Deductions*: Because deductions are not used in the MSCAP benefit determination, they do not carry the same meaning for MSCAP households as they do for households in the federal program. Consequently, we code all the calculated deduction variables as missing.

- *Income*: In most MSCAP households, the raw gross income equals either the maximum SSI benefit for eligible individuals or the maximum SSI benefit plus $20, reflecting the $20 unearned income disregard for SSI. We recode the calculated gross income (FSGRINC) of MSCAP households that do not follow this pattern. Since a net income for MSCAP households would not reflect the full range of expenses and deductions that are used to calculate net income for regular FSP households and since MSCAP standard benefits do not depend on net income, we code the calculated net income (FSNETINC) as missing. We make the sum of individual incomes equal the calculated gross income (FSGRINC) by adjusting individual incomes proportionately, as necessary.

3. **Benefit calculation for MSCAP households.** In most MSCAP households, we set the calculated food stamp benefit (FSBEN) equal to the raw benefit adjusted for allotment errors (which equals a standard MSCAP benefit). However, if two or more shelter and income variables (e.g. utilities and gross income or utilities and net income) are consistent with another standard benefit, we set the calculated benefit equal to the benefit that is consistent with the shelter and income information.[18]

Similar to MSCAP, the South Carolina Combined Application Project (SCCAP) is open to one-person SSI households with no earned income. The program has four standard benefit amounts: households with SSI only and those with SSI and other unearned income each have

---

[18] When the recorded income and shelter expenses are consistent with each other and lead to a different benefit than the recorded benefit, we choose to trust the recorded income and utilities. If a recorded benefit is within $25 of the correct benefit, we expect the QC reviewer to code the correct income and deductions, but the issued (and incorrect) benefit. So, by trusting the income and deductions over the benefit, we are trusting the reviewer coded the household correctly.

two benefit levels determined by their level of shelter costs.[19] We describe our process for

identifying, recoding, and assigning benefits for SCCAP households below.

1. ***Identifying SCCAP households.*** As in Mississippi, QC reviewers in South Carolina attempted to work backwards from the standardized benefit to make income and deductions consistent with the benefit for SCCAP participants. A majority of potential SCCAP households follow a consistent pattern in terms of income and recorded shelter expenses. Additional households follow the same pattern closely but not exactly (See Appendix F for SCCAP benefits and income patterns). We flag as SCCAP participants one-person households with SSI income and no earnings if one of the following conditions is true:

- The recorded benefit equals an SCCAP standardized benefit and the recorded gross income or recorded net income is consistent with that benefit according to the pattern followed in most households (allows the recorded rent/mortgage amount to be inconsistent)[20]

- The recorded benefit equals an SCCAP standardized benefit and the recorded rent/mortgage amount equals the standard rent/mortgage amount used for SCCAP participants (allows the recorded gross and net income to be inconsistent)[21]

- The recorded rent/mortgage amount equals the standard rent/mortgage amount used for SCCAP participants and recorded gross income or recorded net income equals one of the income amounts consistent with the pattern (allows the benefit to be inconsistent).[22]

2. ***Recodes for SCCAP households.*** We perform the following recodes for households identified as SCCAP participants:

---

[19] The benefit amounts are updated in January of each year, so SCCAP households in the FY 2004 FSPQC datafile are assigned one of eight standard benefit amounts.

[20] If the recorded benefit equals $10, we require that both gross income *and* net income are consistent with the pattern.

[21] Because the SUA used for SCCAP households is identical to the SUA used for South Carolina households participating in the regular FSP, it cannot be used to identify potential SCCAP households. However, unlike the regular FSP, SCCAP uses standard rent/mortgage values, which we can use to identify potential SCCAP participants.

[22] Because very few SCCAP eligible households have allotment adjustments, we do not check for households where the recorded benefit plus or minus the allotment adjustment would equal an SCCAP standardized benefit.

- **Shelter Expenses**: For most SCCAP participants, QC reviewers recorded the utility expense value as the South Carolina HCSUA value and rent/mortgage as the standard SCCAP rent amount. We recode utilities (UTIL) and rent/mortgage (RENT) for SCCAP households that are not following this pattern.

- **Deductions**: Because deductions are not used in the SCCAP benefit determination, the deduction variables do not carry the same meaning for SCCAP households as they do for households participating in the regular FSP. Consequently, we code all the calculated deduction variables as missing.

- **Income**: In most SCCAP households, gross income equals either the maximum SSI benefit for eligible individuals or the maximum SSI benefit plus $20, reflecting the $20 unearned income disregard for SSI. We recode the calculated gross income (FSGRINC) of SCCAP households that do not follow this pattern. Since a net income for SCCAP households would not reflect the full range of expenses and deductions that are used to calculate net income for regular FSP households and since SCCAP standardized benefits do not depend on net income, we code the calculated net income (FSNETINC) as missing. We make the sum of individual incomes equal the calculated gross income (FSGRINC) by adjusting individual incomes proportionately as necessary.

3. **Benefit calculation for SCCAP households.** In most SCCAP households, we set the calculated food stamp benefit (FSBEN) equal to the raw benefit adjusted for allotment errors. However, if two or more shelter and income variables (e.g. rent and gross income or rent and net income) are consistent with another standardized benefit, we set the calculated benefit equal to the benefit that is consistent with the shelter and income information.[23]

The Texas Simplified Nutritional Assistance Program (TXSNAP) is limited to SSI recipients 65 and older who are not currently receiving food stamps. Participants may have other income (either earned or unearned) in addition to SSI. Married couples can participate but are treated as separate households. The program only has two standardized benefits that depend on the level of

---

[23] When the recorded income and shelter expenses are consistent with each other and lead to a different benefit than the recorded benefit, we choose to trust the recorded income and utilities. If a recorded benefit is within $25 of the correct benefit, we expect the QC reviewer to have coded the correct income and deductions and the issued (and incorrect) benefit. So, by trusting the income and deductions over the benefit, we are trusting the reviewer coded the household correctly.

total shelter expenses (Appendix F). We describe our process for identifying, recoding, and assigning benefits for TXSNAP households below.

1. ***Identifying TXSNAP households.*** We identify as TXSNAP participants all households with SSI income, at least one person coded as an FSP participant age 65 or older, and a recorded benefit equal to one of the TXSNAP standardized benefit amounts.

2. ***Recodes for TXSNAP households.*** We perform the following recodes for households identified as TXSNAP participants:

   - ***Food Stamp Program Participation and Unit Size***: According to TXSNAP rules, married couples can participate in the program, but they are treated as separate households. The QC data include some TXSNAP households with married couples and a TXSNAP standardized benefit where both partners are age 65 or older and both are coded as FSP participants. In these households, we let the first SSI-recipient age 65 or older retain his or her status as an eligible member of the food stamp case under review and entitled to receive benefits (FSAFILi=1). For any additional persons originally coded as FSP participants, we added a new code "Eligible FSP participant in another unit, not currently under review" (FSAFILi=2). We adjust the variable indicating unit size accordingly (FSUSIZE).

   - ***Deductions***: Because deductions are not used to determine the benefit for TXSNAP households, they do not carry the same meaning for TXSNAP households as they do for regular FSP households. Consequently, we code all the calculated deduction variables as missing.

   - ***Income***: In TXSNAP households that originally had more than one individual coded as an FSP participant, we set gross income (FSGRINC) equal to the sum of the individual incomes assigned to the one individual who remains an FSP participant (FSAFILi=1) after the rest have been assigned new status as participants outside the unit (FSAFILi=2). In other TXSNAP households, we reconcile individual incomes with the gross income. Since TXSNAP standardized benefits do not depend on net income, we code the calculated net income (FSNETINC) as missing.

3. ***Benefit calculation for TXSNAP households.*** TXSNAP has two standardized benefits determined by the level of shelter expenses. In about one third of TXSNAP households, the recorded benefit is not consistent with the level of the recorded shelter expenses. However, because these errors are roughly evenly divided in both directions, we calculate the final food stamp benefit based on the recorded shelter expenses. If combined shelter expenses are equal to or exceed $289, we assign a food

stamp benefit of $46, and if combined shelter expenses are below this threshold, we assign a food stamp benefit of $35.[24]

The Washington Combined Application Project (WASHCAP) is open to one-person SSI households with no earned income. Unlike the other four SSI-CAP demonstrations, WASHCAP does not use standardized benefit amounts. The benefits are calculated based on actual income, the standard deduction, and the shelter deduction based on a standardized rent/mortgage amount and a standard utility allowance (SUA) (Appendix F). We describe our process for identifying and recoding WASHCAP households below.

1. ***Identifying WASHCAP households.*** The QC data include two potential markers of WASHCAP participants. One of these is the standardized rent/mortgage allowance.[25] An additional marker is a special local agency code used by QC reviewers for WASHCAP households whose applications were processed in an SSA office. Using these two markers, we identify as WASHCAP participants all one-person households with SSI income and no earnings if the recorded rent/mortgage amount equals the WASHCAP standardized rent/mortgage allowance or if the local agency code is the code used for WASHCAP participants.

2. ***Recodes for WASHCAP households.*** We perform the following recodes for households identified as WASHCAP participants:

   - ***Shelter Expenses***: When necessary, we recode utilities of WASHCAP households (UTIL) to equal the Washington HCSUA for one-person households and rent/mortgage (RENT) to equal one of the standard rent amounts.

---

[24] Because the two TXSNAP standardized benefits are within $25 of each other, we expect the QC reviewer to have coded the correct expense information and the issued (and incorrect) benefit. So, by trusting the expense information over the benefit, we are trusting the reviewer coded the household correctly.

[25] Because the SUA used for WASHCAP households is identical to the SUA used for one-person households participating in the regular FSP in Washington ($287), it cannot be used to identify potential WASHCAP households. However, unlike the regular FSP, WASHCAP uses standard rent/mortgage values, which we can use to identify potential WASHCAP households ($155 for households with actual rent/mortgage less than $302 and $321 for households with actual rent/mortgage equal to or greater than $302).

- *Deductions*: The deductions that are not used in calculating the WASHCAP benefit do not carry the same meaning as deductions for non-CAP households. Consequently, we code the dependent care deduction (FSDEPDED), earnings deduction (FSERNDED), medical deduction (FSMEDDED), and homeless deduction (HOMELESS_DED) as missing.

- *Incomes*: We reconcile individual incomes with the gross income in WASHCAP households using the same process as in non-CAP households.

3. Benefit calculation for WASHCAP households. We use the regular benefit calculator.

The New York State Nutrition Improvement Project (NYSNIP) is limited to one-person SSI households. NYSNIP has 30 standardized benefit categories that vary by region, shelter costs, eligibility for an SUA, and receipt of income other than SSI (Appendix F). The certification period for NYSNIP is four years with interim contact at the end of two years. We describe our process for identifying, recoding, and assigning benefits for NYSNIP households below.

1. *Identifying NYSNIP households.* We identify one-person households that receive SSI income and belong to one of the following groups as NYSNIP participants:[26,27]

   - Households whose recorded benefit matches an NYSNIP benefit and the benefit amount is consistent with the presence of income other than SSI in the household.

   - Households whose certification period is longer than two years.

---

[26] In the other four CAP states, we define "one-person households" as households with unit size one, allowing for the possibility of other individuals living in the same household. Because New York's coding system to identify individuals living alone is more refined than in the other states and is able to eliminate SSI shared living situations, we define "one-person households" in New York as households with only one person in the food stamp unit and no additional persons outside the unit.

[27] Because very few NYSNIP eligible households have allotment adjustments, we do not check for households where the recorded benefit plus or minus the allotment adjustment would equal an NYSNIP standardized benefit.

- Households whose recorded benefit does not match an NYSNIP benefit if the recorded benefit is less than their benefit would be under NYSNIP rules.[28]

2. **Recodes for NYSNIP households.** We perform the following recodes for households identified as NYSNIP participants:

- **Deductions**: Because deductions are not used to determine the benefit for NYSNIP households, they do not carry the same meaning as they do for regular FSP households. Consequently, we code all the calculated deductions as missing.

- **Incomes**: We reconcile individual incomes with the gross income (FSGRINC). Since NYSNIP standardized benefits do not depend on net income, we code the calculated net income (FSNETINC) as missing.

3. **Benefit calculation for NYSNIP households.** For NYSNIP households with a recorded benefit that matches an NYSNIP benefit, we set the calculated benefit (FSBEN) equal to the recorded benefit. For NYSNIP households with a recorded benefit that does not match an NYSNIP benefit, we calculate the benefit based on NYSNIP rules.

C. DERIVATION OF SAMPLING WEIGHTS

The FSPQC file contains two weight variables: (1) the monthly weight (HWGT) and (2) the full-year weight (FYWGT). HWGT is the monthly weight used to replicate the monthly caseload amounts as reflected in Food Stamp Program Operations data. FYWGT is HWGT/12 and can be used to perform full-year tabulations on the FSPQC data.

The tables in Appendix D show the original monthly weights (HWGT) and their derivation for each state and stratum. We begin with the administrative counts of participants by state (Program Operations data) and adjust them for disaster assistance and households receiving benefits in error, since both groups are included in the Program Operations data but are no longer included in the FSPQC data. We weight the households on the file using these five major steps:

---

[28] Although these households were probably not NYSNIP participants at the time of the QC review, the expectation is that they would have been converted by the end of FY 2004.

1. In states with major disasters, we lower the Program Operations counts in the month(s) of the disaster by the number of households receiving benefits specifically because of the disaster (not already participating households who receive additional benefits). (Column e)

2. For the states with stratified samples, we apportion the adjusted Program Operations counts across the strata according to the percentage of the sample that is in that stratum in that month. (Column f)

3. We calculate the error rate by state and stratum by removing all households the reviews found "ineligible" (coded as STATUS = 4), as well as those the reviewers found "eligible" but not qualifying for a benefit (coded as STATUS = 2 with the benefit error amount equal to the full benefit). The number of removed households divided by the number of households with completed reviews is our "disqualification" rate.[29] (Column i)

4. We remove any additional households that do not appear to be eligible for the FSP either because they do not pass a test and are not categorically eligible or because they do not qualify for a benefit.[30] (Column k)

5. We calculate the weight for each household by state and stratum by dividing the final adjusted Program Operations count by the remaining number of households on the file. (Column m)

The second weight variable, FYWGT, was created in order to do full-year calculations on the data. FYWGT is created by dividing HWGT by the number of months in a fiscal year. Therefore, FYWGT is simply HWGT/12.

---

[29] The disqualification rate differs from FNS' error rate in that the disqualification rate includes only those households that received benefits but were found by the review to fail one of the income or asset tests or were found to pass the tests but not to qualify to receive a benefit. FNS' error rate includes those that received benefits but are found to not pass one of the tests, receive too much in benefits (which includes those that pass the tests but did not qualify for a benefit), and those who receive too little in benefits.

[30] For the purposes of the QC Minimodel, we cannot keep these households on the file. However, they do not affect the error rates or the total number of weighted households.

IV. DEVELOPMENT OF THE 2004 QC MINIMODEL

The QC Minimodel uses a series of algorithms to simulate eligibility, benefits, and participation in the FSP. Together, these algorithms comprise the Food Stamp Module (FSTAMP). Some of the algorithms in the FSTAMP module are specific to the input data source (CPS, SIPP, or QC), while others are database-independent. This chapter provides a technical description of the procedures used to transform data elements from the FSPQC database into the data elements required as input to the database-independent algorithms of FSTAMP. It also documents the algorithms that are specific to the FSPQC database. The database-independent algorithms are documented in the *1999 MATH SIPP Programmer's Guide, Technical Description, and Codebook* (Bloom et al 2003).

A. CREATE MATH-STYLE VERSION OF FSPQC DATABASE

1. Introduction

The QC Minimodel requires a standard binary file in a particular format (MATH[31] style) as input. This section describes the procedure used to create the binary file from the SAS version of the FSPQC database. A two-step process is required to generate the final binary file in the MATH format: 1) create a binary file from the SAS dataset, and 2) run a tally using the binary file from step 1 to finalize the binary file for use with the QC Minimodel.

2. User Parameters

None.

---

[31] MATH stands for <u>M</u>icro <u>A</u>nalysis of <u>T</u>ransfers to <u>H</u>ouseholds.

3. Programmer's Guide

a. Input file for step 1

QCFY2004.SD7   Final FSPQC database file, in SAS format

b. Output files from step 1

MATHPC.HDR   ASCII header file that describes the record layout of the database file, MATHPC.BIN

MATHPC.BIN   QC database file in standard binary form, in a hierarchical format (household record then person records for individuals in the household)

c. Program for step 1

MINIQC04.SAS

d. Output variables for step 1

The variables are the same as those in the FSPQC SAS data file.

e. Input files for step 2

MATHPC.HDR   ASCII header file that describes the record layout of the database file, MATHPC.BIN

MATHPC.BIN   QC database file in standard binary form, in a hierarchical format (household record then person records for individuals in the household)

f. Output files from step 2

MATHPC.HDR   ASCII header file that describes the record layout of the database file, MATHPC.BIN in final MATH format

MATHPC.BIN   QC database file in standard binary form, in a hierarchical format (household record then person records for individuals in the household) – in final MATH format.

g. Programs for step 2

Subroutine Tally Reads in FSDEPDED as a household-level variable for dependent deduction, renames to HDEPDED, then creates a person-level variable for dependent deduction called FSDEPDED. Reads in disability (FSDIS) and sets FSNDIS equal to FSDIS. Generates a person-level seed (SEEDP) and initializes FSALLPA to zero.

h. Output variables for step 2

The variables are the same as those in the FSPQC SAS data file, plus the newly created variables.

4. Technical Description

The following is a brief description of the procedures used to create a binary MATH-style version of the FSPQC database. For more detail, please refer to the MINIQC04.SAS program and the tally subroutine.

a. Create preliminary binary file

Create a hierarchical file in standard binary format with one household record for each household/record in the SAS dataset. Within each household, create one person-record for each person represented in the SAS dataset. Convert proprietary SAS missing data codes as follows:

.	-1	(blank on raw QC file)
.A	-2	(coded by MPR as out of range)
.B	-3	(coded by QC reviewer as unknown)
.C	-4	(unable to construct variable)
.D	-5	(household participating in month not certified)
.E	-6	(MFIP and SSI-CAP households, variable not relevant in benefit determination)

b. Create preliminary header file

Edit by hand the MATHPC.HDR file so that its record layout matches the output statement in MINIQC04.SAS.

c. Create final binary and header files

Using the output from MINIQC04.SAS, run a tally along with the QC Minimodel database-independent software to generate the final version of the binary file with a new person-level seed, the dependent deduction set to person-level, and new variables FSNDIS (same as FSDIS) and FSALLPA (set to zero).

B. QC-SPECIFIC PORTION OF THE QC MINIMODEL

1. Introduction

The QC Minimodel software is segregated into database-independent (generic) and database-specific components. In this section, we document the QC-specific portion of the model.

2. User Parameters

There are 10 user parameters that are specific to the QC model:

1. SHELCAP1 is the shelter limit for the continental US, Alaska, Hawaii, Guam and the Virgin Islands.

2. MN_BEN is a table by food stamp unit (FSU) size with entries for the food portion amounts and the cash portion amounts required for calculating the benefit for MFIP participants.

3. MNERNDED is the value used for calculating the earned income deduction for MFIP participants

4. XMN_FIP is a flag that allows us to exclude MFIP participants from a reform.

5. XSCAP_MS is a flag that allows us to exclude MSCAP participants from a reform.

6. XSCAP_NY is a flag that allows us to exclude NYSNIP participants from a reform.

7. XSCAP_SC is a flag that allows us to exclude SCCAP participants from a reform.

8. XSCAP_TX is a flag that allows us to exclude TXSNAP participants from a reform.

9. XSCAP_WA is a flag that allows us to exclude WASHCAP participants from a reform.

10. NSTRAT is the number of unique strata on the file (needed for statistical significance testing)

For a list of generic FSTAMP user parameters, see documentation for the database-independent portion of the FSP model (FSTAMP) in the *1999 MATH SIPP Programmer's Guide, Technical Description, and Codebook* (Bloom et al 2003).

3. Programmer's Guide

a. Input files

MATHPC.PRM   user parameter file (text file)

MATHPC.HDR   ASCII header file that describes the record layout of the database file, MATHPC.BIN

MATHPC.BIN   FSPQC database file in standard binary form, in a hierarchical format (household record then person records for persons in the household)

b. Output files

MATHPC.HDR   ASCII header file that describes the record layout of the output database file, MATHPC.BIN

MATHPC.BIN   FSPQC database file in standard binary form, in a hierarchical format (household record then person records for persons in the household)

MATHPC.TAB   summary tables

MATHPC.OUT   debug file

c. Programs

i. Subroutines

db_fs_counts	increments debug counters and prints totals to MATHPC.OUT file
db_fs_hh_definers	creates variables that do not vary by FSU
db_fs_display_partic_debug	dummy routine for compatibility with SIPP version
db_fs_asset	dummy routine for compatibility with generic food stamp code
db_fs_unit	identifies which household members belong to which food stamp unit and determines whether a person is categorically excluded from any FSU
db_fs_locate_vars	locates the database-specific input variables
db_fs_parm_array_sizes	sets the size of database-specific array sizes
db_fs_readparm	reads database-specific user parameters from parameter file
db_fs_validate_parm	validates the user parameters using database-specific criteria
db_fs_participation	determines whether or not eligible units participate
db_fs_display_debug	prints database-specific debug print about the FSP units and their eligibility determination
db_fs_vars	creates FSU summary variables (e.g., FSGRINC, FSNETINC)
calc_fsp_benefit	computes the benefit for participants in state programs with nonstandard benefit calculations

ii. Modules

fs_dbdefine	common storage for database-specific household definer variables
fs_dblocs	common storage for database-specific variable locations
fs_dbparm	common storage for model-specific variable locations

d. Output Variables

None. The database-independent portion of the MATH FSTAMP model creates all output variables.

4. Technical Description

a. Overview

The primary purpose of the QC-specific model algorithms is to use QC-specific data elements to construct the variables needed by the database-independent portion of FSTAMP. The most important QC-specific model algorithms are those in the db_fs_vars subroutine (found in DBVARS.F90). The specifications for these algorithms are found in section f below.

b. Validate User Parameters

i. Purpose

Although not QC-specific, two of the generic FSTAMP user parameters must have certain values for the QC model – BASELAW and FS_VARS.

ii. Specification

The QC model does not support BASELAW = ' ' (baselaw simulation), because the baselaw simulation is determined by the QC file editing process rather than by FSTAMP (although the QC file editing algorithms match FSTAMP algorithms exactly). For new baselaws, use BASELAW = FS_VARS in the NTH = 1 parameter set.

FS_VARS = 1 is not allowed, because the variables with a suffix of "1" are always on the file. The original, suffix "1" variables are always needed by the DBVARS routine for imputing medical, shelter, and child support payment expenses, and countable assets (when the unit composition is not that of the original unit). If you change the suffix "1" set of variables on the

43

file, make sure you understand the impact on the DBLOCS, DBDEFINE, and DBVARS calculations.

c. Locate the Input Variables Used and the Output Variables Created

i. Purpose

During KEOF = 1, before processing household records, obtain pointers to variables needed as input to the database-specific model algorithms.

ii. Specification

Use the LOCVAR supervisor routine to obtain and store locations for the following variables:

STATE	TANF	CONT	WRKREG	
LOCALCOD	GA	OTHUN	FSUN	1
RCNTACTN	OTHGOV	FSAFIL	FSUSIZE	1
FYWGT	SOCSEC	SEX	FSNKID	1
AGE	UNEMP	REL	FSNELDER	1
EMPRG	VET	FSMEDEXP	FSNDIS	1
WAGES	WCOMP	FSDEPDED	FSASSET	1
SLFEMP	EDLOAN	FSSLTEXP	YRMONTH	
OTHERN	CSUPRT	FSCSDED	STRATUM	
SSI	DEEM	EXFSCSDED	WGESUP	
DIVER	FSDIS		MN_FIP	
ENERGY	CAT_ELIG		SSI_CAP	
HOMEDED	HOMELSDED			

d. Construct Household Definer Variables

i. Purpose

For each household, create household definer variables that are used in subsequent calculations.

ii. Specification

Set WGT to FYWGT.

Set geographic indicators for U.S., Alaska, Hawaii, Guam and Virgin Islands. GEOG_DED indexes the standard deduction, dependent care deduction, and shelter deduction arrays; GEOG_SCRN indexes the gross and net income screen arrays; GEOG_BEN indexes the maximum benefit array; and GEOG_POV indexes the POVMONTH array.

```
select case (state%ihhld)
    case(15)                        !! hawaii
        geog_ded  = 3
        geog_scrn = 3
        geog_ben  = 5
    case(2)                         !! alaska
        geog_ded  = 2
        geog_scrn = 2
      select case(localcod%ihhld)
            case(82)                !! alaska rural i
                geog_ben = 3
            case(44,46,47,51)       !! alaska rural ii
                geog_ben = 4
            case default
                geog_ben  = 2       !! alaska urban is default
        end select
    case(66)                        !! guam
        geog_ded = 4
        geog_scrn= 1
        geog_ben = 6
    case(78)                        !! virgin islands
        geog_ded = 5
        geog_scrn= 1
        geog_ben = 7
    case default
        geog_ded  = 1
        geog_scrn = 1
        geog_ben  = 1
end select

geog_pov = geog_scrn

region = region_lookup(state%ihhld)
fstate = state%ihhld
```

Assign FSP reporting status: FS_REPORTER - set to true for all households

Obtain *original* QC values for imputation of shelter expenses, medical expenses, child support expenses, and dependent care deductions (FSSLTEXP, FSMEDEXP, FSCSDED, FSDEPDED) in cases where the FSU is not the original FSU. Note that all of the calculations below *must* be based on the original FSU and its data, even if a new baselaw has been constructed. Also, set original assets and original unit counts and flags.

```
orig_fsmedexp = original_fsmedexp%ihhld
orig_fssltexp = original_fssltexp%ihhld
orig_fsdepded = original_fsdepded%ihhld
orig_fscsded  = original_fscsded %ihhld

orig_fsuhead = 0
do ip = 1, ctprhh
   if (original_fsun%iper(ip) == ip) orig_fsuhead = ip
enddo
orig_fsusize  = original_fsusize %iper(orig_fsuhead)
orig_fsnkid   = original_fsnkid  %iper(orig_fsuhead)
orig_fsnelder = original_fsnelder%iper(orig_fsuhead)
orig_fsndis   = original_fsndis  %iper(orig_fsuhead)
orig_fsasset  = original_fsasset %iper(orig_fsuhead)
orig_kids_lt15 = 0
hhtanf = 0
do ip = 1, ctprhh
   if (tanf%iper(ip) > 0) hhtanf = hhtanf + tanf%iper(ip)
   if (original_fsun%iper(ip) == 0) cycle
   if (age%iper(ip) < 15  &
       .and. age%iper(ip) >=  0)  orig_kids_lt15  = orig_kids_lt15  + 1
enddo
```

e. Construct Food Stamp Unit

i. Purpose

Use the "FSUN 1" code to construct the FSU.   Make sure every FSU has a head.

ii. Specification

Assign FSUN (food stamp unit number) to each person in the household:

```
do ip = 1, ctprhh
    fsun(ip) = original_fsun%iper(ip)
enddo
```

Identify units that no longer have a head due to a reform - assign them a new head:

```
do ip = 1,ctprhh
   if (fsun(ip) == 0) cycle
   if (fsun(fsun(ip)) /= fsun(ip)) then
       do jp = ip+1,ctprhh
           if (fsun(jp) == fsun(ip)) fsun(jp) = ip
       enddo
       fsun(ip) = ip
   endif
 enddo
```

f. Create FSU Summary Variables

i. Purpose

Summarize characteristics of each food stamp unit by adding the countable income of all household members and counting various types of people in the unit (such as number of elderly persons and number of children).

ii. Specification

For each unit, aggregate the countable income of all members in the household. Gross income is the sum of all earned and unearned income. When appropriate, exclude child support expenses from the gross income (there are separate values that indicate expenses to be subtracted before the gross income test (EXFSCSDED) and expenses to be subtracted before the net income test (FSCSDED)).

```
do iunit = 1, ctprhh
   do ip = 1, ctprhh
      !--------  WELFARE Support  (Note: missing income values are coded as < 0)
      if (TANF%iper(ip) > 0) fsTANF(iunit)  = fsTANF(iunit) + TANF%iper(ip)
      if (ssi %iper(ip) > 0) fsssi (iunit)  = fsssi (iunit) + ssi %iper(ip)
      if (ga  %iper(ip) > 0) fsga  (iunit)  = fsga  (iunit) + ga  %iper(ip)

      !---------  Earnings
      if (wages %iper(ip) >0) fsearn(iunit) = fsearn(iunit) + wages %iper(ip)
      if (othern%iper(ip) >0) fsearn(iunit) = fsearn(iunit) + othern%iper(ip)
      if (slfemp%iper(ip) >0) fsearn(iunit) = fsearn(iunit) + slfemp%iper(ip)

      !---- Other unearned income
      if (othgov%iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + othgov%iper(ip)
      if (socsec%iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + socsec%iper(ip)
      if (unemp %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + unemp %iper(ip)
      if (vet %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + vet   %iper(ip)
      if (wcomp %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + wcomp %iper(ip)
      if (edloan%iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + edloan%iper(ip)
      if (csuprt%iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + csuprt%iper(ip)
      if (deem  %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + deem  %iper(ip)
      if (cont  %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + cont  %iper(ip)
      if (othun %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + othun %iper(ip)
      if (diver %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + diver %iper(ip)
      if (wgesup %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + wgesup %iper(ip)
      if (energy %iper(ip) > 0)  fsgrinc(iunit) = fsgrinc(iunit) + energy %iper(ip)

   end do ! end of person loop

   fsgrinc(iunit) = fsgrinc(iunit) + fsearn(iunit) + fsssi(iunit) + fsTANF(iunit) + fsga(iunit)
   fsgrinc(iunit) = fsgrinc(iunit) - exfscsded%iper(iunit)

 end do ! end of unit loop
```

47

For each unit, loop over persons in the unit and count unit members with various characteristics:

- Total members

- Number of adults and number of female adults (those with missing age are included as adults)

- Number of children, number of school-aged children, number of toddlers, number of children older than toddlers

- Number of elderly

```
  do iunit = 1, ctprhh
     do ip = 1, ctprhh
           if (fsun(ip) /= iunit) cycle   ! cycle if person not in the fsu
           fsusize(iunit)  = fsusize(iunit) + 1
          if (age%iper(ip) > max_kid_age .or. age%iper(ip) < 0) then
              fsnadult(iunit)  = fsnadult(iunit) + 1
              if (sex%iper(ip) == 2) femadults = femadults + 1
          else
              fsnkid(iunit)  = fsnkid(iunit) + 1
              if (age%iper(ip) >= min_school_age)  fsnk5t17(iunit) = fsnk5t17(iunit) + 1
              if (age%iper(ip) < max_toddler_age) then
                   fndeplt2(iunit) = fndeplt2(iunit) + 1
              else
                   fndepge2(iunit) = fndepge2(iunit) + 1
              end if
          end if

          if ( age%iper(ip) >= min_elderly_age ) fsnelder(iunit) = fsnelder(iunit) + 1

       end do ! end of person loop
  end do ! end of loop over all fs units in the household
```

Identify FSUs headed by a single female. This is not used for any eligibility determination. It is used for summary counts only (G/L table).

```
        if (fsnadult(iunit) == 1 .and. femadults==1 .and. fsnkid(iunit) >0) fsngmom(iunit) = 1
```

g. Impute Assets, Shelter Expenses, Medical Expenses, Homeless Deduction, and Child Support Payment Expenses When FSU Is Not the Original FSU

i. Purpose

Asset and expense data recorded on the FSPQC database pertain to the actual food stamp unit (FSU) sampled by the QC System. However, the QC Minimodel has the capability to simulate FSUs with compositions that are different from the composition of the original FSU by

removing individuals with certain characteristics from the original FSU. The minimodel cannot be used to simulate including individuals who are not members of the original FSU.

While the QC System collects countable income data for each household member, asset and expense data are recorded only for the original FSU as a whole. Thus, the minimodel uses the original FSU's asset and expense data, along with the algorithms described below, to impute the asset and expense data for any simulated FSU that has a composition different from that of the original FSU.

Many different imputation algorithms could be used to impute assets and expenses in simulations that involve changes to FSU composition. The best algorithm to use depends on the type of reform to be simulated. The algorithms described below have been incorporated into the minimodel because they have been used for numerous reform simulations requested by FNS. These algorithms will work well for many types of reforms, but they are not designed to be generally applicable.

ii. Specification

Countable assets. For all simulated FSUs, the minimodel assigns the countable assets of the original FSU:

fsasset (iunit) = orig_fsasset

While the value of countable assets is kept constant when the unit composition changes, the removal of certain persons from the FSU may mean that a different asset limit is applicable, thus resulting in some units losing asset eligibility. For example, the removal of elderly or disabled persons from the FSU would lead to a lower asset limit.

Shelter expenses. For all simulated FSUs, the minimodel assigns shelter expenses equal to the product of the number of persons in the unit and the per-capita shelter expenses of the original FSU:

```
fssltexp(iunit) = nint( orig_fssltexp * float(fsusize(iunit)) / orig_fsusize )
```

In reality, a household's shelter expenses are assigned to each FSU in the household, based on the share of shelter expenses actually *paid* by each member of each FSU. Although the QC data contain no information regarding which persons are responsible for paying shelter expenses, one could impute payment responsibility based on income; a person with 65 percent of a household's income would be assumed to be responsible for paying 65 percent of the household's shelter expenses. Again, the best imputation depends on the type of reform to be simulated.

Medical expenses. The minimodel imputes medical expenses based either on the number of elderly persons in the original unit, or, if no elderly individuals are present, on the presence of disabled persons. If the original unit contains no elderly persons and no disabled persons, then a medical deduction is not allowed—either in the original QC file editing process or in any minimodel simulations.

```
if (orig_fsmedexp > 0 ) then
        if (orig_fsnelder > 0) then
        fsmedexp(iunit) = nint( orig_fsmedexp * fsnelder(iunit) / float( orig_fsnelder))
    else if (orig_fsndis > 0) then
        fsmedexp(iunit) = nint( orig_fsmedexp * fsndis(iunit)   / float( orig_fsndis ) )
    else
        fsmedexp(iunit) = 0
    endif
endif
```

When both an elderly person and disabled persons are present, the algorithm uses only the number of elderly persons. The implicit assumption is that, in any given household, it is likely that a single person, rather than multiple people, is generating medical expenses. If the medical expenses are likely to be generated by a single person, the elderly person is more likely to be generating the expenses.

Child support payment expenses. The QC Minimodel imputes the child support payment expenses of the original unit to the head of the original unit. The child support deduction is equal to the child support expenses.

```
if (orig_fscsded > 0 .and. &
    fsun(orig_fsuhead) == iunit)  fscspded(iunit) = orig_fscsded
```

For any reform plan, the child support expenses are assigned to whichever simulated FSP unit contains the head of the original unit. If the head of the original unit does not belong to any of the reform units, then the child support expenses are not used.

Homeless deduction.   For all simulated FSUs, the minimodel assigns the homeless deduction attributed to the original unit, if the original unit is flagged as receiving a homeless deduction.

```
if (homeded%ihhld == 3) then
    fshomeDED(IUNIT) = homelsded%ihhld
end if
```

h.   Select Participants

i. Purpose

After eligibility is determined for an FSU in the household, the model must simulate whether or not the FSU decides to participate. In the QC Minimodel, all eligible units are selected to participate. Because every household on the file did in reality participate in the FSP, the all-eligible-units-participate model is reasonable in most cases. If a large reduction in FSP benefits is simulated, the user may want to model some eligible households to decide *not* to participate. If an eligible unit is simulated to have a zero benefit under reform, the unit is treated as ineligible in the reform results.

ii. Specification

```
do iunit = 1, ctprhh

    fspart(iunit) = 0

    if (fsun (iunit) /= iunit) cycle        !  not the fsu head

    if (fsben(iunit) > 0) fspart(iunit) = 1  !  all eligible units participate

end do
```

V. CODEBOOK FOR THE FY 2004 FSPQC DATABASE

In this chapter, we describe the variables on the FY 2004 FSPQC database, including an overview of the types of variables on the file and a list and detailed description of each variable.

A. OVERVIEW OF VARIABLES ON THE QUALITY CONTROL FILE

For each variable in the FY 2004 FSPQC database, the Codebook provides the name, origin, label, range of values, and a list of values or description. This section explains how to interpret and use that information.

1. Origin: Reported versus Constructed

The "Origin" column in the codebook indicates the source of each particular variable as either reported or constructed. Variables coded "R" are those reported on the Quality Control Review Schedule input form and have been read directly from the raw datafile, although some editing may have taken place as noted in the variable description. Variables coded "C" are constructed or recoded variables that are derived from reported variables and program parameters (such as the Thrifty Food Plan and the FSP benefit reduction rate). Constructed variables are the best variables for analytical purposes because inconsistencies have been corrected.

The following constructed variables are used in creating the tables in the *Characteristics of Food Stamp Households* report series and should be used to obtain consistent results:

FSBEN	Unit food stamp benefit amount
FSUSIZE	Unit size
FSGRINC	Unit total income
FSNETINC	Unit net income
FSERNDED	Unit earnings deduction
TPOV	Unit poverty percentage

2. Missing Values

Table V.1 lists the missing value conventions used in the FSPQC database.

TABLE V.1

CODES FOR MISSING DATA

ASCII or Binary Data	SAS Data	
Numeric	Numeric	Description
-1	.	Blank on source file
-2	.A	Value out of range
-3	.B	Coded by QC reviewer as unknown (field coded with all 9s)
-4	.C	Pertains to constructed variables only; variable could not be constructed or calculated due to missing data
-5	.D	For CERTMTH variable, indicates that household is participating in months not certified
-6	.E	For SSI-CAP and MFIP households, variables that are not relevant in the benefit determination

3. Using the FSPQC Database

The FY 2004 FSPQC database is a SAS file with 48,806 observations from 12 sample months—October 2003 to September 2004 for all states, the District of Columbia, Guam, and the Virgin Islands. The user has the flexibility to choose all 12 months, one month, or a set of months to conduct analyses. To conduct analyses for a specific calendar month, the user should select observations sampled in that month by using the year month (YRMONTH) variable. The year month variable is a six-digit code with the first four digits indicating the year and the last two digits indicating the month. For example, to conduct an analysis based on observations from January 2004, the user should select all observations with a YRMONTH code equal to "200401". If a subset of observations is not specified, all months will be included in the analysis.

After selecting the desired observations, the user must assign a weight to each observation so that the sample represents the national food stamp caseload. The weights, stored in the variable HWGT, are computed for each of the 12 independent monthly samples and are based on actual program participation. When analyzing one specific calendar month, the user should use the YRMONTH code to select the correct observations and then use the HWGT variable. However, if the analysis is based on more than one month, and an average monthly estimate is desired, the user should divide HWGT by the number of months being analyzed. The FYWGT variable should be used for all full-year tabulations (FYWGT=HWGT/12).

The tables in the *Characteristics of Food Stamp Households* report series are based on the full-year sample. To create the tables, we select all observations for all months and weight the observations by FYWGT to reflect the national monthly average caseload during the fiscal year.

The FSPQC database can be used to obtain person-level information along with unit-level data. An integer from 1 to 16, representing up to 16 people in a household, is attached to each person-level variable. For ease, users often place these variables in arrays and use indices to access the data. One of the key person-level variables is the affiliation code FSAFILi. An FSAFILi value of 1 indicates that the person participated in the FSP.

B. CODEBOOK

This codebook lists and describes each variable in the FY 2004 FSPQC database. The unit-level variables are listed first, followed by the person-level variables. Detailed error findings variables are at the end of the codebook. The unit-level variables are divided into the following 6 categories:

(1) Unit quality control review administrative data

(2) Unit demographics and sample weights

(3) Unit income

(4) Unit assets

(5) Unit expenses and deductions

(6) Unit benefits

The person-level variables are divided into 2 categories:

(7) Person-level characteristics

(8) Person-level income

The categories appear in the order shown above. The variables in each category are listed alphabetically. Two codebooks are presented, both sorted in the exact same order. The first codebook—the quick-reference codebook—lists only the variable name, its origin, and a brief description. The second codebook—the detailed codebook—lists the variable name, its origin, and a detailed description that includes all the valid values of the variable.

<u>VARIABLE</u>   **<u>ORIGIN</u>**   **<u>DESCRIPTION</u>**   *Quick-Reference Codebook*

Unit QC Review Administrative Data

ACTNTYPE	R	Type of action
ALLADJ	R	Allotment adjustment
AMTADJ	R	Amount of allotment adjustment
AUTHREP	R	Authorized representative
CASE	R	Case classification
CAT_ELIG	C	Indicator of categorical eligibility status
CERTMTH	R	Months in certification period
COUPFIX	C	Coupon allotment adjusted for errors
EXPEDSER	R	Received expedited service
HHLDNO	C	Household identification number
LASTCERT	C	Months since last certification for food stamps
LOCALCOD	R	Local agency code
MN_FIP	C	Indicator of MFIP participation
RCNTACTN	R	Most recent action on case
REVNUM	R	State QC review number
SSI_CAP	C	Indicator of SSI-CAP participation
STATUS	R	Status of case error findings
YRMONTH	R	Sample year and month

Unit Demographics and Sample Weights

CERTHHSZ	R	Certified unit size
COUNTYCD	C	FIPS code for county
CTPRHH	C	Number of people in household
FSDIS	C	Indicator of presence of disabled person in unit
FSNELDER	C	Number of elderly individuals in unit
FSNGMOM	C	Indicator of single-female headed unit
FSNK0T4	C	Number of preschool-age children in unit
FSNK5T17	C	Number of school-age children in unit
FSNKID	C	Number of children in unit
FSNONCIT	C	Number of noncitizens in unit
FSUSIZE	C	Constructed certified unit size
FYWGT	C	Weight used for full-year calculations
HWGT	C	Monthly sample weight
RAWHSIZE	R	Reported number of people in household
REGION	C	Constructed census region code
REGIONCD	R	FNS region code
STATE	R	FIPS code for state or territory
STRATUM	R	Stratum identification
TANF_IND	C	Indicator of TANF receipt for household
TPOV	C	Gross income/poverty level ratio
URBRUR	C	Urban/rural indicator
WRK_POOR	C	Indicator of working poor household

Unit Countable Income (Monthly Dollar Amounts)

Variable	Origin	Description
FSCONT	C	Countable unit income from contributions
FSCSUPRT	C	Countable unit child support payment income
FSDEEM	C	Countable unit deemed income
FSDIVER	C	Countable unit state diversion payments
FSEARN	C	Countable unit earned income
FSEDLOAN	C	Countable unit income from educational grants and loans
FSENERGY	C	Countable unit energy assistance income
FSGA	C	Countable unit general assistance benefits
FSGRINC	C	Final gross countable unit income
FSNETINC	C	Final net countable unit income
FSOTHERN	C	Countable unit other earned income
FSOTHGOV	C	Countable unit income from other government benefits
FSOTHUN	C	Countable unit other unearned income
FSSLFEMP	C	Countable unit self-employment income
FSSOCSEC	C	Countable unit social security income
FSSSI	C	Countable unit SSI benefits
FSTANF	C	Countable unit TANF payments
FSUNEARN	C	Countable unit unearned income
FSUNEMP	C	Countable unit unemployment compensation benefits
FSVET	C	Countable unit veterans' benefits
FSWAGES	C	Countable unit wages and salaries
FSWCOMP	C	Countable unit workers' compensation benefits
FSWGESUP	C	Countable unit wage supplementation income
RAWGROSS	R	Reported gross countable unit income
RAWNET	R	Reported net countable unit income

Unit Countable Assets

Variable	Origin	Description
FSASSET	C	Total countable assets
FSVEHAST	R	Reported non-excluded vehicles value
LIQRESOR	R	Reported liquid assets
OTHNLRES	R	Reported other nonliquid assets
REALPROP	R	Reported real property
VEHICLEA	R	Reported category for first vehicle
VEHICLEB	R	Reported category for second vehicle

Unit Expenses and Deductions

VARIABLE	ORIGIN	DESCRIPTION
ERN_INC_DED_PCT	C	Percentage used to calculate earnings deduction
EXCL_FSCSDED	C	Child support excluded from gross income
FSCSDED	C	Child support expense deduction
FSCSEXP	R	Reported child support expense deduction
FSDEPDED	R	Reported dependent care deduction
FSDEPDE2	C	Marginal effectiveness of dependent care deduction
FSERNDED	C	Calculated earned income deduction
FSERNDE2	C	Marginal effectiveness of earned income deduction
FSMEDDED	C	Calculated medical deduction
FSMEDDE2	C	Marginal effectiveness of medical deduction
FSMEDEXP	R	Reported medical expenses
FSSLTDED	C	Calculated excess shelter deduction
FSSLTDE2	C	Marginal effectiveness of excess shelter deduction
FSSLTEXP	C	Calculated shelter expenses
FSSTDDED	C	Standard deduction
FSSTDDE2	C	Marginal effectiveness of standard deduction
FSTOTDED	C	Total deductions
FSTOTDE2	C	Marginal effectiveness of total deduction
HOMEDED	R	Indicator of homelessness
HOMELESS_DED	C	Amount of homeless deduction
RAWERND	R	Reported earned income deduction
RENT	R	Rent/mortgage amount
SHELCAP	C	Maximum allowable shelter expense deduction
SHELDED	R	Reported shelter deduction
SUA1	R	Standard utility allowance – usage and entitlement
SUA2	R	Standard utility allowance – prorated
UTIL	R	Utility amount

Unit Benefits

VARIABLE	ORIGIN	DESCRIPTION
AMTERR	R	Amount of coupon allotment in error
ASSLIM	C	Asset limit
BENMAX	C	Maximum benefit amount
FSASTEST	C	Indicator of passing asset test
FSBEN	C	Final calculated benefit
FSGRTEST	C	Indicator of passing gross income test
FSMINBEN	C	Received minimum benefit
FSNETEST	C	Indicator of passing net income test
GROSSCRN	C	Gross income screen
NETSCRN	C	Net income screen
RAWBEN	R	Reported food stamp benefit received

Person-Level Characteristics: i = 1 to 16

Variable	Origin	Description
ABWDSTi	R	ABAWD status
AGEi	R	Age
CTZNi	R	Citizenship status
DPCOSTi	R	Reported dependent care cost
EMPRGi	R	FSP Employment and training program status
EMPSTAi	R	Employment status – type
EMPSTBi	R	Employment status – amount
FSAFILi	R	Food stamp case affiliation
FSUNi	C	Position of head of food stamp unit
RACETHi	R	Race/ethnicity
RELi	R	Relationship to head of household
SEXi	R	Sex
WRKREGi	R	Work registration status
YRSEDi	R	Highest educational level completed

Person-Level Countable Income (Monthly Dollar Amounts): i = 1 to 16

Variable	Origin	Description
CONTi	R	Countable income from contributions
CSUPRTi	R	Countable child support payment income
DEEMi	R	Countable deemed income
DIVERi	R	Countable state diversion payments
EDLOANi	R	Countable income from educational grants and loans
ENERGYi	R	Countable energy assistance income
GAi	R	Countable general assistance benefits
OTHERNi	R	Countable other earned income
OTHGOVi	R	Countable income from other government benefits
OTHUNi	R	Countable other unearned income
SLFEMPi	R	Countable self-employment income
SOCSECi	R	Countable social security income
SSIi	R	Countable SSI benefits
TANFi	R	Countable TANF payments
UNEMPi	R	Countable unemployment compensation benefits
VETi	R	Countable veterans' benefits
WAGESi	R	Countable wages and salaries
WCOMPi	R	Countable workers' compensation benefits
WGESUPi	R	Countable wage supplementation income

Detailed Error Findings: i = 1 to 9

Variable	Origin	Description
AGENCYi	R	Agency or client responsibility
AMOUNTi	R	Variance dollar amount
DISCOVi	R	Variance discovery
E_FINDGi	R	Error finding
ELEMENTi	R	Variance element
NATUREi	R	Nature of variance
OCCDATEi	R	Variance occurrence date
TIMEPERi	R	Variance time period
VERIFi	R	Variance verification

Unit QC Review Administrative Data

ACTNTYPE	R	TYPE OF ACTION Range = (1, 2) 1=Certification 2=Recertification

ALLADJ	R	ALLOTMENT ADJUSTMENT Range = (1, 3) 1=No adjustment 2=Prorated benefit 3=Other adjustment

AMTADJ	R	AMOUNT OF ALLOTMENT ADJUSTMENT Range = (0, 3240)

AUTHREP	R	AUTHORIZED REPRESENTATIVE Range = (1, 2) 1=Used to make application 2=Not used to make application

CASE	R	CASE CLASSIFICATION Range = (1, 3) 1=Included in error rate calculation 2=Excluded from error rate calculation – processed by SSA worker 3=Excluded from error rate calculation, as designated by FNS (e.g. demo project, simplified FSP)

CAT_ELIG	C	INDICATOR OF CATEGORICAL ELIGIBILITY STATUS Range = (1, 2) 1=Unit categorically eligible for benefits and therefore not subject to the income or asset tests 2=Unit not categorically eligible for benefits

CERTMTH	R	MONTHS IN CERTIFICATION PERIOD Range = (0, 71) Number of months the food stamp unit was certified to participate during the current certification or recertification.

COUPFIX	C	COUPON ALLOTMENT ADJUSTED FOR ERRORS Range = (1, 1779)

EXPEDSER	R	RECEIVED EXPEDITED SERVICE Range = (1, 3) 1=Entitled to expedited service and received benefits within the federal time frame 2=Entitled to expedited service but did not receive benefits within the federal time frame 3=Not entitled to expedited service
HHLDNO	C	HOUSEHOLD IDENTIFICATION NUMBER Range = (1, 57350) Position of the unit in the unedited FSPQC file. This is a unique unit identifier.
LASTCERT	C	MONTHS SINCE LAST CERTIFICATION FOR FOOD STAMPS Range = (0, 98)
LOCALCOD	R	LOCAL AGENCY CODE Range = (1, 930) Designates local agency and allows grouping of data by county or county equivalent. May be FIPS code or an alternative classification.
MN_FIP	C	INDICATOR OF MFIP PARTICIPATION Range = (0, 1) 0=No 1=Yes
RCNTACTN	R	MOST RECENT ACTION ON CASE Range = (19821206, 20040930) Date the case was certified or recertified for participation in the sample month under review. In the form yyyymmdd.
REVNUM	R	STATE QC REVIEW NUMBER Range = (1, 841227)
SSI_CAP	C	INDICATOR OF SSI-CAP PARTICIPATION Range = (0,3) 0=Not in SSI-CAP 1=SSI-CAP case with standard shelter expenses 2=SSI-CAP case with standardized benefit, consistent with program rules 3=SSI-CAP case with standardized benefit, inconsistent with program rules

STATUS   R   STATUS OF CASE ERROR FINDINGS
Range = (1, 3)
1=Amount correct
2=Overissuance
3=Underissuance

YRMONTH   R   SAMPLE YEAR AND MONTH
Range = (200310, 200409)
Allows user to select one or more sample months from the full-year file for analyses. The YRMONTH variable is a six-digit code; the first four digits indicate the sample year and the last two indicate the month. To select observations from the month of January 2004, for example, YRMONTH should equal "200401".

Unit Demographics and Sample Weights

VARIABLE	ORIGIN	DESCRIPTION
CERTHHSZ	R	CERTIFIED UNIT SIZE Range = (1, 43)
COUNTYCD	C	FIPS CODE FOR COUNTY Range = (1, 840)
CTPRHH	C	NUMBER OF PEOPLE IN HOUSEHOLD Range = (1, 16) Number of people in the household with non-missing person-level information.
FSDIS	C	INDICATOR OF PRESENCE OF DISABLED PERSON IN UNIT Range = (0, 1) 0=No 1=Yes Defined as a unit with either (1) nonelderly SSI-recipients, (2) a medical expense deduction and no elderly individuals, or (3) nonelderly individuals who do not appear to be working and who are receiving Social Security, Veteran's benefits, or Worker's compensation.
FSNELDER	C	NUMBER OF ELDERLY INDIVIDUALS IN UNIT Range = (0, 3) Number of people age 60 or older in the food stamp unit.
FSNGMOM	C	INDICATOR OF SINGLE-FEMALE HEADED UNIT Range = (0, 1) 0=No 1=Yes A unit with one adult and one or more children, and the adult is female.
FSNK0T4	C	NUMBER OF PRESCHOOL-AGE CHILDREN IN UNIT Range = (0, 5) Number of children under age five in the food stamp unit.
FSNK5T17	C	NUMBER OF SCHOOL-AGE CHILDREN IN UNIT Range = (0, 13) Number of children age 5 to 17 in the food stamp unit.
FSNKID	C	NUMBER OF CHILDREN IN UNIT Range = (0, 15) Number of children under age 18 in the food stamp unit.

VARIABLE	ORIGIN	DESCRIPTION	*Detailed Codebook*
			Unit Demographics and Sample Weights

FSNONCIT   C   NUMBER OF NONCITIZENS IN UNIT
Range = (0, 11)
Number of people with FSAFILi=1 and CTZNi>=3.

FSUSIZE   C   CONSTRUCTED CERTIFIED UNIT SIZE
Range = (1, 16)
Number of people with FSAFILi=1.

FYWGT   C   WEIGHT USED FOR FULL-YEAR CALCULATIONS
Range = (13.06, 1137.21)
Calculated as HWGT/12.

HWGT   C   MONTHLY SAMPLE WEIGHT
Range = (156.75, 13646.47)
Allows the user to replicate total monthly caseloads as reflected in Food Stamp Program Operations data. If the reference period of analysis is longer than one calendar month, in order to get an average monthly value for that reference period, the weight field must be divided by the number of months being analyzed.

RAWHSIZE   R   REPORTED NUMBER OF PEOPLE IN HOUSEHOLD
Range = (1, 16)

REGION   C   CONSTRUCTED CENSUS REGION CODE
Range = (1, 4)
1=Northeast
2=Midwest
3=South
4=West
See Appendix E for a list of states in each region.

REGIONCD   R   FNS REGION CODE
Range = (1, 7)
1=Northeast
2=Mid-Atlantic
3=Southeast
4=Midwest
5=Southwest
6=Mountain Plains
7=Western
See Appendix E for a list of states in each region.

STATE   R   FIPS CODE FOR STATE OR TERRITORY
Range = (1, 78)
See Appendix E for FIPS code list.

STRATUM   R   STRATUM IDENTIFICATION
Range = (0, 42)
Codes for distinct parts of States with stratified samples. Blank stratum codes have been recoded to zero and STRATUM codes for Texas have been recoded from character to numeric values.

TANF_IND   C   INDICATOR OF TANF RECEIPT FOR HOUSEHOLD
Range = (0, 1)
0=No
1=Yes
TANF_IND=1 if FSTANF>0 or MN_FIP=1.

TPOV   C   GROSS INCOME/POVERTY LEVEL RATIO
Range = (0, 296)
TPOV=FSGRINC/NETSCRN*100, rounded to the nearest integer. If FSGRINC=0 then TPOV=0. Otherwise, if TPOV rounds to zero, TPOV is set equal to one.

URBRUR   C   URBAN/RURAL INDICATOR
Range = (1, 3)
Location of agency at which household's FSP application was processed.
1=Metropolitan (Contains at least one urbanized area of 50,000 or more population and includes adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties)
2=Micropolitan (Contains at least one urban cluster of at least 10,000 but less than 50,000 population and includes adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties)
3=Rural (Not metropolitan or micropolitan)

WRK_POOR   C   INDICATOR OF WORKING POOR HOUSEHOLD
Range = (0, 1)
0=No
1=Yes
Defined as households with at least two indicators of earnings.

Unit Countable Income (Monthly Dollar Amounts)

FSCONT	C	COUNTABLE UNIT INCOME FROM CONTRIBUTIONS Range = (0, 1789) Sum of CONT1 through CONT16.
FSCSUPRT	C	COUNTABLE UNIT CHILD SUPPORT PAYMENT INCOME Range = (0, 1697) Sum of CSUPRT1 through CSUPRT16.
FSDEEM	C	COUNTABLE UNIT DEEMED INCOME Range = (0, 1013) Sum of DEEM1 through DEEM16.
FSDIVER	C	COUNTABLE UNIT STATE DIVERSION PAYMENTS Range = (0, 586) Sum of DIVER1 through DIVER16.
FSEARN	C	COUNTABLE UNIT EARNED INCOME Range = (0, 4979) Sum of FSWAGES, FSSLFEMP, and FSOTHERN.
FSEDLOAN	C	COUNTABLE UNIT INCOME FROM EDUCATIONAL GRANTS AND LOANS Range = (0, 444) Sum of EDLOAN1 through EDLOAN16.
FSENERGY	C	COUNTABLE UNIT ENERGY ASSISTANCE INCOME Range = (0, 723) Sum of ENERGY1 through ENERGY16.
FSGA	C	COUNTABLE UNIT GENERAL ASSISTANCE BENEFITS Range = (0, 1280) Sum of GA1 through GA16.
FSGRINC	C	FINAL GROSS COUNTABLE UNIT INCOME Range = (0, 4979) Total monthly gross income of unit. Sum of FSEARN and FSUNEARN.

FSNETINC   C   FINAL NET COUNTABLE UNIT INCOME
                             Range = (0, 3813)
                             Total monthly income of unit, after applying deductions.
                             Calculated as FSGRINC-FSTOTDED but not less than 0.
                             Coded as missing for MFIP households and for SSI-CAP
                             households in Mississippi, New York, South Carolina, and
                             Texas.

FSOTHERN   C   COUNTABLE UNIT OTHER EARNED INCOME
                             Range = (0, 2404)
                             Sum of OTHERN1 through OTHERN16.

FSOTHGOV   C   COUNTABLE   UNIT   INCOME   FROM   OTHER
                             GOVERNMENT BENEFITS
                             Range = (0, 1740)
                             Sum of OTHGOV1 through OTHGOV16.

FSOTHUN   C   COUNTABLE UNIT OTHER UNEARNED INCOME
                             Range = (0, 2088)
                             Sum of OTHUN1 through OTHUN16.

FSSLFEMP   C   COUNTABLE UNIT SELF-EMPLOYMENT INCOME
                             Range = (0, 2190)
                             Sum of SLFEMP1 through SLFEMP16.

FSSOCSEC   C   COUNTABLE UNIT SOCIAL SECURITY INCOME
                             Range = (0, 2236)
                             Sum of SOCSEC1 through SOCSEC16.

FSSSI   C   COUNTABLE UNIT SSI BENEFITS
                             Range = (0, 2256)
                             Sum of SSI1 through SSI16.

FSTANF   C   COUNTABLE UNIT TANF PAYMENTS
                             Range = (0, 2980)
                             Sum of TANF1 through TANF16.

FSUNEARN   C   COUNTABLE UNIT UNEARNED INCOME
                             Range = (0, 2980)
                             Sum of FSCONT, FSCSUPRT, FSDEEM, FSEDLOAN,
                             FSGA, FSOTHGOV, FSOTHUN, FSSOCSC, FSSSI,
                             FSTANF, FSUNEMP, FSVET, FSWCOMP, FSDIVER,
                             FSENERGY, and FSWGESUP.

FSUNEMP	C	COUNTABLE UNIT UNEMPLOYMENT COMPENSATION BENEFITS Range = (0, 2827) Sum of UNEMP1 through UNEMP16.
FSVET	C	COUNTABLE UNIT VETERANS' BENEFITS Range = (0, 1528) Sum of VET1 through VET16.
FSWAGES	C	COUNTABLE UNIT WAGES AND SALARIES Range = (0, 4979) Sum of WAGES1 through WAGES16.
FSWCOMP	C	COUNTABLE UNIT WORKERS' COMPENSATION BENEFITS Range = (0, 1950) Sum of WCOMP1 through WCOMP16.
FSWGESUP	C	COUNTABLE UNIT WAGE SUPPLEMENTATION INCOME Range = (0, 848) Sum of WGESUP1 through WGESUP16.
RAWGROSS	R	REPORTED GROSS COUNTABLE UNIT INCOME Range = (0, 88150) Reported total monthly countable income of unit, before applying deductions. (See FSGRINC for the final value.)
RAWNET	R	REPORTED NET COUNTABLE UNIT INCOME Range = (0, 5790) Reported total monthly countable income of unit after applying deductions. (See FSNETINC for the final value.)

Unit Countable Assets

FSASSET   C   TOTAL COUNTABLE ASSETS
Range = (0, 99998)
Sum of LIQRESOR, FSVEHAST, OTHNLRES and REALPROP.

FSVEHAST   R   REPORTED NON-EXCLUDED VEHICLES VALUE
Range = (0, 4500)

LIQRESOR   R   REPORTED LIQUID ASSETS
Range = (0, 81994)

OTHNLRES   R   REPORTED OTHER NONLIQUID ASSETS
Range = (0, 10000)

REALPROP   R   REPORTED REAL PROPERTY
Range = (0, 99998)
Does not include home.

VEHICLEA   R   REPORTED CATEGORY FOR FIRST VEHICLE
We recommend against using VEHICLEA. See Appendix A for more details.
Range = (1, 8)
1=No vehicle
2=Vehicle exempt because used for producing income, as a home, to transport a physically disabled member, for long distance travel (other than commuting), or to carry fuel or water
3=Vehicle exempt because inaccessible resource (equity value is $1,500 or less)
4=Vehicle is exempt due to categorical eligibility
5=Vehicle excluded under State TANF standard (vehicle of non-categorically eligible household members only)
6=Vehicle is registered and is attributable to an adult household member or is used by a person under 18 for employment or education (subject to fair market value only)
7=Vehicle is not registered (equity test only)
8=Vehicle is not excluded and is not included in code 6 (subject to fair market value or equity test, whichever is greater)

VEHICLEB R REPORTED CATEGORY FOR SECOND VEHICLE

We recommend against using VEHICLEB. See Appendix A for more details.

Range = (1, 8)

1=No vehicle

2=Vehicle exempt because used for producing income, as a home, to transport a physically disabled member, for long distance travel (other than commuting), or to carry fuel or water

3=Vehicle exempt because inaccessible resource (equity value is $1,500 or less)

4=Vehicle is exempt due to categorical eligibility

5=Vehicle excluded under State TANF standard (vehicle of non-categorically eligible household members only)

6=Vehicle is registered and is attributable to an adult household member or is used by a person under 18 for employment or education (subject to fair market value only)

7=Vehicle is not registered (equity test only)

8=Vehicle is not excluded and is not included in code 6 (subject to fair market value or equity test, whichever is greater)

Units Expenses and Deductions

ERN_INC_DED_PCT   C   PERCENTAGE USED TO CALCULATE EARNINGS
                       DEDUCTION
                       Range = (.20, .36)
                       0.36 is used for MFIP participants; 0.2 for all others.

EXCL_FSCSDED   C   CHILD SUPPORT EXCLUDED FROM GROSS INCOME
                       Range = (0, 491)
                       Child support expenses that are excluded before the gross income
                       test, rather than before the net income test for eligibility.

FSCSDED   C   CHILD SUPPORT EXPENSE DEDUCTION
                       Range = (0, 1600)
                       Coded as missing for MFIP households and for SSI-CAP
                       households in Mississippi, New York, South Carolina, and Texas.

FSCSEXP   R   REPORTED CHILD SUPPORT EXPENSE DEDUCTION
                       Range = (0, 1600)
                       (Some states treat child support payments made to non-household
                       members as an income exclusion rather than a deduction. See
                       EXCL_FSCSDED and FSCSDED for final values.)

FSDEPDED   R   REPORTED DEPENDENT CARE DEDUCTION
                       Range = (0, 725)
                       Some values have been edited to obtain consistency with
                       DPCOST1 to DPCOST16 and to improve the final benefit
                       calculation. See Appendix B for more details. Coded as missing
                       for all MFIP and SSI-CAP households.

FSDEPDE2   C   MARGINAL EFFECTIVENESS OF DEPENDENT CARE DEDUCTION[32]
Range = (0, 1036)
Calculated as FSDEPDE2=NEWNET-FSNETINC where
NEWNET=MAX (0, FSGRINC-FSSLT3-FSERNDED-
          FSMEDDED-FSSTDDED-FSCSDED-
          HOMELESS_DED)
and where FSSLT3 is the shelter deduction calculated without FSDEPDED.
Coded as missing for all MFIP and SSI-CAP households.

FSERNDED   C   CALCULATED EARNED INCOME DEDUCTION
Range = (0, 995)
Calculated as FSERNDED=ERN_INC_DED_PCT*FSEARN, rounded to nearest integer. The deduction equals 36% of total earned income for MFIP participants and 20% of total earned income for all others. Coded as missing for all SSI-CAP households.

FSERNDE2   C   MARGINAL EFFECTIVENESS OF EARNED INCOME DEDUCTION
Range = (0, 995)
Calculated as FSERNDE2=NEWNET-FSNETINC where
NEWNET=MAX (0, FSGRINC-FSSLT2-FSDEPDED-
          FSMEDDED-FSSTDDED-FSCSDED-
          HOMELESS_DED)
and where FSSLT2 is the shelter deduction calculated without FSERNDED.
Coded as missing for all MFIP and SSI-CAP households.

FSMEDDED   C   CALCULATED MEDICAL DEDUCTION
Range = (0, 9942)
The deduction is for units with elderly or disabled members only; in FY 2004 the entry for medical expenses should only include expenses in excess of $35.
Calculated as FSMEDDED=MAX(0, FSMEDEXP).
Coded as missing for all MFIP and SSI-CAP households.

---

[32] The marginal effectiveness variables are calculated as the difference between the actual calculated net income and what the net income would have been without the deduction. Therefore, these variables show the actual impact of FSP income deductions. Because the combined value of deductions a household is entitled to sometimes exceeds the gross income received by the household, the marginal effectiveness variables give a more accurate picture of the impact of the deductions.

FSMEDDE2   C   MARGINAL EFFECTIVENESS OF MEDICAL DEDUCTION
Range = (0, 1440)
Calculated as FSMEDDE2=NEWNET-FSNETINC where
NEWNET=MAX (0, FSGRINC-FSSLT4-FSDEPDED-
        FSERNDED-FSSTDDED-FSCSDED-
        HOMELESS_DED)
and where FSSLT4 is the shelter deduction calculated without
FSMEDDED.
Coded as missing for all MFIP and SSI-CAP households.

FSMEDEXP   R   REPORTED MEDICAL EXPENSES
Range = (0, 9942)
Allowable medical expenses in excess of $35 for elderly and
disabled household members.

FSSLTDED   C   CALCULATED EXCESS SHELTER DEDUCTION
Range = (0, 3066)
Set to zero if HOMEDED=3. Otherwise, set equal to XCOST for
units with elderly or disabled, and equal to the minimum of
XCOST and SHELCAP for units without elderly or disabled
where
XCOST=MAX(0, FSSLTEXP-HALFNET), and
HALFNET=MAX (0,ROUND(FSGRINC-FSSTDDED-
        FSERNDED-FSDEPDED-FSMEDDED-
        FSCSDED)/2).
The final value of FSSLTDED is rounded to the nearest integer.
Coded as missing for MFIP households and for SSI-CAP
households in Mississippi, New York, South Carolina, and Texas.

FSSLTDE2   C   MARGINAL EFFECTIVENESS OF EXCESS SHELTER
DEDUCTION
Range = (0, 1330)
Calculated as FSSLTDE2=NEWNET-FSNETINC where
NEWNET=MAX (0,FSGRINC-FSDEPDED-FSERNDED-
        FSMEDDED-FSSTDDED-FSCSDED-
        HOMELESS_DED).
Coded as missing for MFIP households and for SSI-CAP
households in Mississippi, New York, South Carolina, and Texas.

FSSLTEXP   C   CALCULATED SHELTER EXPENSES
Range = (0, 4753)
Sum of RENT and UTIL.

FSSTDDED   C   STANDARD DEDUCTION
Range = (0, 342)
Varies by region. See Appendix F for schedule.
Coded as missing for MFIP households and for SSI-CAP households in Mississippi, New York, South Carolina, and Texas.

FSSTDDE2   C   MARGINAL EFFECTIVENESS OF STANDARD DEDUCTION
Range = (0, 513)
Calculated as FSSTDDE2=NEWNET-FSNETINC where
NEWNET=MAX (0, FSGRINC-FSSLT1-FSDEPDED-
           FSERNDED-FSMEDDED-FSCSDED-
           HOMELESS_DED)
and where FSSLT1 is the shelter deduction calculated without FSSTDDED.
Coded as missing for MFIP households and for SSI-CAP households in Mississippi, New York, South Carolina, and Texas.

FSTOTDED   C   TOTAL DEDUCTIONS
Range = (0, 10843)
Sum of FSSTDDED, FSERNDED, FSDEPDED, FSSLTDED, FSMEDDED, HOMELESS_DED, and FSCSDED.
Coded as missing for SSI-CAP households in Mississippi, New York, South Carolina, and Texas.

FSTOTDE2   C   MARGINAL EFFECTIVENESS OF TOTAL DEDUCTION
Range = (0, 2362)
Calculated as FSGRINC-FSNETINC.
Coded as missing for MFIP households and for SSI-CAP households in Mississippi, New York, South Carolina, and Texas.

HOMEDED   R   INDICATOR OF HOMELESSNESS
Range = (1, 3)
1=Not homeless
2=Homeless, not receiving homeless shelter allowance
3=Homeless, receiving homeless shelter allowance

HOMELESS_DED   C   AMOUNT OF HOMELESS DEDUCTION
Range = (0, 143)
Positive value only for those with HOMEDED = 3.
Coded as missing for all MFIP and SSI-CAP households.

RAWERND   R   REPORTED EARNED INCOME DEDUCTION
Range = (0, 998)
(See FSERNDED for final earned income deduction value.)

RENT   R   RENT/MORTGAGE AMOUNT
                                   Range = (0, 4503)
                                   Some values for SSI-CAP households have been edited to apply
                                   standard shelter allowances.

SHELCAP   C   MAXIMUM ALLOWABLE SHELTER EXPENSE
                                   DEDUCTION
                                   Range = (298, 604)
                                   SHELCAP varies by region. See Appendix F for values.

SHELDED   R   REPORTED SHELTER DEDUCTION
                                   Range = (0, 71001)
                                   (See FSSLTDED for the final value.)

SUA1   R   STANDARD UTILITY ALLOWANCE – USAGE AND
                                   ENTITLEMENT
                                   Range = (1, 9)
                                   1=No utilities and no LIHEAA
                                   2=Uses actual expenses
                                   3=Uses higher standard based on LIHEAA
                                   4=Uses higher standard and does not received LIHEAA
                                   5=Uses lower standard
                                   6=Uses phone only standard
                                   7=Uses individual standards
                                   8=Uses individual standards, LIHEAA status unknown
                                   9=Other
                                   Some values have been edited to obtain consistency with UTIL.
                                   See Appendix B for more details.

SUA2   R   STANDARD UTILITY ALLOWANCE – PRORATED
                                   Range = (1, 2)
                                   1=Not prorated
                                   2=Prorated
                                   Some values have been edited to obtain consistency with UTIL.
                                   See Appendix B for more details.

UTIL   R   UTILITY AMOUNT
                                   Range = (0, 2962)
                                   Some values have been edited to improve the final benefit
                                   calculation. See Appendix B for more details.

Unit Benefits

AMTERR   R   AMOUNT OF COUPON ALLOTMENT IN ERROR
Range = (0, 600)
Dollar amount of coupon issuance error for errors of $25 or more.

ASSLIM   C   ASSET LIMIT
Range = (2000, 5000)
FSP eligibility limit. Categorically eligible units are not subject to the asset limit. See Appendix F for schedule.

BENMAX   C   MAXIMUM BENEFIT AMOUNT
Range = (141, 1880)
The maximum possible benefit for a unit, which varies by unit size and region. See Appendix F for schedule.

FSASTEST   C   INDICATOR OF PASSING ASSET TEST
Range = (0, 1)
0=No
1=Yes

FSBEN   C   FINAL CALCULATED BENEFIT
Range = (1, 1606)
Calculated as FSBEN=MAX(10, BENMAX-ROUND(.3*FSNETINC)) if FSUSIZE is 2 or less, otherwise FSBEN=MAX(0, BENMAX-ROUND(.3*FSNETINC)) for all units, except MFIP units and SSI-CAP units in Mississippi, New York, South Carolina, and Texas where the benefit is calculated using a state-specific formula.

FSGRTEST   C   INDICATOR OF PASSING GROSS INCOME TEST
Range = (0, 1)
0=No
1=Yes

FSMINBEN   C   RECEIVED MINIMUM BENEFIT
Range = (0, 1)
0=No
1=Yes (FSBEN=10 and FSUSIZE=1 or 2)
SSI-CAP units in Mississippi, New York, South Carolina, and Texas are always set equal to 0.

FSNETEST C INDICATOR OF PASSING NET INCOME TEST
Range = (0, 1)
0=No
1=Yes
Coded as missing for MFIP households and for SSI-CAP households in Mississippi, New York, South Carolina, and Texas.

GROSSCRN C GROSS INCOME SCREEN
Range = (973, 6082)
FSP eligibility limit determined by unit size. Categorically eligible units are not subject to the gross income screen. See Appendix F for schedule.

NETSCRN C NET INCOME SCREEN
Range = (749, 4676)
FSP eligibility limit determined by unit size. Categorically eligible units are not subject to the net income screen. See Appendix F for schedule.

RAWBEN R REPORTED FOOD STAMP BENEFIT RECEIVED
Range = (2, 1900)
Reported amount of food stamps that the unit was certified to receive during the sample month. (See FSBEN for final value.)

Person-Level Characteristics

ABWDST1 to ABWDST16	R	ABAWD STATUS Range = (1, 7) Person 1 through Person 16 1=Not an ABAWD 2=ABAWD in a waived area 3=Exempt based on 15 percent option 4=ABAWD meeting work requirements 5=ABAWD in 1st 3 months 6=ABAWD in 2nd 3 months 7=ABAWD which has exhausted time limited benefits
AGE1 to AGE16	R	AGE Range = (0, 98) Person 1 through Person 16 0=Age less than 1 year 1-97=Age in years 98=Age 98 years or more
CTZN1 to CTZN16	R	CITIZENSHIP STATUS Range = (1, 10) Person 1 through Person 16 1=U.S. born citizen 2=Naturalized Citizen 3=Legal permanent resident with 40 quarters of work, military service, five years legal United States residency, disability, or under 18 years of age 5=Person admitted as refugee, granted asylum, or given a stay of deportation 6=Other eligible noncitizen 7=Noncitizen legally in US who does not meet one of the above codes and who is not receiving food stamps but whose income and resources must be considered in determining benefits 8=Other ineligible legal noncitizen (e.g. visitor, tourist, student, diplomat) 9=Undocumented noncitizen 10=Noncitizen, status unknown
DPCOST1 to DPCOST16	R	REPORTED DEPENDENT CARE COST Range = (0, 546) Person 1 through Person 16 Some values have been edited to obtain consistency with FSDEPDED. See Appendix B for details.

| EMPRG1 to EMPRG16 | R | FSP EMPLOYMENT AND TRAINING PROGRAM STATUS |

We recommend against using EMPRGi. See Appendix A for more details.
Range = (0, 9)
Person 1 through Person 16
0=Not participating in E&T
1=Participating in non-FSP E&T (such as TANF)
2=FSP job search or job search training
3=FSP E&T workfare or work experience
4=FSP E&T work supplementation
5=FSP E&T education leading to HS diploma or GED
6=FSP E&T post secondary education leading to degree or certificate
7=FSP E&T remedial education (including adult education and English lessons not leading to a degree
8=FSP E&T vocational training
9=Other

| EMPSTA1 to EMPSTA16 | R | EMPLOYMENT STATUS – TYPE |

Range = (1, 8)
Person 1 through Person 16
We recommend against using EMPSTAi. See Appendix A for more details.
1=Not in labor force and not looking for work
2=Unemployed and looking for work
3=Active duty military
4=Migrant farm labor
5=Non-migrant farm labor
6=Self-employed, farming
7=Self-employed, non-farming
8=Employed by other

| EMPSTB1 to EMPSTB16 | R | EMPLOYMENT STATUS – AMOUNT |

Range = (1, 5)
Person 1 through Person 16
We recommend against using EMPSTBi. See Appendix A for more details.
1=Not employed
2=1-19 hours/week
3=20-29 hours/week
4=30-39 hours/week
5=Full-time - 40 hours or more

FSAFIL1 to   R   FOOD STAMP CASE AFFILIATION
FSAFIL16

Range = (1, 99)

Person 1 through Person 16

We recommend against using FSAFILi except to identify participants. See Appendix A for more details.

1=Eligible member of food stamp case under review and entitled to receive benefits

2=Eligible FSP participant in another unit, not currently under review (code added by MPR for use in certain TXSNAP households)

4=Member is an ineligible noncitizen and is not participating in a state-funded Food Stamp Program

5=Member not paying/cooperating with child support agency

6=Member is an ineligible striker

7=Member is an ineligible student

8=Member is disqualified for program violation

9=Member is ineligible to participate due to disqualification for failure to meet work requirements (work registration, E&T, acceptance of employment, employment status/job availability, voluntary quit/reducing work effort, workfare/comparable and workfare)

10=ABAWD time limit exhausted and the ABAWD is ineligible to participate due to failure to meet ABAWD work requirements, to work at least 20 hours per week, to participate in at least 20 hours per week in qualifying educational training activities, or to participate in workfare.

11=Fleeing felon or parole and probation violator

13=Convicted drug felon

14=Social Security Number disqualified

15=SSI recipient in California

16=Prisoner in detention center

17=Foster care

18=Member is an ineligible noncitizen and is participating in a state-funded Food Stamp Program

19=Ineligible noncitizen, originally coded as participant (code added by MPR)

20=Ineligible ABAWD, originally coded as participant (code added by MPR)

99=Unknown

FSUN1 to FSUN16   C   POSITION OF HEAD OF FOOD STAMP UNIT
Range = (0, 8)
Person 1 through Person 16
Identifies the index position of the head of the food stamp unit. The head is defined as the first person in the unit with REL=1 or, if no one in the unit has REL=1, as the first adult in the unit. If there are no adults in the unit, the oldest child is the head. FSUNi is the same for everyone in the unit. For example, if the unit head is the second person in the household, FSUNi will equal 2 for everyone in the unit.

RACETH1 to RACETH16   R   RACE/ETHNICITY
Range = (1, 5)
Person 1 through Person 16
We recommend against using RACETHi for certain state-level tabulations. See Appendix A for more details.
1=White, not of Hispanic origin
2=Black, not of Hispanic origin
3=Hispanic
4=Asian or Pacific Islander
5=American Indian or Alaskan Native

REL1 to REL16   R   RELATIONSHIP TO HEAD OF HOUSEHOLD
Range = (1, 7)
Person 1 through Person 16
1=Head of household
2=Spouse
3=Parent
4=Daughter, stepdaughter, son, or stepson
5=Other related person (brother, sister, niece, nephew, grandchild, great-grandchild, cousin)
6=Foster child
7=Unrelated person

SEX1 to SEX16   R   SEX
Range = (1, 2)
Person 1 through Person 16
1=Male
2=Female

WRKREG1 to
WRKREG16

R

WORK REGISTRATION STATUS
Range = (1, 5)
Person 1 through Person 16
**We recommend against using WRKREGi. See Appendix A
for more details.**
1=Federal exemption
3=Work registrant, not E&T participant
4=Work registrant, voluntary E&T participant
5=Work registrant, mandatory E&T participant

YRSED1 to
YRSED16

R

HIGHEST EDUCATIONAL LEVEL COMPLETED
**We recommend against using YRSEDi. See Appendix A for
more details.**
Range = (0, 14)
Person 1 through Person 16
0=None
1=Grade 1
2=Grade 2
3=Grade 3
4=Grade 4
5=Grade 5
6=Grade 6
7=Grade 7
8=Grade 8
9=Grade 9
10=Grade 10
11=Grade 11
12=High school graduate or GED
13=Post secondary education (e.g. technical education or some
   college)
14=College graduate or post-graduate degree

Person-Level Countable Income (Monthly Dollar Amounts)[33]

CONT1 to CONT16	R	COUNTABLE INCOME FROM CONTRIBUTIONS Range = (0, 1789) Person 1 through Person 16 Amount of contributions, charity, and in-kind income.
CSUPRT1 to CSUPRT16	R	COUNTABLE CHILD SUPPORT PAYMENT INCOME Range = (0, 1697) Person 1 through person 16 Court ordered child support payments received from absent parent or responsible person.
DEEM1 to DEEM16	R	COUNTABLE DEEMED INCOME Range = (0, 1013) Person 1 through Person 16 Income deemed from sponsor of a noncitizen member of the unit.
DIVER1 to DIVER16	R	COUNTABLE STATE DIVERSION PAYMENTS Range = (0, 586) Person 1 through Person 16
EDLOAN1 to EDLOAN16	R	COUNTABLE INCOME FROM EDUCATIONAL GRANTS AND LOANS Range = (0, 444) Person 1 through Person 16 Educational grants, scholarships, loans.
ENERGY1 to ENERGY16	R	COUNTABLE ENERGY ASSISTANCE INCOME Range = (0, 723) Person 1 through Person 16
GA1 to GA16	R	COUNTABLE GENERAL ASSISTANCE BENEFITS Range = (0, 1280) Person 1 through Person 16
OTHERN1 to OTHERN16	R	COUNTABLE OTHER EARNED INCOME Range = (0, 2404) Person 1 through Person 16

---

[33] Some person-level income sources have been edited to obtain consistency between final gross income (FSGRINC) and person-level income amounts.

VARIABLE	ORIGIN	DESCRIPTION
OTHGOV1 to OTHGOV16	R	**COUNTABLE INCOME FROM OTHER GOVERNMENT BENEFITS** Range = (0, 1562) Person 1 through Person 16 Includes but is not limited to Black Lung Benefits, Railroad Retirement payments, and payments to farmers by USDA.
OTHUN1 to OTHUN16	R	**COUNTABLE OTHER UNEARNED INCOME** Range = (0, 2088) Person 1 through Person 16 Includes alimony, foster care payments, dividends and interest payments, rental income, pension and union benefits.
SLFEMP1 to SLFEMP16	R	**COUNTABLE SELF-EMPLOYMENT INCOME** Range = (0, 2190) Person 1 through Person 16 Net income from any self-employment enterprise.
SOCSEC1 to SOCSEC16	R	**COUNTABLE SOCIAL SECURITY INCOME** Range = (0, 2236) Person 1 through Person 16
SSI1 to SSI16	R	**COUNTABLE SSI BENEFITS** Range = (0, 1987) Person 1 through Person 16
TANF1 to TANF16	R	**COUNTABLE TANF PAYMENTS** Range = (0, 2980) Person 1 through Person 16 Assigned to payee or principal person of assistance group.
UNEMP1 to UNEMP16	R	**COUNTABLE UNEMPLOYMENT COMPENSATION BENEFITS** Range = (0, 1987) Person 1 through Person 16
VET1 to VET16	R	**COUNTABLE VETERANS' BENEFITS** Range = (0, 1528) Person 1 through Person 16
WAGES1 to WAGES16	R	**COUNTABLE WAGES AND SALARIES** Range = (0, 4632) Person 1 through Person 16 Amount of wages, salaries, tips and commissions.

WCOMP1 to   R   COUNTABLE WORKERS' COMPENSATION BENEFITS
WCOMP16   Range = (0, 1950)
                              Person 1 through Person 16

WGESUP1 to   R   COUNTABLE WAGE SUPPLEMENTATION INCOME
WGESUP16   Range = (0, 848)
                              Person 1 through Person 16
                              Earnings above cash assistance and/or food stamp amount.

Detailed Error Findings

AGENCY1 to   R   AGENCY OR CLIENT RESPONSIBILITY
AGENCY9   Range = (1, 99)
             Variance 1 through Variance 9
             Primary cause of variance
             1=Information not reported
             2=Incomplete or incorrect information provided, agency was
               not required to verify
             3=Information withheld by client (case being referred for IPV
               investigation)
             4=Incorrect information provided by client (case being referred
               for IPV investigation)
             7=Information reported by a collateral contact inaccurate
             8=Acted on incorrect Federal computer match information that
               was not required to be verified. (This variance is excluded
               from the error determination but must be recorded.)
             10=Policy incorrectly applied
             12=Reported information disregarded or not applied
             14=Agency failed to follow up on inconsistent or incomplete
               information
             15=Agency failed to follow up on impending changes
             16=Agency failed to verify required information
             17=Computer programming error
             18=Data entry and/or coding error
             19=Mass change (The error was due to a problem with a
               computer generated mass change.)
             20=Arithmetic computation error
             21=Computer user error
             99=Other

AMOUNT1 to   R   VARIANCE DOLLAR AMOUNT
AMOUNT9   Range = (0, 10303)
             Variance 1 through Variance 9
             Dollar amount of variance.

DISCOV1 to   R   VARIANCE DISCOVERY
DISCOV9

Range = (1, 9)
Variance 1 through Variance 9
How variance was discovered.
1=Variance clearly identified from case record: documentation
   not from an automated match
2=Variance clearly identified from case record: documentation
   from an automated match
3=Variance discovered from recipient interview
4=Employer (present or former)
5=Financial institution, insurance company, or other business
6=Landlord
7=Government agency or public records, not automated match
8=Government agency or public records, automated match
9=Other

E_FINDG1 to   R   ERROR FINDING
E_FINDG9

Range = (2, 4)
Variance 1 through Variance 9
Impact of variance.
2=Overissuance
3=Underissuance
4=Ineligible

ELEMENT1 to   R   VARIANCE ELEMENT
ELEMENT9

Range = (111, 820)
Variance 1 through Variance 9
Element of variance.
111=Student Status
130=Citizenship and Noncitizen Status

APPENDIX A

**ASSESSMENT OF THE QUALITY OF SELECTED VARIABLES
IN THE FY 2004 FSPQC DATABASE**

We assessed the quality of coding for variables on the FY 2004 FSPQC datafile that are new, changed, or have a history of coding inconsistencies. We also examined the prevalence of missing or unknown values across person-level characteristic variables.

A. Person-Level Characteristic Variables with Missing or Unknown Values

We found that 8 percent of all participants and 13 percent of adult participants have a missing or unknown value for YRSEDi, so we recommend against using this variable. In addition, RACETHi has missing values for less than 1 percent of participants nationally, but a higher prevalence of missing values in two states. As a result, we recommend caution when doing state-level tabulations of RACETHi in Delaware and Vermont.

B. Food Stamp Case Affiliation (FSAFILi)

Although FSAFILi and CTZNi are consistent most of the time, some ineligible noncitizens (CTZNi=7–10) are also inconsistently coded as eligible participants (FSAFILi=1) and some eligible citizens (CTZNi=3–6) are also inconsistently coded as ineligible noncitizens (FSAFILi=4 or 18). Similarly, FSAFILi and ABWDSTi are consistent most of the time, but a small number of individuals are inconsistently coded as both eligible participants (FSAFILi=1) and as ABAWDs who have exhausted time limited benefits (ABWDSTi=7) or as both ineligible ABAWDs (FSAFILi=10) and as not ABAWDs (ABWDSTi=1).

Because more than a quarter of nonparticipants have a missing or unknown FSAFILi code, we recommend against using this variable to tabulate reasons for nonparticipants' ineligibility.

C. Citizenship Status (CTZNi)

The noncitizen codes for CTZNi changed slightly in FY 2004, although the codes for U.S.-born citizen and naturalized citizen remained the same. The distribution of reasons for noncitizen eligibility and ineligibility is similar to the distribution in previous years. Although a

small percentage of participants are still coded as ineligible noncitizens or citizenship status unknown, this has not increased over previous years. As a result, we recommend using CTZNi for tabulations, but care should be taken to avoid state-level tabulations that result in small sample sizes.

D. Work Registration Status (WRKREGi), FSP Employment and Training Program Status (EMPRGi) , and Employment Status (EMPSTAi and EMPSTBi)

EMPRGi changed in FY 2004. All the work-related variables also changed substantially in FY 2003, and we found a number of inconsistencies on the 2003 datafile. WRKREGi, for example, has valid values of 1, 3, 4, and 5, but in 2003, more than 1 percent of participants were coded as WRKREGi=2. Because we believed that other codes may have been used incorrectly as well, we recommended against using this variable.

Incorrect coding of WRKREGi does not appear to be an issue on the 2004 file. No individuals have an invalid code and only a few individuals are missing a code. However, we are limited in our ability to assess WRKREGi and did find some inconsistencies between WRKREGi and ABWDSTi.

The two employment status variables, EMPSTAi and EMPSTBi, have some inconsistencies with each other and with variables recording countable earned income. For instance, some participants with countable earned income have EMPSTAi codes indicating they are not in the labor force or are unemployed (EMPSTAi=1,2) and some have an EMPSTBi code indicating they are unemployed (EMPSTBi=1).[1] In addition, a small number of participants with EMPSTAi codes indicating they are employed (EMPSTAi≠1, 2) also have EMPSTBi codes indicating they are unemployed (EMPSTBi=1). Because of these inconsistencies, we recommend

---

[1] It is possible that some of these people were unemployed or no longer in the labor force during the month of the review, but were receiving paychecks earned during the previous month.

against using EMPSTAi and EMPSTBi for straight tabulations. As with WRKREGi, users may be able to develop algorithms that check for consistent data across several variables.

We are limited in our ability to assess EMPRGi, but, based on our assessment of the other work-related variables, we recommend against using EMPRGi for straight tabulations.

E. Nondisabled Nonelderly Childless Adults Subject to Work Registration (ABWDSTi)

The distribution of ABWDSTi codes in FY 2004 is similar to the distribution in previous years. However, there are some inconsistencies between ABWDSTi and other work-related variables. Because we have concerns about the quality of those variables, though, we are unable to assess the quality of coding for ABWDSTi.

We do recommend against using ABWDSTi for state-level tabulations due to the small sample sizes.

F. Disability (FSDIS)

Because of the change to FSAFILi on the FY 2003 file, we no longer have the person-level program participation information we previously used to help identify disabled individuals. Instead, we use unit-level information, such as receipt of SSI and reporting of medical expenses, to identify units that contain disabled members. Twenty-three percent of units on the FY 2004 datafile are identified as containing a disabled member, equal to the percentage of units with disabled members in FY 2003 but down from 27 percent in FY 2002. We recommend using FSDIS with the awareness that it probably undercounts the number of units with disabled members.

G. Standard Utility Allowance (SUA1 and SUA2), Utility Amount (UTIL)

Because of numerous coding inconsistencies, we recommended against using SUA1 and SUA2 in FY 2003. In the FY 2004 file, we implemented algorithms that adjusted UTIL if doing

so resulted in a calculated benefit that matched the raw benefit.[2] We also corrected inconsistent coding of SUA1 and SUA2 in households with matching benefits.

In households where our calculated benefit matched the raw benefit, we trusted UTIL to be correct and recoded SUA1 and SUA2 to be consistent with UTIL. In households where our calculated benefit differs from the raw benefit, we are unable to determine whether UTIL, SUA1, SUA2, or none of the three can be trusted. Consequently, some inconsistencies between UTIL, SUA1, and SUA2 remain.

Nationwide, the remaining inconsistencies between SUA1 and UTIL affect less than two percent of all households in the file. However, the percentage of inconsistent households remains higher in California (12 percent) and New York (6 percent). The remaining inconsistencies between SUA2 and UTIL affect less than half a percent of all households nationwide, and in no individual state does the percentage of households with inconsistent SUA2 values exceed two percent. We recommend using SUA1 and SUA2 for tabulations, but due to the high level of inconsistencies, we recommend against using SUA1 for state-level tabulations in California and New York.

H. Dependent Care Costs and Deduction

We recommended against using DPCOSTi on the FY 2003 file due to coding inconsistencies between the reported dependent care costs (DPCOSTi) and the reported dependent care deduction (FSDEPDED). In the FY 2004 datafile, we have implemented an algorithm to reconcile these inconsistencies in households with matching benefits.

---

[2] By matching benefit, we mean that the calculated benefit is within $25 of the recorded benefit for households where the reviewer found no errors and within $5 of the recorded benefit for households with overissuance or underissuance errors.

In households where our calculated benefit matched the raw benefit, we trusted FSDEPDED to be correct and set the total DPCOSTi equal to FSDEPDED. In households where our calculated benefit differs from the raw benefit, we are unable to determine whether the raw deduction, expenses, or neither can be trusted. Consequently, some inconsistencies between FSDEPDED and DPCOSTi remain.

Although these remaining inconsistencies affect only three percent of households that either have a positive dependent care deduction, positive dependent care costs, or both and less than half a percent of all households in the file, the percentage of inconsistent households is considerably greater in some states. Furthermore, the sample sizes of households with a dependent care deduction and/or dependent care costs is quite small in several states. Consequently we recommend using FSDEPDED and DPCOSTi with caution, and due to small sample sizes, state-level tabulations should be avoided.

I. Vehicles

Most units have no countable vehicle assets (FSVEHAST=0). Among units with positive countable vehicle assets (FSVEHAST>0), some units are coded as having no vehicles (VEHICLEA=1, VEHICLEB=1 or missing) or as having no countable vehicles (VEHICLEA=1, 2, 3, 4, 5 and VEHICLEB=1, 2, 3, 4, 5 or missing). Because VEHICLEA and VEHICLEB are not consistent with FSVEHAST, we recommend against their use.

J. Locality

Beginning with the FY 2003 FSPQC datafile, we constructed URBRUR to indicate metropolitan area, micropolitan area, or rural area.[3] Previously, this variable only distinguished between urban and rural areas. The distribution in FY 2004 is very similar to the distribution in FY 2003. Because of concerns about the representativeness of the sample at the substate level, however, we recommend caution when using URBRUR for state-level tabulations.

---

[3] Metropolitan Statistical Areas have at least one urbanized area of 50,000 or more population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. Micropolitan Statistical Areas – a new set of statistical areas – have at least one urban cluster of at least 10,000 but less than 50,000 population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. (OMB Bulletin No. 04-03)

APPENDIX B

AUTOMATED EDITS TO FSP UNITS

In any raw data file, there are often inconsistencies in the way that data are entered that can be resolved by simple algorithms. Rather than searching for these discrepancies manually, we locate and correct these inconsistencies automatically. In the FY 2004 FSPQC raw datafile, we performed the automated edits described below.

1. Miscoded Food Stamp Affiliation (FSAFILi) Codes

We checked for instances where the food stamp case affiliation codes in the raw datafile were inconsistent with other coded variables on the file such as citizenship, ABAWD status, receipt of SSI and TANF. We were able to recode many of these inconsistencies:

- The affiliation codes of California SSI recipients were set to 15.

- Obvious uses of old codes were recoded (e.g., no coded participants but TANF or SSI income present and affiliation codes of 11 or 16 which indicated receipt of TANF and SSI, respectively, in the FY 2002 files).

- If there were differences between the unit size (count of those with affiliation code of 1) and the certified household size, we checked to see which size matched the correct benefit and recoded any affiliation codes that were inconsistent with citizenship or ABAWD status.

- MFIP (Minnesota's TANF program) has different unit composition rules than the regular FSP. Specifically, SSI and TANF recipients living in the same household are treated as separate FSP units. Consequently, if a Minnesota unit of more than one person had both SSI and TANF income, we set the affiliation code of the SSI recipient to unknown (99). This affected three households.

2. Deeming Issues

In some cases, the reviewer appeared to be deeming person-level income but recording the full amount of the household gross income. If there were any ineligible noncitizens in the household (FSAFILi=4) and the sum of the person-level income equaled the unit-level gross income multiplied by the ratio of unit members to unit members plus ineligible household members, then we set the unit-level gross income to the sum of the person-level income.

3. California Households with TANF Income Equal to GA Income and Gross Income

We found several California households with both TANF and GA where the TANF amount was the same as the GA amount and also the same as the reported unit-level gross income. Believing that only one of the incomes was counted, we kept the TANF income in units with children and GA income in units without children, setting all other income to zero.

4. Vehicle Assets

We set vehicle assets to $0 in the following states because they exclude the value of all vehicles from the asset calculation: Alabama, Arizona, California, Colorado, Delaware, District of Columbia, Hawaii, Indiana, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Mississippi, Missouri, New Mexico, North Dakota, Ohio, Oregon, South Carolina, Tennessee, Washington, West Virginia, and Wisconsin.

5. Child Support Deduction

We found over 100 households where the reported child support expense deduction was exactly equal to the reported countable unit child support payment income. Although it is possible for a household to have both child support expenses and child support income, it is highly unlikely that the two would be exactly equal in value. In these households, if the sum of individual incomes, including the Child Support Payment Income, is within $5 of the reported gross income, we set the child support expense deduction equal to $0, if doing so results in a calculated net income that is within $5 of the reported net income (the $5 allows for rounding differences).

6. Dependent Care Costs[4]

The QC datafile includes a number of households where the recorded dependent care deduction is not consistent with the recorded dependent care costs. In households where we were able to match the benefit, we trusted the recorded dependent care deduction to be correct and set the costs equal to the deduction. In reconciling differences between the dependent care deduction and expenses, we adhered to the following guidelines:

- If the dependent care deduction was greater than the total value of dependent care costs, we set the costs equal to the deduction by assigning dependent care costs to unit members who originally had positive dependent care expenses. If no unit members originally had recorded dependent care expenses, we assigned costs to unit members in the following order:[5]

  1. Distribute costs evenly to unit members from age 0 to age 4 up to the maximum allowed.

  2. Distribute costs evenly to any unit members from age 5 to age 13 up to the maximum allowed.

  3. Distribute costs evenly to any unit members from age 14 to age 17 up to the maximum allowed.

  4. Distribute costs evenly to any unit members of age 18 or older who have SSI income up to the maximum allowed.

  5. Distribute costs to elderly unit members without SSI income up to the maximum allowed.

- If the deduction exceeded the maximum allowed by $25 dollars and there was a 2-year-old dependent, we gave the extra $25 to the 2-year-old.

- If a household had positive dependent care costs but no dependent care deduction, we set the recorded costs to zero.

---

[4] Households identified as MFIP or SSI-CAP participants are excluded from these edits.

[5] Since actual dependent care expenses may have exceeded the maximum possible dependent care deduction, dependent care expenses may be underestimated for some households in the FSPQC dataset.

In addition to inconsistencies between the recorded dependent care deduction and recorded dependent care expenses, we have found that QC reviewers sometimes record the dependent care expenses for the parent rather than the dependent. We corrected for this error, as follows:

- If dependent care expenses were assigned to adults between age 18 and 59 without SSI income and there were children in the unit without dependent care expenses, we set the expenses equal to zero for the adults and distributed them among the children in the following order:

  1. Distribute costs evenly to any unit members from age 0 to age 4 up to the cap.
  2. Distribute costs evenly to any unit members from age 5 to age 13 up to the cap.
  3. Distribute costs evenly to any unit members from age 14 to age 17 up to the cap.

7. SUA Usage and Proration[6]

The FSPQC datafile includes two variables that describe the use of standard utility allowances. One variable records the usage of and entitlement to SUAs (SUA1), and the other records the proration of utility allowances (SUA2). The raw QC datafile contains a significant number of households where the raw utility expense values are inconsistent with the SUA usage and proration variables. In households where the calculted benefit matched the raw benefit, we assumed the recorded utility amount to be correct. For these households, we recoded the SUA1 and SUA2 variables so that they are consistent with the utility amount. For certain cases where the coding of SUA1 contradicted what we know of state policy, we recoded SUA1 regardless of the result of the benefit calculation.[7]

---

[6] Households identified as MFIP or SSI-CAP participants were excluded from these edits.

[7] By contradictions with state policy, we mean households that are coded as receiving a type of SUA that is not actually used in the state. Although this part of the algorithm is designed to check for such contradictions in several states, only a few households in Hawaii and Guam are impacted in the 2004 file.

In most states, we checked for both full SUA values as well as half SUA values.[8]   In other words, if the utility amount equaled a full SUA value, we made sure SUA1 indicated the correct SUA type and that SUA2 was coded as "not prorated". If the utility amount equaled half of an SUA value, we made sure SUA1 indicated the correct SUA type and that SUA2 was coded as "prorated". However, in a few states that use individual standards (Alaska, Michigan, Guam, and Hawaii), we only checked for full SUA values. Households where the utility amount did not equal an SUA value or half of an SUA value were coded as using individual standards in states with individual standards and as using actual expenses in the rest of the states, as long as they were not coded as prorated.

8.   Categorical Eligibility

Several states have expanded their categorical eligibility rules so that all households benefiting from specific means-tested cash assistance programs do not need to pass the asset test or the gross- or net-income tests.   Depending on the programs that the state uses to confer categorical eligibility, this can expand categorical eligibility to a select set of households or to most households in a state. By examining household records on the raw file as well as information available from FNS, we were able to identify the conditions for several states under which a household would be identified as categorically eligible. In these states, most households were already identified as categorically eligible through the CAT_ELIG flag. We believe that additional households should have been identified as categorically eligible, but were not. We set the CAT_ELIG flag to 1 for the following states and under the following conditions:[9]

---

[8] Prorated values are not always equal to half of the full SUA value. However, because of the multitude of possible values, we are only able to check for half values.

[9] We also set the CAT_ELIG flag to 1 for all pure public assistance households.

- ***Delaware, Wisconsin***: All households with gross income under 200 percent of poverty

- ***Maine, Maryland, Massachusetts***: All households with children and gross income under 200 percent of poverty

- ***Michigan***: All households with two or more people and gross income under 200 percent of poverty

- ***Minnesota***: All households participating in MFIP

- ***North Dakota***: All households with no disqualified members and net income under 100 percent of poverty

- ***Oregon***: All households with gross income under 185 percent of poverty

- ***Texas:*** All households with gross income under 165 percent of poverty and assets less than $5,000

- ***Washington:*** All households with gross income under 130 percent of poverty

APPENDIX C

**VARIABLES THAT WERE DROPPED, SIGNIFICANTLY CHANGED,
OR NEW ON THE FY 2004 FSPQC DATAFILE**

Note: Information regarding variables on the FY 2003 FSPQC datafile can be found in the *Technical Documentation for the Fiscal Year 2003 FSPQC Database and QC Minimodel* (Ewell, Cunnyngham, and Brown, 2004).

Variables Dropped on the FY 2004 FSPQC Datafile

None

Variables Changed on the FY 2004 FSPQC Datafile

CTZNi	Citizenship Status
EMPRGi	FSP Employment and Training Program Status
SUA1	Standard Utility Allowance—Usage and Entitlement
Person-Level Variables	Person-level variables are created for up to 16 persons per household

New Variables on the FY 2004 FSPQC Datafile

ASSLIM	Asset Limit
EXCL_FSCSDED	Child Support Excluded from Gross Income (Replaces EXCL_FSCSEXP)
FSASTEST	Indicator of Passing Asset Test
FSCSDED	Child Support Expense Deduction (To be used instead of FSCSEXP (Reported Child Support Expense Deduction)
FSGRTEST	Indicator of Passing Gross Income Test
FSNETEST	Indicator of Passing Net Income Test
GROSSCRN	Gross Income Screen
SSI_CAP	Indicator of SSI-CAP Participation

APPENDIX D

DERIVATION OF WEIGHTS BY STATE AND MONTH

TABLE D.1

CALCULATED WEIGHTED COUNTS BY STATE AND MONTH

State	October 2003	November 2003	December 2003	January 2004	February 2004	March 2004	April 2004	May 2004	June 2004	July 2004	August 2004	September 2004	FY Average 2004

APPENDIX F

FY 2004 FSP PARAMETERS

TABLE F.1

FSP GROSS INCOME SCREEN, FY 2004

Household Size	Gross Income Screen (Dollars Per Month)[a]		
	Continental United States, Guam and the Virgin Islands	Alaska	Hawaii
1	$973	$1,215	$1,120
2	1,313	1,641	1,511
3	1,654	2,066	1,902
4	1,994	2,492	2,293
5	2,334	2,918	2,684
6	2,674	3,344	3,075
7	3,014	3,769	3,466
8	3,354	4,195	3,857
Each Additional	+341	+426	+392

[a] The fiscal year 2004 FSP gross income limits are based on the 2003 poverty guidelines issued by the Department of Health and Human Services. FNS derived the fiscal year 2004 gross income limits by multiplying the 2003 poverty guidelines by 130 percent, dividing the results by 12 and rounding up to the nearest dollar. The 2003 poverty guidelines were developed on the basis of the 2002 Census poverty thresholds. The gross income screen is effective from October 1, 2003 to September 30, 2004.

TABLE F.2

FSP NET INCOME SCREEN, FY 2004

Household Size	Net Income Screen (Dollars Per Month)[a]		
	Continental United States, Guam and the Virgin Islands	Alaska	Hawaii
1	$749	$935	$861
2	1,010	1,262	1,162
3	1,272	1,590	1,463
4	1,534	1,917	1,764
5	1,795	2,245	2,065
6	2,057	2,572	2,365
7	2,319	2,900	2,666
8	2,580	3,227	2,967
Each Additional	+262	+328	+301

[a] The fiscal year 2004 FSP net income limits are based on the 2003 poverty guidelines issued by the Department of Health and Human Services. FNS derived the fiscal year 2004 net income limits by dividing the 2003 poverty guidelines by 12 and rounding up to the nearest dollar. The 2003 poverty guidelines were developed on the basis of the 2002 Census poverty thresholds. The net income screen is effective from October 1, 2003 to September 30, 2004.

TABLE F.3

DEDUCTION AMOUNTS, FY 2004

Deduction	Continental U.S.	Alaska	Hawaii	Guam	Virgin Islands
Standard Deduction					
1-3 people	$134	$229	$189	$269	$118
4 people	134	229	189	269	127
5 people	149	229	189	298	149
6 or more people	171	229	197	342	171
Maximum Excess Shelter Expense Deduction	378	604	509	444	298

Source: U.S. Department of Agriculture, FNS.

The Homeless Household Shelter Estimate is $143.

The Maximum Dependent Care Deduction is $200 for each dependent under age 2 and $175 for each dependent age 2 or older.

Note: The Minnesota Family Investment Program (MFIP) has a separate food stamp benefit calculation procedure that does not include any deductions except for the earnings deduction. As a result, all the other deductions are coded as missing for MFIP participants in the FSPQC database. Similarly, deductions are not used to assign benefits to households participating in SSI Combined Application Projects (SSI-CAP) in Mississippi, New York, South Carolina, and Texas. Consequently, all deductions are coded as missing for SSI-CAP participants in these four states. Washington's SSI Combined Application Project uses some deductions, but not all. The deductions that are not applicable are coded as missing.

TABLE F.4

MAXIMUM FOOD STAMP BENEFIT, FY 2004

Household Size	Maximum Food Stamp Benefit[a]						
	Continental U.S.	Alaska Urban	Alaska Rural I	Alaska Rural II	Hawaii	Guam	Virgin Islands
1	$141	$167	$213	$259	$210	$208	$182
2	259	307	391	476	386	382	333
3	371	439	560	682	553	547	477
4	471	558	712	866	702	695	606
5	560	663	845	1029	834	826	720
6	672	795	1014	1234	1001	991	864
7	743	879	1121	1364	1106	1095	955
8	849	1,005	1281	1559	1264	1252	1092
Each Additional	+ 106	+ 126	+ 160	+ 195	+ 158	+ 157	+ 137

[a] The maximum benefit values are effective from October 1, 2003 to September 30, 2004 and are based on the cost of the Thrifty Food Plan in the preceding June for a reference family of four, rounded to the lowest dollar increment.

West Virginia	259			
Wisconsin	241	133	23	Individual single utility standards
Wyoming	315	141	32	
Guam			24	Sub-elements base on household size
Virgin Islands				Uses actual expenses only

Sources: U.S. Department of Agriculture, FNS; FY 2004 Raw QC Datafile

[a] HCSUA is a standard utility allowance used for households with heating and cooling expenses not included in rent. The HCSUA generally includes all utilities, including telephone.

[b] LUA is a standard utility allowance used for households that do not have heating and cooling expenses separate from rent. The LUA generally includes all utilities, including telephone.

[c] The telephone allowance is a standard utility allowance used for households that have telephone expenses but do not have any other utility expenses.

[d] Alaska has six different HCSUAs determined by utility regions. Because the QC data does not include a variable identifying utility regions, the shelter deduction algorithm uses all six HCSUAs, trying to identify an HCSUA that results in a matching benefit.

[e] Colorado has two HCSUAs: one for households with telephone expenses ($285) and another for households that do not have telephone expenses ($259). Until December 2003, Colorado's HCSUA was $233 for households with telephone expenses and $209 for households without telephone expenses. The telephone allowance was $24.

[f] Until April 2004, Indiana's HCSUA was $322 and LUA $155.

[g] Until May 2004, Kentucky's HCSUA was $252, LUA $183, and telephone allowance $30.

[h] Until December 2003, Maryland's HCSUA was $224, LUA $135, and telephone allowance $26.

[i] Missouri has two LUAs: one for households with telephone expenses ($100) and another for households that do not have telephone expenses ($74).

[j] North Carolina's HCSUAs are based on the total number of people living in the household, which may be greater than the number of people in the food stamp unit.

[k] Until June 2004 Tennessee's HCSUA was $187 for a household of one person, $194 for two, $201 for three, $208 for four, $215 for five, $222 for six, $229 for seven, $236 for eight, $243 for nine, and $250 for households with ten or more persons.

TABLE F.6

MFIP BENEFITS, FY 2004

Household Size	Family Wage Level (1.1 * Transitional Standard)	Transitional Standard (Cash Portion + Food Portion)	Cash Portion	Food Portion
