I. INTRODUCTION

The Food Stamp Program (FSP) is the largest domestic food and nutrition assistance program administered by the U.S. Department of Agriculture's Food and Nutrition Service (FNS), providing millions of Americans with the means to purchase food for a nutritious diet. During fiscal year 2001, the FSP served an average of 17.3 million people per month and paid out over \$15.5 billion in benefits.

The characteristics of food stamp households and the level of participation in the FSP change over time in response to economic and demographic trends and legislative adjustments to program rules. To measure the effect of these changes on the FSP, FNS relies on data from the FSP Quality Control (FSPQC) database. This database is an edited version of the raw datafile of monthly case reviews conducted by state FSP agencies to assess the accuracy of eligibility determinations and benefit calculations for the state's FSP caseload.¹ It contains detailed demographic, economic, and FSP eligibility information for a nationally representative sample of approximately 47,000 FSP units and is ideal for tabulations of the characteristics of food stamp units and for simulating the impact of various reforms to the FSP on current FSP units.

This document describes how the raw data are cleaned and edited to create the FSPQC database. It also describes how the QC Minimodel – one of FNS's food stamp microsimulation models – uses the FSPQC database to simulate the impact of various reforms to the FSP on current FSP participants. This report is designed for programmers and others who are interested in the technical development of the FSPQC database and the QC Minimodel.

¹ In this report, we refer to the original datafile as the raw datafile and the edited version as the FSPQC database

Chapter 2 provides an overview of the FSP Quality Control System, the resulting raw datafile, and the creation of the FSPQC database. This chapter, written for a nontechnical audience, is designed to give analysts and new users of the data enough general information to analyze and interpret the results of tabulations and QC Minimodel reform simulations.

Chapter 3 provides more detail on the FSPQC database file development process. This chapter describes the programs used to transform the raw data into the FSPQC database, the algorithms used to edit the data for consistency, and the development of the weights for the file.

Chapter 4 provides a technical description of the procedures used to transform data elements from the FSPQC database into the data elements required as inputs to the QC Minimodel, and documents the database-specific portions of the QC Minimodel.²

Chapter 5 is the codebook for the FY 2001 FSPQC database. For each variable in the database, the codebook lists the variable name, its origin, and a variable description that includes all the valid values of the variable. This chapter also explains how to use the codebook.

Appendix A contains an assessment of the quality of selected variables in the FY 2001 FSPQC database. Users should read this appendix before using the FSPQC database as it recommends that some variables not be used. Appendix B describes the automated edits to FSP units. Appendix C shows the derivation of monthly sampling weights used in the FSPQC file. Appendix D contains the parameter values used to determine FSP eligibility in fiscal year 2001. Appendix E lists the state and region identification codes used in the file. Appendix F describes the SSI Indicator variable. Appendix G contains the Integrated Review Schedule – the coding form on which the raw data are originally recorded by the state QC System reviewers.

² Documentation of the generic portions of the QC Minimodel can be found in the *1996 MATH SIPP Programmer's Guide, Technical Description, and Codebook* (Sykes, 2001).

Key Changes from the FY 2000 FSPQC Database

For the FY 2001 FSPQC, we changed the way we calculated several variables and the coding for other variables was modified.

- We created a new SSI Indicator, **SSIINDi**, to indicate the probable intended recipient of unit SSI income. We modified the algorithms for DISi and FSALLPA to include SSIINDi. See Appendix F for more information.
- We used the code **FSAFILi=17** as an additional indicator of categorical eligibility when identifying Pure PA units for FSALLPA.
- The codes for **DPCOSTi** are now the actual reported dependent care cost rather than a range. We still recommend that DPCOSTi be used with caution due to inconsistencies with FSDEPDED.
- The codes for **VEHICLEA** and **VEHICLEB** were completely revised. We recommend against using these variables due to coding inconsistencies.

Two of the variables that we previously recommended against using show significant improvement in the FY 2001 FSPQC database.

- We recommend using **CTZNi** to identify categories of noncitizens on the national level as well as to distinguish between citizens and noncitizens. We recommend against using **CTZNi** to identify categories of noncitizens on the state level.
- We recommend using **ABWDSTi** to identify nondisabled nonelderly childless adults who are subject to work registration and time limits. However, we do not recommend using **ABWDSTi** to identify the reason those individuals were allowed to participate.

See the FY 2001 FSPQC Codebook in Chapter 5 for details on variable codes and Appendix A for more information about coding inconsistencies.

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

II. OVERVIEW OF THE QC DATABASE

The FSPQC database is an edited version of the raw datafile generated by the Food Stamp Program's Quality Control System. The FSPQC database contains detailed demographic, economic, and FSP eligibility information for a nationally representative sample of approximately 47,000 FSP units.¹ These data, which are produced annually, are well suited for tabulations of the characteristics of food stamp units and for simulating the impact on current FSP units of various reforms to the FSP. This chapter provides an overview of the raw datafile and the processing and edits that convert it to the FSPQC database.

A. THE QUALITY CONTROL SYSTEM

The raw datafile is generated from the monthly quality control reviews of FSP cases conducted by state FSP agencies as part of the Quality Control System. The primary objective of the Quality Control review is to assess the accuracy of eligibility determinations and benefit calculations. That is, a quality control review is designed to determine (1) if units are eligible for participation and if they are receiving the correct benefit amount, or (2) if unit participation is correctly denied or terminated. Quality control reviews are essentially an audit through which states are held accountable for the accuracy of FSP certification.

¹ The term “FSP unit” refers to individuals who together are certified for and receive food stamps. References in the text to “unit” refer only to individuals who are in the FSP unit selected for the FSPQC sample. The term “FSP household” refers to all individuals who reside together in a household that contains at least one FSP unit. An FSP household may contain multiple FSP units and/or individuals who do not receive food stamps. References to “household” refer to the FSP unit as well as other individuals in the same household as the FSP unit.

The Quality Control System is based on a national sample of participating units and a somewhat smaller number of denials and terminations. The national sample of participating units is stratified by month and by the 50 states, the District of Columbia, Guam, and the Virgin Islands. Annual state samples range from 300 to 2,400 reviews, depending on the size of the monthly participating caseload.

Data in the active case file are collected by state quality control reviewers who gather financial and demographic information from the sampled household's case file, visit the household and re-interview the participants, determine whether the household received the correct FSP benefit amount, enter all review information on a data coding form, and then send the coding form to FNS's national computer center where it is entered into the raw datafile. FNS regional offices then conduct a federal re-review of a subsample of the original state sample. Federal re-review data are sent to the national computer center where they are entered into the raw datafile and used in conjunction with the state review data to calculate the official payment error rate for each state. States are sanctioned or rewarded on the basis of their official payment error rates.

Beginning with the 1998 raw datafile, the data coded is the financial and demographic information collected during the review. The exception is the authorized benefit amount, which is the benefit determined by the caseworker. If the authorized benefit amount varies by over \$25 from the correct benefit amount, as determined by the reviewer, the amount of the difference is also entered in the raw datafile. Prior to 1998, the data coded was the information used by the state caseworker to determine eligibility.

Although the primary objective of the Quality Control System is calculating state payment error rates, the resulting raw file also functions as an important source of detailed demographic and financial information on a large sample of active food stamp households in a given fiscal

year. The FSPQC database is the source for FNS's annual report entitled *Characteristics of Food Stamp Households* and for FNS's QC Minimodel, a microsimulation model that estimates the impact of proposed reforms to the FSP on current participants.

B. THE RAW DATAFILE

Each month, food stamp agencies in the 50 states, the District of Columbia, Guam, and the Virgin Islands draw two samples: one of households receiving food stamps (active cases), and another smaller sample of households that were either terminated from the program or applied for the program but were denied benefits. Only the datafile of active cases is used to create the FSPQC database. While most participating food stamp units are subject to sampling in the active case file, certain types of units that are not appropriate for review are excluded. Specifically, the active case universe excludes cases in which the participants:

- Died or moved outside the state;
- Received benefits by a disaster certification authorized by the FNS;
- Received benefits under a 60-day continuation of certification;
- Were under investigation for FSP fraud (including those with pending fraud hearings);
- Were appealing a notice of adverse action and the review date falls within the period covered by continued participation pending hearing; or
- Received restored benefits in accordance with the FNS-approved state manual but who were otherwise ineligible.

The sampling unit within the active universe is the food stamp unit as defined in an FNS-approved state manual.

State sampling plans must conform to accepted principles of probability sampling. A state may use simple random sampling or any of various complex designs that best meet its needs. Sampling designs other than simple random sampling must be approved by FNS.

The standard minimum annual state sample sizes range from 300 to 2,400 reviews depending primarily on the size of the monthly participating caseload. States must use the following guidelines when determining their standard annual QC sample sizes:

- If the average monthly caseload is under 10,000, then the minimum sample size is 300 cases per year.
- If the average monthly caseload is 60,000 or over, then the standard minimum sample size is 2,400 cases per year.
- If the average monthly caseload is between 10,000 and 60,000, the standard minimum sample size is derived by the following formula:

$$\text{Standard minimum} = 300 + 0.042 (N - 10,000)$$

where N is the average monthly caseload

A state may choose an optional minimum sample size if it agrees not to dispute later payment error rate findings and the associated sanctions on the basis of the precision of the estimates. Optional minimum sample sizes are determined as follows:

- If the average monthly caseload is under 12,942 then the optional minimum sample size is 300.
- If the average monthly caseload is 60,000 or over, then the optional minimum sample size is 1,020.
- If the average monthly caseload is between 12,942 and 60,000, the optional minimum sample size is derived by the following formula:

$$\text{Optional minimum} = 300 + 0.0153 (N - 12,941)$$

where N is the average monthly caseload

C. CREATION OF THE FSPQC DATABASE

We create the FSPQC database from the raw datafile of active cases through four steps: (1) preliminary processing, (2) data editing, (3) variable construction, and (4) weighting.

1. Preliminary Processing

We first convert the raw datafile into a SAS file. We then generate and inspect a series of quality control counts and frequency distributions for the values of each variable on the file. We assign missing value codes to data that are out of range, missing from the file, or coded as unknown on the source file. Records coded as having an incomplete QC review are removed from the file.²

2. Data Editing

Consistent measures of unit size, income, and benefit level are very important to any analysis of food stamp households. However, data for these measures are inconsistent for a number of records on the raw datafile. For instance, the sum of the income of each person in the unit may not equal reported gross income. Such inconsistencies can be based on the initial case record information, the transcription and data entry process, or the extraction of the food stamp information for the selected months. In the data editing step, we look for such inconsistencies in reported data and then correct them.

The overall strategy of the editing process is to ensure that certain basic relationships hold for all cases. The two most basic relationships that should hold for the reported program variables are:

- Net income must equal gross income minus the total deductions for which the unit is eligible.
- The food stamp benefit level must equal the maximum benefit for that unit size minus 30 percent of net income.

² Records with an incomplete review are defined as REVDISP not equal to 1 (1=review complete).

In addition, several key relationships must hold for some final and intermediate variables. For example:

- Unit size must equal the number of people coded as affiliated with the food stamp case under review.
- Gross unit income must equal the sum of all person-level income amounts.
- Earned income deduction must equal 20 percent (rounded down) of unit earned income.
- Medical deduction must equal medical expenses over \$35 for units with an elderly or disabled person.
- Excess shelter deduction must equal shelter costs above 50 percent of gross income minus all other deductions up to a cap. Units that contain elderly or disabled members are not subject to the cap.
- Total deductions must equal the sum of the standard deduction and any earned income deduction, medical deduction, excess shelter deduction, dependent care deduction or child support expenditure.

The process by which the editing program determines whether a case is internally consistent and performs edits if the case is not consistent is fairly complex and is described in detail in Chapter 3.

3. Variable Construction

We construct a number of variables from the reported data once the file is edited. The major classes of constructed variables are unit-level income variables, FSP eligibility and benefit determination variables, characteristics flags, and geographic region variables.

- ***Unit-level income variables.*** The total FSP unit income variable for each type of income (e.g., TANF, Social Security) is constructed by summing the person-level income of that type over all individuals in the FSP unit. The total FSP unit gross income, earned income, and unearned income variables are constructed by summing all the appropriate unit income variables.
- ***FSP eligibility and benefit determination variables.*** Variables used to determine eligibility and benefits--such as FSP unit deductions, FSP unit net countable income,

and FSP unit benefits--are constructed on the basis of unit income and demographic characteristics.

- ***Characteristics flags.*** Characteristics flags are created to identify units with certain features, such as the presence of an elderly or disabled person. In addition, data from the Area Resource File (ARF) are merged to identify whether a unit resides in an urban or rural area.

4. Weighting

We weight the observations on the file so that they replicate the monthly number of FSP units by state, as reflected in the FSP Program Operations data. Program Operations figures are derived from FNS's National Data Bank and reflect actual levels of participation and benefit issuance. Thus, the weighted number of units on the FSPQC database matches the actual number of participating units for each state. We do not create a person-level weight; so weighted FSPQC database estimates of the number of FSP participants do not necessarily match Program Operations totals.³

D. FINAL QC DATABASE

After we create the FSPQC database, we create a SAS version and two binary versions of the file. The SAS file is used for tabulations of the characteristics of FSP households. One binary file is used to tabulate the characteristics of FSP households with Table Producing Language software, and the other binary file is used as the underlying database for FNS's QC Minimodel.

³ Sampling error should cause random differences between FSPQC database estimates of the number of FSP participants and the actual number of FSP participants. However, the FSPQC database consistently overestimates the number of FSP participants and consistently underestimates total FSP benefits. The discrepancies are small in magnitude and consistent in their direction. A detailed discussion of this anomaly and its possible causes are described in a memorandum to Alana Landey and Jenny Genser of FNS from Mike Stavrianos of MPR ("Investigation of the Differences Between QC Database and Program Operations Counts of FSP Participants and Benefits," 3/5/96).

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

III. FISCAL YEAR 2001 FSPQC FILE DEVELOPMENT PROCESS

A. DEVELOPING THE FSPQC FILE

The following is a description of the programs and data used in the development of the 2001 FSPQC file.¹ The development process is also illustrated in Figure III.1.

Step 1.

The 2001 FNS data was downloaded from a cartridge to PC disk:

INPUT TAPE: Cartridge labeled, Character format (EBCDIC)
Record length 2,250; Block size 22,500
54,722 Records

OUTPUT FILE: IQCS2001.DAT (ASCII, 54,722 Records)

Step 2.

Specified fields from the raw FNS file were converted to SAS format, the unique record identifier HHLDNA was created, and stratum codes were corrected to reflect FN S's updated specifications.

PROGRAM NAME: SASIFY01.SAS

INPUT FILE: IQCS2001.DAT (ASCII, 54,722 Records)

OUTPUT FILE: QCFY2001_1.SD7 (54,700 Records, 673 Variables)

Step 3.

Preliminary frequencies were run on the SAS file. The frequencies were checked for evidence of data corruption, consistency across areas and months, and the extent of missing and out-of-range data.

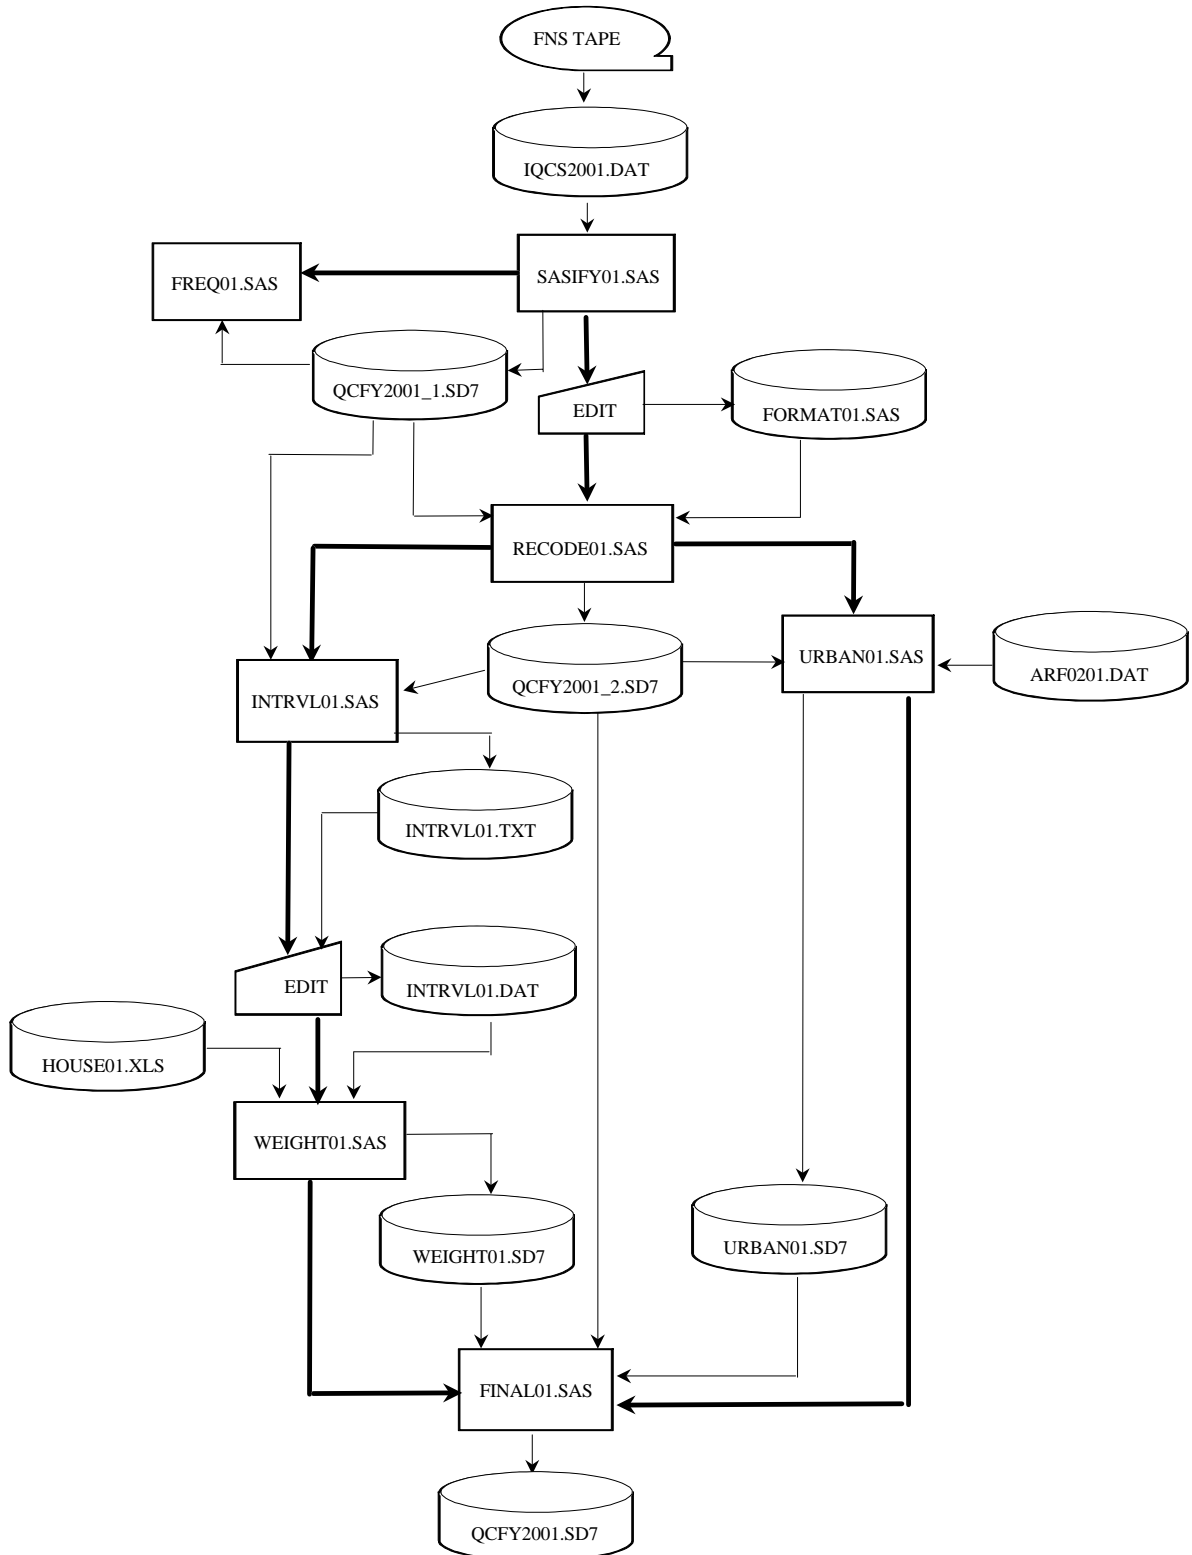

PROGRAM NAME: FREQ01.SAS

INPUT FILE: QCFY2001_1.SD7 (54,722 Records, 673 Variables)

¹ A copy of the computer programs used in the development of the FY 2001 FSPQC database is available upon request from FNS.

FIGURE III.1

FISCAL YEAR 2001 FSPQC FILE DEVELOPMENT PROCESS

Step 4.

A hand-entered format library containing format values for maximum benefit and income screen was constructed. This program was used in Step 5.

OUTPUT PROGRAM: FORMAT01.SAS

Step 5.

An edit program created several unit-level variables pertaining to FSP affiliation, income deductions, shelter limit, benefit amount, assets, poverty status, and specific types of income. Income and asset values that were considered out-of-range were set to missing. Inconsistencies between person-level income totals and reported totals were detected and resolved using a procedure that first selects the most appropriate unit-level income and deduction amounts, then edits the person-level income amounts so that the totals will match the selected amounts. This procedure is described in detail below (see “Obtaining File Consistency”). Units meeting the following conditions were written to the output file: (1) completed review; (2) contain at least one FSP participant under review; and (3) receive a benefit amount of at least one dollar.

PROGRAM NAME: RECODE01.SAS

INPUT FILES: QCFY2001_01.SD7 (54,722 Records, 673 Variables)
 FORMAT01.SAS (Format library)

OUTPUT FILES: QCFY2001_2.SD7 (47,009 Records, 633 Variables)

Step 6.

A file was created containing State name, FIPS code, and stratum, with one record per State/stratum combination.

PROGRAM NAME: INTRVL01.SAS

INPUT FILES: QCFY2001_1.SD7 (54,722 Records, 673 Variables)

OUTPUT FILE: INTRVL01.TXT (ASCII, 91 Records)

Step 7.

The INTRVL01.TXT file was edited by hand to add interval information (obtained from FNS) for each State/stratum combination. The edited file was saved as INTRVL01.DAT.

INPUT FILE: INTRVL01.TXT (ASCII, 91 Records)

OUTPUT FILE: INTRVL01.DAT (ASCII, 91 Records)

Step 8.

A weight was calculated for each State/stratum/month combination.

PROGRAM NAME:	WEIGHT01.SAS	
INPUT FILES:	QCFY2001_1.SD7	(54,722 Records, 673 Variables)
	QCFY2001_2.SD7	(47,009 Records, 633 Variables)
	INTRVL01.DAT	(ASCII, 91 Records)
	Program Info 2001.XLS	(FNS Excel spreadsheet containing participation numbers)
OUTPUT FILE:	WEIGHT01.SD7	(828 Records, 12 Variables)

Step 9.

Using the local area code, a county FIPS code was assigned to each unit on the FSPQC file. Then each unit was merged to the 2001 Area Resource File (ARF) using State and county codes. The PMSA code on the ARF file was used to create an urban/rural status variable.

PROGRAM NAME:	URBAN01.SAS	
INPUT FILES:	QCFY2001_2.SD7	(47,009 Records, 633 Variables)
	ARF0201.DAT	(ASCII, 3,224 Records) (2001 Area Resource File.)
	FIPS_LAC.TXT	(ASCII, 4,557 Records, 6 Variables) (Concordance of local area codes, updated in 2001.)
OUTPUT FILE:	URBAN01.SD7	(47,009 Records, 6 Variables)

Step 10.

The files containing weights and urban/rural flags were merged with the edited FSPQC file, to produce the final Fiscal Year 2001 FPSQC file.

PROGRAM NAME:	FINAL01.SAS	
INPUT FILES:	QCFY2001_2.SD7	(47,009 Records, 633 Variables)
	WEIGHT01.SD7	(828 Records, 12 Variables)
	URBAN01.SD7	(47,009 Records, 6 Variables)
OUTPUT FILE:	QCFY2001.SD7	(47,009 Records, 610 Variables)

Step 11.

Using the final FSPQC SAS file, this step creates a hierarchical binary file for the QC Minimodel. Here SAS missing values are coded to negative values.

PROGRAM NAME:	MINIQC01.SAS	
INPUT FILES:	QCFY2001.SD7	(47,009 Records, 610 Variables)
OUTPUT FILE:	MATHPC.BIN	(47,009 Household records, 122,474 Person records)

Step 12.

Using the final FSPQC SAS file, this step creates a hierarchical binary file which is to produce tables with Table Producing Language software. The program also creates a codebook for the Table Producing Language software. SAS missing values are coded to negative values. Additional household level recodes are created for use in table generation.

PROGRAM NAME:	QC2TPL01.SAS	
INPUT FILES:	QCFY2001.SD7	(47,009 Records, 610 Variables)
OUTPUT FILE:	QC2TPL01.BIN	(47,009 Household records, 122,474 Person records)
	QC2TPL01.CBK	

B. OBTAINING FILE CONSISTENCY

To obtain the highest possible degree of consistency between person-level and unit-level data, while at the same time maintaining the integrity of the database, it is necessary to perform selected editing of the reported data. Since fiscal year 1989, we have implemented a consistent editing scheme as submitted to FNS (“Strategies for Editing the Food Stamp Quality Control Data”, April 1989, Patty Anderson). The following is a brief description of the procedures used to obtain file consistency. For more detail, please refer to the RECODE01.SAS program.

The first task is to reconcile unit size with the number of people receiving food stamps. Checks are then made for out-of-range income values for each affiliated person, and out-of-range

asset values for each unit. For person-level income values, any amount that is over 2.5 times the poverty level is set to missing. For unit assets, the upper limit is 2.5 times the asset limit, and any asset value above the upper limit is set to missing. The next task is to reconcile reported person-level income amounts with calculated and reported unit-level income and deduction variables. To reconcile any differences in these measures, the following steps are performed (Figures III.2 and III.3):

- (1) We first use the affiliation flags on each person in the unit to construct a measure of unit size as the number of members in the food stamp unit under review. A person is considered to be in the food stamp unit if FSAFIL_i is between 10 and 20.
- (2) We then construct a measure of unit gross income by adding together all affiliated persons' earned incomes that are not exempt (earned income amounts for students under 18 are excluded) and unearned incomes. Earned income variables are WAGES_i, SLFEMP_i and OTHERN_i. Unearned income variables are SSI_i, TANF_i, CONT_i, DEEM_i, OTHGOV_i, EDLOAN_i, OTHUN_i, SOCSEC_i, GAI_i, UNEMP_i, VET_i, WCOMP_i, and CSUPRT_i.
- (3) We construct two different scenarios for the correct FSP benefit. For the first scenario, called Series 1, we use reported unit gross income and the reported earned income deduction, and then calculate net income and benefit values. For Series 2, we use reported person-level gross income, calculate the earned income deduction, and then calculate net income and benefit values. For both scenarios, the standard, medical, and dependent care deductions and child support expenses are identical.
- (4) We then compare each scenario to the reported values of gross income, net income and benefits that are on the data file, to determine which scenario is most consistent with the reported values.

If the reported person-level total gross income (Series 2) is equal to reported unit gross income (Series 1), we use Series 2 values.

If the Series 1 net income and benefit values are both equal to their respective reported values, and either the Series 2 net income or the Series 2 benefit is equal to its respective reported values (but both do not match), we use Series 1 values.

If either the Series 1 net income or the Series 1 benefit is equal to the respective reported value, and neither the Series 2 net income nor the Series 2 benefit matches their respective reported values, we use Series 1 values.

FIGURE III.2
QC EDITING SCHEME

- A: Determine FSP unit size
- B: Sum income across persons
- C: Calculate alternative unit-level (SERIES 1) and person-level (SERIES 2) income and benefit amounts

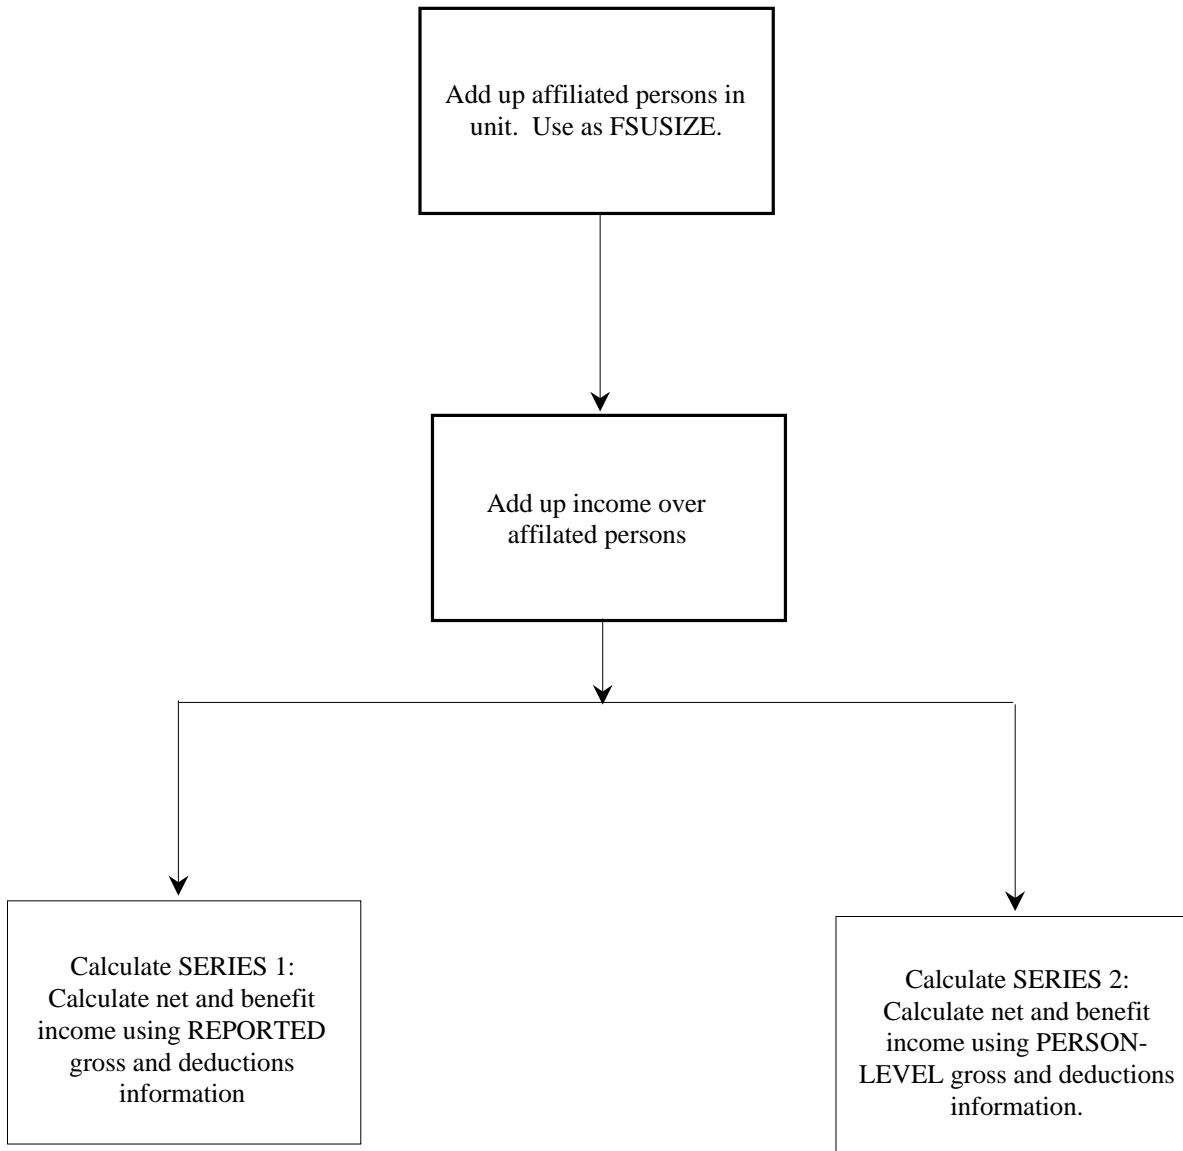

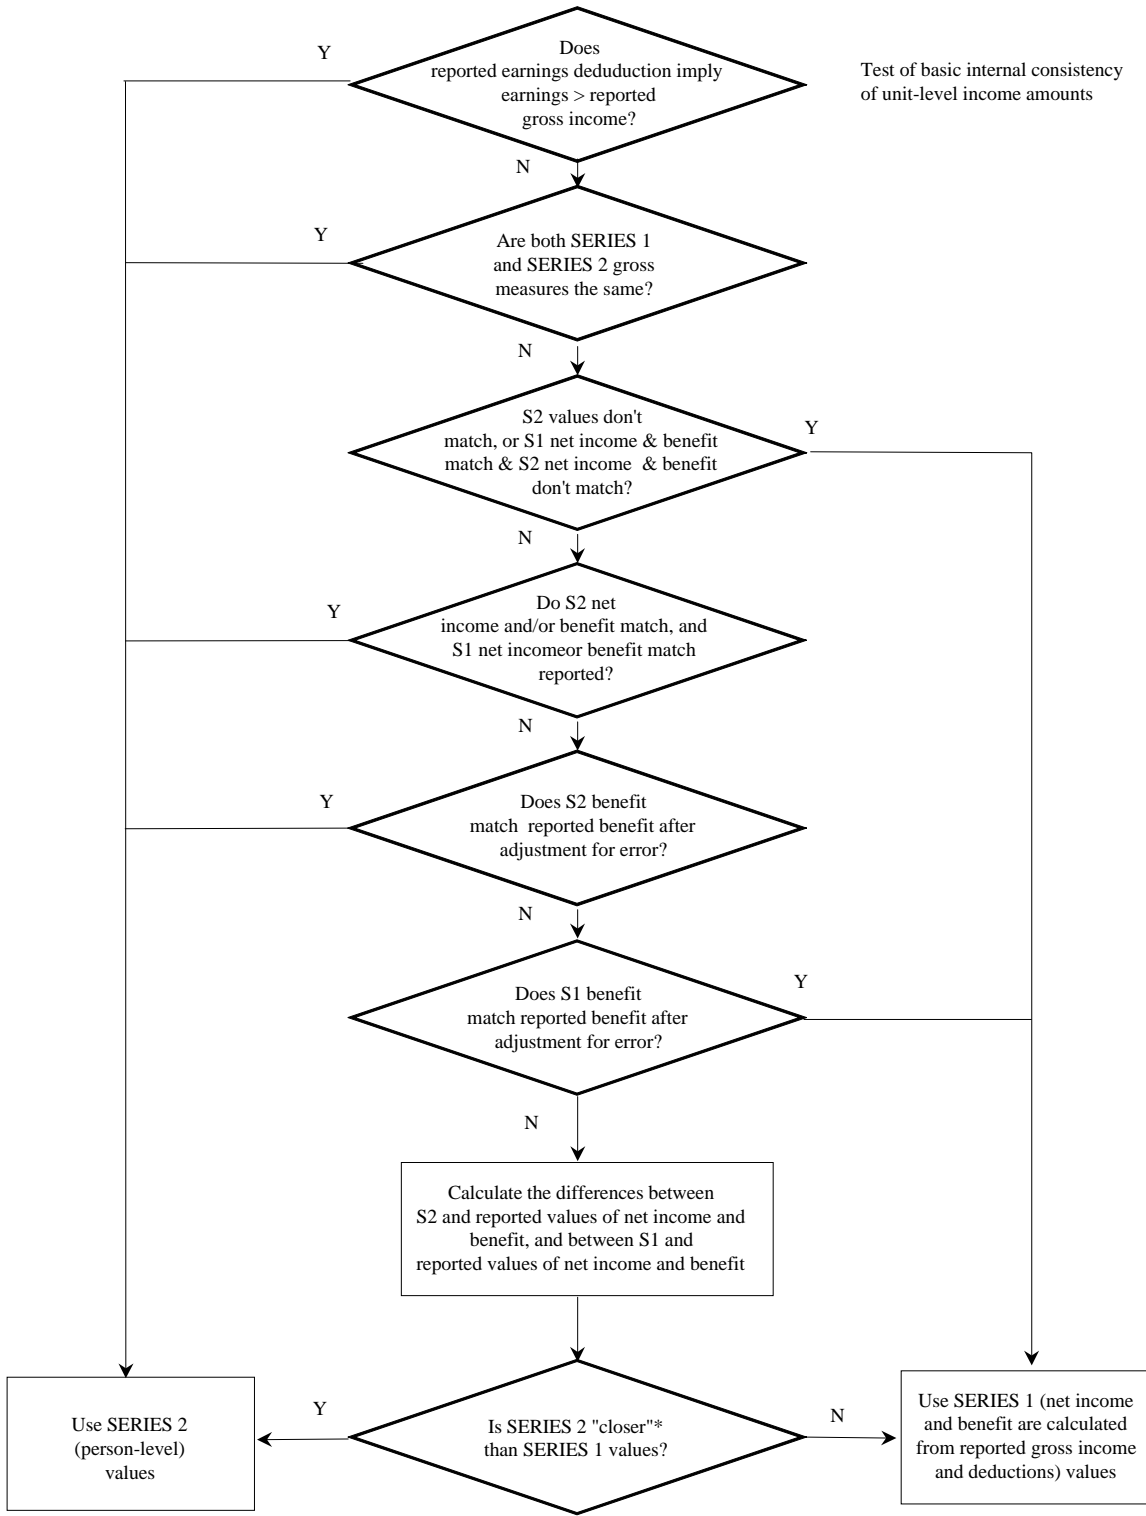

FIGURE III.2 *continued*

D: Determine which series is most consistent with reported bonus and net income and choose that gross income

* "Closer" means $(S2 \text{ benefit} - \text{report benefit})^2 + (S2 \text{ net income} - \text{report net income})^2 < (S1 \text{ benefit} - \text{report benefit})^2 + (S1 \text{ net income} - \text{report net income})^2$

FIGURE III.2 *continued*

E. Reconcile the person-level earnings with the selected earned income deduction (as decided in D)

F. Reconcile the person-level unearned income with the selected gross income (as decided in D)

G. Calculate all final values

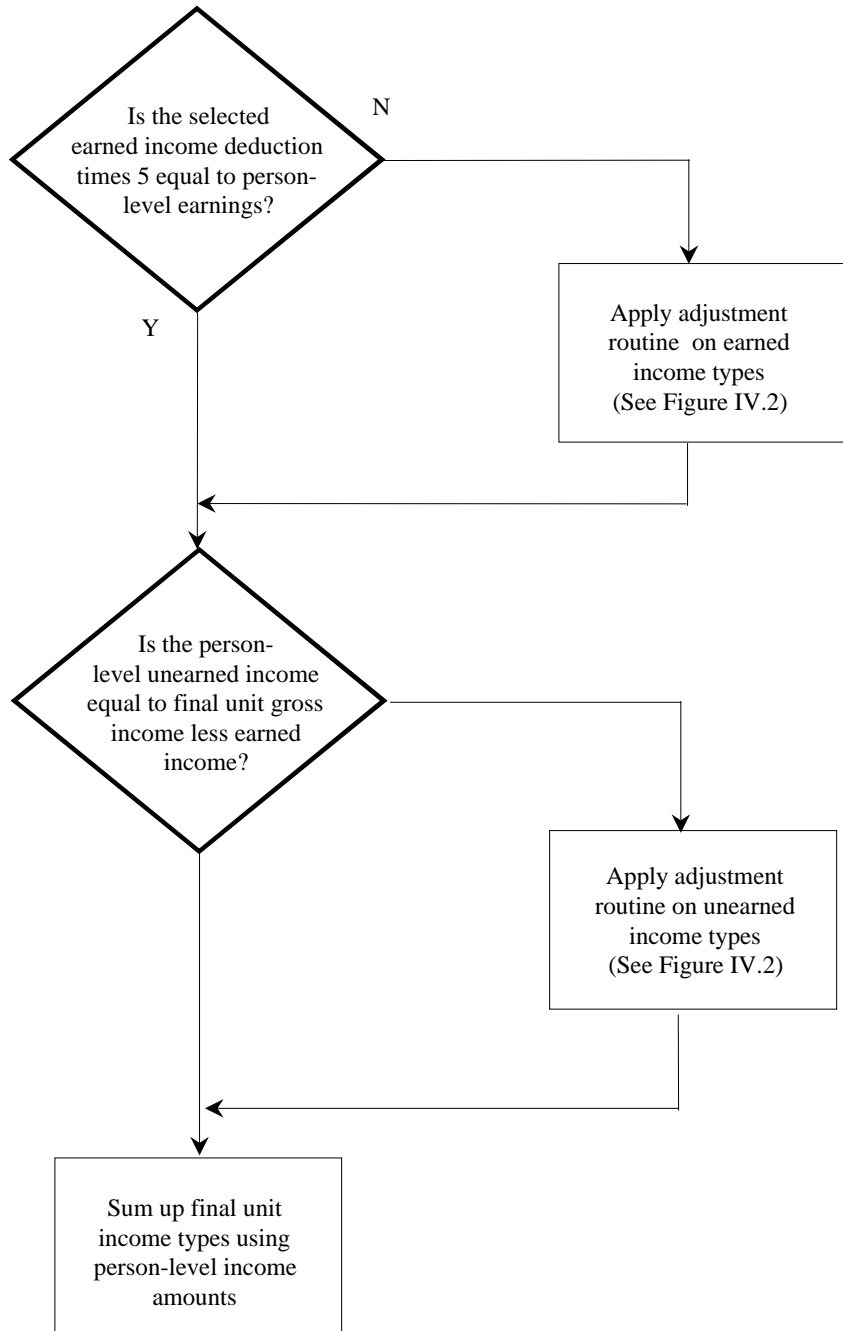

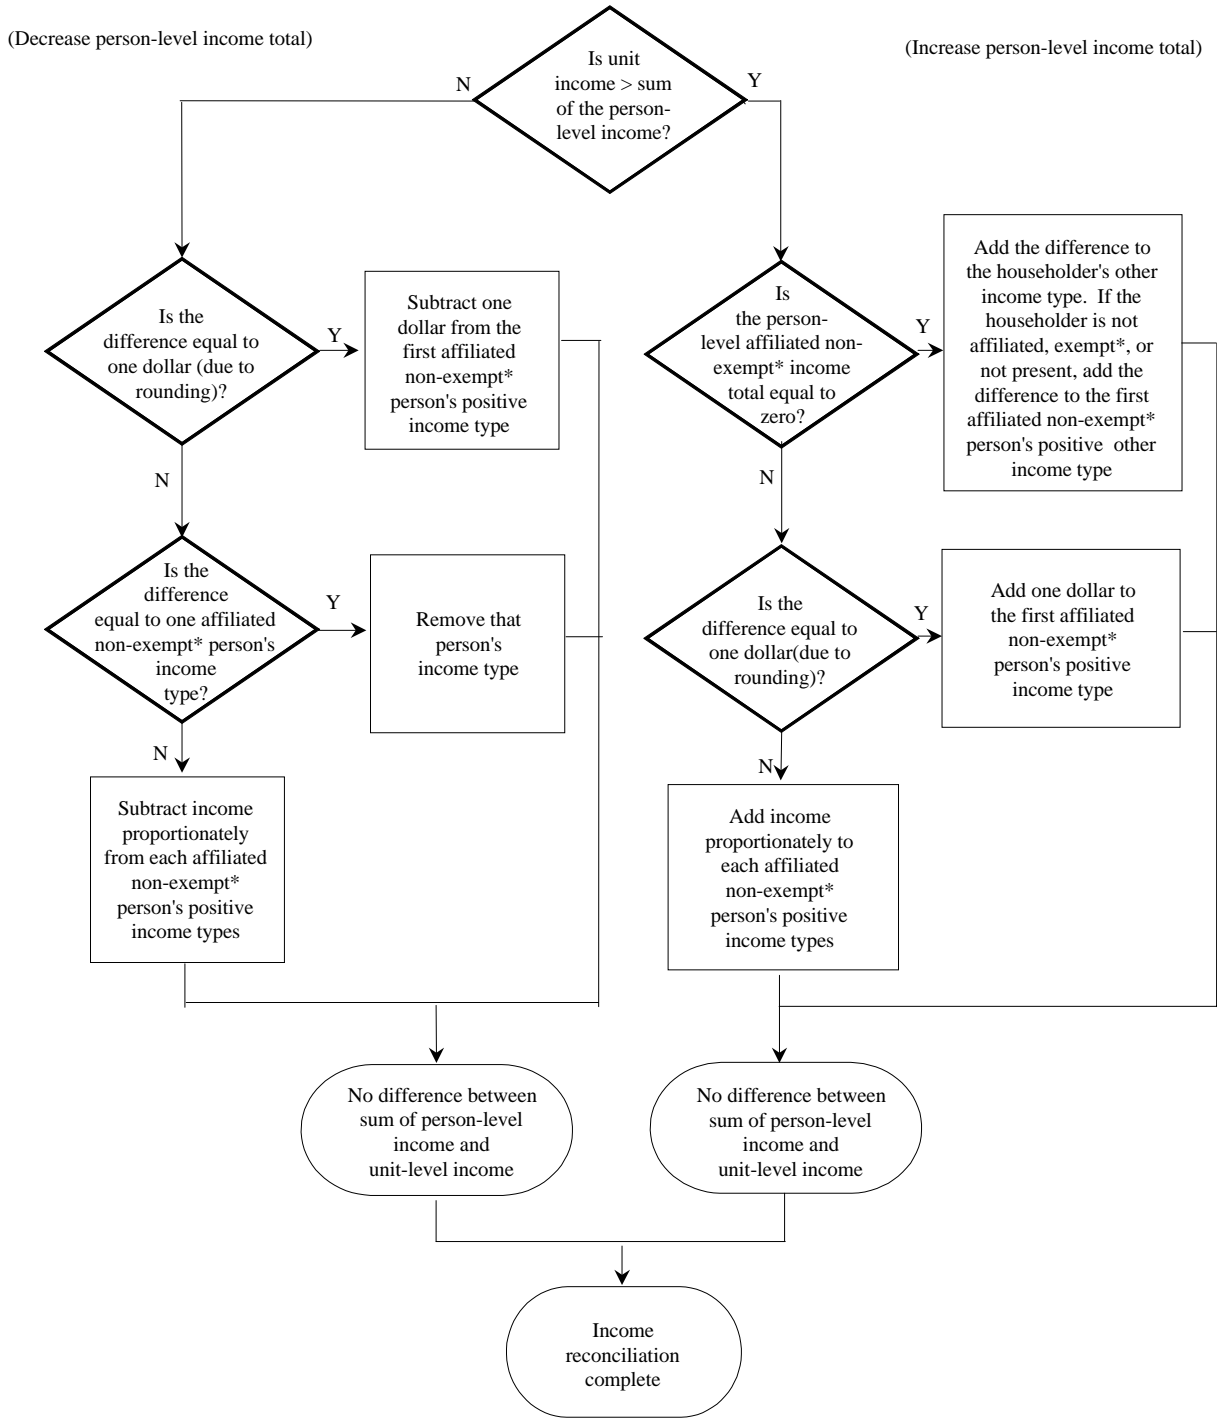

FIGURE III.3

PERSON-LEVEL INCOME ADJUSTMENT ROUTINE

Adjust person-level earned and/or unearned income amounts to match final unit gross income

* Exempt status is attributed to students under 18 years of age, and is applied to earned income amounts only. Earned income types for exempt persons are not included as part of unit income.

If either the Series 1 net income or the Series 1 benefit is equal to the respective reported value, and both the Series 2 net income and benefit values match the corresponding reported values, we use Series 2 values.

If either the Series 1 net income or the Series 1 benefit is equal to the respective reported value, or if neither the Series 1 net income nor the Series 1 benefit is equal to the respective reported value, and either the Series 2 net income or the Series 2 benefit matches the corresponding reported value, then we use Series 2 values.

If none of the above conditions have been satisfied, we compare the reported benefit amount, adjusted for error, to the Series 1 and Series 2 benefit amounts. If the Series 2 benefit is equal to the reported benefit after adjustment, we use the Series 2 values; otherwise, if the Series 1 benefit is equal to the reported benefit amount after adjustment, we use the Series 1 values. If a series still has not been chosen, we choose the series that minimizes the following error measure: (modeled benefit – reported benefit) + (modeled net income - reported net income).

- (5) We reconcile person-level earnings with the chosen earned-income deduction if necessary. If no earnings are reported but the earned income deduction implies positive earnings, we add the difference to the householder's "other earned income"; if the householder is not affiliated, is exempt, or is not present in the unit, we add the difference to the first affiliated non-exempt person's "other earned income". If positive earnings are reported but do not match the earning value implied by the chosen earned income deduction, we proceed with the following adjustments: If the difference is one dollar (due to rounding), we adjust the first affiliated non-exempt person's positive earnings by a dollar. If the difference is greater than a dollar and is equal to one person's positive earnings amount, we remove that person's earnings amount. Otherwise we adjust each positive earnings value by a proportional amount, for each affiliated non-exempt person.
- (6) Person-level unearned income amounts are reconciled with the chosen gross income less earned income measure in the same manner as the person-level earned income amounts.
- (7) Lastly, we sum all person-level income amounts to obtain final unit-level income totals.

C. DERIVATION OF SAMPLING WEIGHTS

The FSPQC file contains two weight variables: (1) the monthly weight (HWGT), and (2) the full-year weight (FYWGT). HWGT is the monthly weight used to replicate the monthly caseload amounts as reflected in Food Stamp Program Operations data. FYWGT is HWGT/12 and can be used to perform full-year tabulations on the FSPQC data.

The tables in Appendix C show the original monthly weights (HWGT) and their derivation for each state and stratum. In states and months without a stratified sample, the weight for each FSP unit (column h) equals the caseload derived from program operations data (columns e and f) divided by the number of cases in the edited sample in that state and month (column g). In states and months with a stratified sample, weights for each stratum are calculated in the same manner as states without a stratified sample. First, though, each stratum's unedited caseload (column c) is adjusted proportionally so that the sum of the new strata's caseloads (column f) equals the state's *reported* caseload (column e). The weight for each FSP unit in each stratum (column h), then, equals the stratum's adjusted caseload (column f) divided by the number of cases in the edited sample in that stratum and month (column g).

The second weight variable, FYWGT, was created in order to do full-year calculations on the data. FYWGT is created by summing up HWGT for the available months and then dividing by the number of months. For fiscal year 2001, 12 months worth of data existed for all states. Therefore, FYWGT is simply $HWGT/12$.

IV. DEVELOPMENT OF THE 2001 QC MINIMODEL

The QC Minimodel uses a series of algorithms to simulate eligibility, benefits, and participation in the Food Stamp Program. Together, these algorithms comprise the Food Stamp Module (FSTAMP). Some of the algorithms in the FSTAMP module are specific to the input data source (CPS, SIPP, or QC), while others are database independent. This section documents the algorithms that are specific to the FSPQC database. The database-independent algorithms are documented in the *MATH SIPP Programmer's Guide, Technical Description and Codebook* (Schechter, Sykes, Schmitt, 1997).

In addition, this section provides a technical description of the procedures used to transform data elements from the FSPQC database into the data elements required as input to the database-independent algorithms of FSTAMP.

A. CREATE MATH-STYLE VERSION OF FSPQC DATABASE

1. INTRODUCTION

The QC Minimodel requires a standard binary file in a particular format (MATH¹ style) as input. This section describes the procedure used to create the binary file from the SAS version of the FSPQC database.

2. USER PARAMETERS

None.

¹ MATH stands for Micro Analysis of Transfers to Households.

3. PROGRAMMER'S GUIDE

a. Input files

QCFY2001.SD7 Final FSPQC database file, in SAS format.

b. Output files

MATHPC.HDR ASCII header file that describes the record layout of the database file,
MATHPC.BIN

MATHPC.BIN QC database file in standard binary form, in a hierarchical format
(household record then person records for individuals in the
household)

d. Programs

MINIQC01.SAS

e. Output Variables

The variables are the same as those in the FSPQC data file in SAS format.

4. TECHNICAL DESCRIPTION

The following is a brief description of the procedures used to create a MATH-style version of the FSPQC database. For more detail, please refer to the MINIQC01.SAS program.

Create a hierarchical file in standard binary format with one household record per record in the SAS dataset. Create one person record for each person in the FSP unit. Convert proprietary SAS missing data codes as follows:

- . -1 (blank on raw QC file)
- .A -2 (coded by MPR as out of range)
- .B -3 (coded by QC reviewer as unknown)
- .C -4 (unable to construct variable)
- .D -5 (household participating in month not certified)

Edit by hand the MATHPC.HDR file so that its record layout matches the output statement in MINIQC01.SAS.

B. QC-SPECIFIC PORTION OF THE QC MINIMODEL

1. INTRODUCTION

The QC Minimodel software is segregated into database-independent (generic) and database-specific components. The generic portions of the QC Minimodel are documented in the *1996 MATH SIPP Programmer's Guide, Technical Description, and Codebook* (Sykes, 2001). In this section, we document the QC-specific portion of the model.

2. USER PARAMETERS

There are two user parameters that are specific to the QC model. For a list of generic FSTAMP user parameters, see documentation for the database-independent portion of the FSP model (FSTAMP) in the *1996 MATH SIPP Programmer's Guide, Technical Description, and Codebook* (Sykes, 2001).

In 2001 the shelter cap changed midyear; hence, two sets of shelter cap values (SHELCAP1 and SHELCAP2) are entered for the 48 states, Guam, Virgin Islands, Hawaii, and Alaska.

In order to assist with defining pure PA households, a new parameter is added this year called TANFTYPE: a value of 1 indicates that both cash and noncash TANF should be used to define a pure PA household; similarly, with a value of 2 only cash TANF is used and with a value of 3 only noncash TANF is used to define a pure PA household.

3. PROGRAMMER'S GUIDE

a. Input files

MATHPC.PRM user parameter file (text file)

MATHPC.HDR ASCII header file that describes the record layout of the database file, MATHPC.BIN

MATHPC.BIN FSPQC database file in standard binary form, in a hierarchical format (household record then person records for persons in the household)

b. Output files

MATHPC.HDR ASCII header file that describes the record layout of the database file, MATHPC.BIN

MATHPC.BIN FSPQC database file in standard binary form, in a hierarchical format (household record then person records for persons in the household)

MATHPC.TAB summary tables

MATHPC.OUT debug file

c. Programs

i. Subroutines

db_fs_counts increments debug counters and prints totals to MATHPC.OUT file

db_fs_hh_definers creates variables that do not vary by FSU

db_fs_display_partic_debug dummy routine for comparability with SIPP version

db_fs_asset dummy routine for compatability with generic food stamp code

db_fs_unit identifies which household members belong to which food stamp unit and determines whether a person is categorically excluded from any FSU

db_fs_locate_vars locates the database-specific input variables

db_fs_parm_array_sizes sets the size of database-specific array sizes

db_fs_readparm reads database-specific user parameters from parameter file

db_fs_validate_parm validates the user parameters using database-specific criteria

db_fs_participation determines whether or not eligible units participate

db_fs_display_debug	prints database-specific debug print about the FSP units and their eligibility determination
db_fs_vars	creates FSU summary variables (e.g., FSGRINC, FSNET)

ii. Modules

fs_dbdefine	common storage for database-specific household definer variables
fs_dblocs	common storage for database-specific variable locations
fs_dbparm	common storage for model-specific variable locations

d. Output Variables

None. All output variables are created by the database-independent portion of the MATH FSTAMP model.

4. TECHNICAL DESCRIPTION

a. Overview

The primary purpose of the QC-specific model algorithms is to use QC-specific data elements to construct the variables needed by the database-independent portion of FSTAMP. The most important QC-specific model algorithms are those in the db_fs_vars subroutine (found in DBVARS.F90). The specifications for these algorithms are found in sections 6 and 7 below.

b. Validate User Parameters

i. Purpose

Although not QC-specific, some of the generic FSTAMP user parameters must have certain values for the QC model.

ii. Specification

The QC model does not support BASELAW = ' '. The baselaw simulation is determined by the QC file editing process, *not* by FSTAMP (although the QC file editing algorithms match FSTAMP algorithms exactly). For new baselaws, use BASELAW = FS_VARS in the NTH = 1 parameter set.

FS_VARS = 1 is not allowed, because the variables with a suffix of "1" are always on the file. The original, suffix "1" variables are always needed by the DBVARS routine for imputing medical, shelter, and child support payment expenses, and countable assets (when the unit composition is not that of the original unit). If you change the suffix "1" set of variables on the file, make sure you understand the impact on the DBLOCS, DBDEFINE, and DBVARS calculations.

c. Locate the Input Variables Used and the Output Variables Created

i. Purpose

During KEOF = 1, before processing household records, obtain pointers to variables needed as input to the database-specific model algorithms.

ii. Specification

Use the LOCVAR supervisor routine to obtain and store locations for the following variables:

STATE	AFDC	CONT	WRKREG	
LOCALCOD	GA	OTHUN	FSUN	1
RCNTACTN	OTHGOV	FSAFIL	FSUSIZE	1
FYWGT	SOCSEC	SEX	FSNKID	1
AGE	UNEMP	REL	FSNELDER	1
EMPRG	VET	DIS	FSNDIS	1
WAGES	WCOMP	FSMEDEXP	FSASSET	1
SLFEMP	EDLOAN	FSDEPDED	YRMONTH	
OTHERN	CSUPRT	FSSLTEXP	STRATUM	
SSI	DEEM	FSCSEXP	SSIIND	
DIVER				

d. Construct Household Definer Variables

i. Purpose

For each household, create household definer variables that are used in subsequent calculations.

ii. Specification

Set WGT to FYWGT.

Set U.S., Alaska, Hawaii, Guam & Virgin Islands geographic indicators. GEOG_DED indexes the standard deduction, childcare deduction, and shelter deduction arrays; GEOG_SCRN indexes the gross & net income screen arrays; GEOG_BEN indexes the maximum benefit array; and GEOG_POV indexes the POVMONTH array.

```
select case (state%ihhld)
  case(15)                                !! hawaii
    geog_ded = 3
    geog_scrn = 3
    geog_ben = 5
  case(2)                                  !! alaska
    geog_ded = 2
    geog_scrn = 2
    select case(localcod%ihhld)
      case(82)                             !! alaska rural i
        geog_ben = 3
      case(44,46,47,51)                   !! alaska rural ii
        geog_ben = 4
      case default
        geog_ben = 2                    !! alaska urban is default
    end select
  case(66)                                  !! guam
    geog_ded = 4
    geog_scrn = 1
    geog_ben = 6
  case(78)                                  !! virgin islands
    geog_ded = 5
    geog_scrn = 1
    geog_ben = 7
  case default
    geog_ded = 1
    geog_scrn = 1
    geog_ben = 1
end select

geog_pov = geog_scrn

region = region_lookup(state%ihhld)
```

Assign FSP reporting status.

FS_REPORTER - set to true for all households

Obtain *original* QC values for imputation of shelter expenses, medical expenses, child support expenses, and dependent care deductions (FSSLTEXP, FSMEDEXP, FSCSEXP, FSDEPDDED) in cases where the FSU is not the original FSU. Note that all of the calculations below *must* be based on the original FSU and its data, even if a new baselaw has been constructed. Also, set original assets, original unit counts, and total household AFDC (needed for the ALL_PA determination in DBVARS routine).

```
orig_fsmedexp = original_fsmedexp%ihhld
orig_fssltextp = original_fssltextp%ihhld
orig_fsdepded = original_fsdepded%ihhld
orig_fscsexp = original_fscsexp %ihhld

orig_fsuhead = 0
do ip = 1, ctprrh
  if (original_fsun%iper(ip) == ip) orig_fsuhead = ip
enddo
orig_fsusize = original_fsusize %iper(orig_fsuhead)
orig_fsunkid = original_fsunkid %iper(orig_fsuhead)
orig_fsnelder = original_fsnelder%iper(orig_fsuhead)
orig_fsndis = original_fsndis %iper(orig_fsuhead)
orig_fsasset = original_fsasset %iper(orig_fsuhead)
orig_kids_lt15 = 0
hhafdc = 0
do ip = 1, ctprrh
  if (afdc%iper(ip) > 0) hhafdc = hhafdc + afdc%iper(ip)
  if (original_fsun%iper(ip) == 0) cycle
  if (age%iper(ip) < 15 &
    .and. age%iper(ip) >= 0) orig_kids_lt15 = orig_kids_lt15 + 1
enddo
```

e. Construct Food Stamp Unit

i. Purpose

Use the “FSUN 1” code to construct the FSU. Make sure every FSU has a head.

ii. Specification

Assign FSUN (food stamp unit number) to each person in the household:

```
do ip = 1, ctprrh
  fsun(ip) = original_fsun%iper(ip)
```

```
enddo
```

Identify units that no longer have a head due to a reform - assign them a new head:

```
do ip = 1,ctprhh
  if (fsun(ip) == 0) cycle
  if (fsun(fsun(ip)) /= fsun(ip)) then
    do jp = ip+1,ctprhh
      if (fsun(jp) == fsun(ip)) fsun(jp) = ip
    enddo
    fsun(ip) = ip
  endif
enddo
```

f. Create FSU Summary Variables

i. Purpose

Characteristics of each food stamp unit must be summarized by adding the income of all members of the unit and counting various types of people in the unit (such as number of elderly and number of children).

ii. Specification

Identify students whose earnings are not counted:

```
do ip = 1, ctprhh
  student(ip) = .false.
  if ( age%iper(ip) <= studage(nth) &
    .and. age%iper(ip) >= 0 ) then

    if ( emprg%iper(ip) == 26 .or. &
      emprg%iper(ip) == 36 .or. &
      emprg%iper(ip) == 46 .or. &
      wrkreg%iper(ip) == 11 ) then
      student(ip) = .true.
    endif
  endif
end do ! end of person loop
```

For each unit, aggregate the income of people in the FSU:

```
do ip = 1, ctprhh
  !----- WELFARE Support (Note: missing income values are coded as < 0)
  if (afdc%iper(ip) > 0) fsafdc(iunit) = fsafdc(iunit) + afdc%iper(ip)
  if (ssi %iper(ip) > 0) fsssi (iunit) = fsssi (iunit) + ssi %iper(ip)
  if (ga %iper(ip) > 0) fsga (iunit) = fsga (iunit) + ga %iper(ip)

  !----- Earnings (Note: exclude student earnings from EARNINGS and GROSS income)
  if (.not. student(ip)) then
    if (wages %iper(ip) > 0) fsearn(iunit) = fsearn(iunit) + wages %iper(ip)
    if (othern%iper(ip) > 0) fsearn(iunit) = fsearn(iunit) + othern%iper(ip)
    if (slfemp%iper(ip) > 0) fsearn(iunit) = fsearn(iunit) + slfemp%iper(ip)
```

```

endif

!---- Other unearned income
if (othgov%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + othgov%iper(ip)
if (socsec%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + socsec%iper(ip)
if (unemp %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + unemp %iper(ip)
if (vet %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + vet %iper(ip)
if (wcomp %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + wcomp %iper(ip)
if (edloan%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + edloan%iper(ip)
if (csuprt%iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + csuprt%iper(ip)
if (deem %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + deem %iper(ip)
if (cont %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + cont %iper(ip)
if (othun %iper(ip) > 0) fsgrinc(iunit) = fsgrinc(iunit) + othun %iper(ip)

end do ! end of person loop

```

For each unit, loop over persons in the unit and count the number of unit members with various characteristics:

```

do iunit = 1, ctprrh
  do ip = 1, ctprrh
    fsusize(iunit) = fsusize(iunit) + 1

    if (age%iper(ip) > max_kid_age .or. age%iper(ip) < 0) then
      fsnadult(iunit) = fsnadult(iunit) + 1
    else
      fsnkid(iunit) = fsnkid(iunit) + 1
      if (age%iper(ip) >= min_school_age) fsnk5t17(iunit) = fsnk5t17(iunit) + 1
      if (age%iper(ip) < 15) kids_lt15 = kids_lt15 + 1
      if (age%iper(ip) < max_toddler_age) then
        fndepl2(iunit) = fndepl2(iunit) + 1
      else
        fndepge2(iunit) = fndepge2(iunit) + 1
      end if
    end if

    if ( age%iper(ip) >= min_elderly_age ) fsnelder(iunit) = fsnelder(iunit) + 1

    if (dis%iper(ip) == 1) fsndis(iunit) = fsndis(iunit) + 1
  end do ! end of person loop
end do ! end of loop over all fs units in the household

```

For each unit, loop over persons in the unit and count persons with public assistance for use in the “pure PA” imputation. Do not consider persons with FSAFIL=11 as on AFDC unless someone in the household (regardless of FSAFIL) has AFDC income.

```

do iunit = 1, ctprrh
  do ip = 1, ctprrh

    if (fsun(ip) /= iunit) cycle ! person not in the fsu
    !-----
    !-- (3) Counts for Pure PA imputation (Note: Pure PA status depends on PUREPA and TANFTYPE user
    parameters.
    !-----

```

```

! determine if received cash TANF and/or non-cash TANF
if (afdc%iper(ip) > 0 .or.      &
    (fsafil%iper(ip) == 11 .and. &
    (fsafdc(iunit) > 0 .or. fsga(iunit) > 0 ))) then
    cash_TANF(ip) = 1
else
    cash_TANF(ip) = 0
endif

if (fsafil%iper(ip) == 17) then
    noncash_TANF(ip) = 1
else
    noncash_TANF(ip) = 0
endif

! set TANF indicator depending on TANFTYPE parameter and type of TANF received
if (tanftype(nth) == 1 .and. cash_TANF(ip) == 1 .or. noncash_TANF(ip) == 1) then
    TANFind(ip) = 1
else if (TANFtype(nth) == 2 .and. cash_TANF(ip) == 1) then
    TANFind(ip) = 1
else if (TANFtype(nth) == 3 .and. noncash_TANF(ip) == 1) then
    TANFind(ip) = 1
else
    TANFind(ip) = 0
endif

! set GA indicator
if (ga%iper(ip) > 0 .or.      &
    (fsafil%iper(ip) == 14 .and. &
    (fsga(iunit) > 0 .or. (fsafdc(iunit) > 0 .and. eleven == 0)))) then
    GAind(ip) = 1
else
    GAind(ip) = 0
endif

if ( ( purepa(nth) == 1      & !AFDC, SSI, or GA
    .and. (TANFind(ip) == 1      &
    .or. SSInd%iper(ip) == 1      &
    .or. GAind(ip) == 1 ))      &
    .OR.( purepa(nth) == 2      & !AFDC ONLY
    .and. TANFind(ip) == 1 )    &
    .OR.( purepa(nth) == 3      & !SSI only
    .and. SSInd%iper(ip) == 1 ) &
    .OR.( purepa(nth) == 4      & !AFDC or SSI
    .and. (TANFind(ip) == 1      &
    .or. ssi%iper(ip) == 1 ))    &
    ) then

    pa_cnt = pa_cnt + 1
!----- Note that persons with unknown age are NOT considered adults here.
    if (age%iper(ip) > max_kid_age .and. age%iper(ip) < 99) then
        adultspa = adultspa + 1
    endif
endif
end do ! end of person loop for a given unit
end do ! end of loop over all fs units in the household

```

For each unit, add earnings and welfare income to FSGRINC:

```

do iunit = 1, ctprrh
    fsgrinc(iunit) = fsgrinc(iunit) + fsearn(iunit) + fsssi(iunit) &
        + fsafdc(iunit) + fsga(iunit)
end do ! end of loop over all fs units in the household

```

For each unit, impute “pure PA” status:

```

do iunit = 1, ctprrh
    ELEVEN = 0
    do ip = 1, ctprrh
        !FLAG UNITS WHERE AT LEAST ONE PERSON HAS FSAFILi = 11
        IF (FSAFIL%IPER(IP) == 11) ELEVEN = 1
    end do ! end of person loop for a given unit

    if (fsafdc(iunit) > 0 .or. (fsga(iunit) > 0 .and. eleven > 0)) then
        if (adults == adultspa) fsallpa(iunit) = 1
        else if (pa_cnt == fsusize(iunit)) then
            fsallpa(iunit) = 1
        endif
    end do ! end of loop over all fs units in the household

```

Identify FSUs headed by a single female. This is not used for any eligibility determination.

It is used for summary counts only (G/L table). Note that persons with unknown age are NOT considered adults here, nor are they considered children.

```

adults = 0
femadults = 0
do ip = 1, ctprrh
    if (fsun(ip) /= iunit) cycle ! person not in the fsu

    if (age%iper(ip) >= 18 ) then ! no one with missing AGE should be included here
        adults = adults + 1
        if (sex%iper(ip) == 2) femadults = femadults + 1
    endif
enddo
if (adults == 1 .and. femadults==1 .and. fsnkid(iunit) >0) fsngmom(iunit) = 1

```

g. Impute Assets, Shelter Expenses, Medical Expenses, and Child Support Payment Expenses When FSU Is Not the Original FSU

i. Purpose

Asset and expense data recorded on the FSPQC database pertain to the actual food stamp unit (FSU) sampled by the QC System. However, the QC Minimodel has the capability to

simulate FSUs with compositions that are different from the composition of the original FSU. A minimodel simulation can form FSUs consisting of any group of persons in a QC household. While the QC System collects income data for each household member, asset and expense data are recorded only for the original FSU as a whole. Thus, the minimodel uses the original FSU's asset and expense data, along with the algorithms described below, to impute the asset and expense data for any simulated FSU that has a composition different from that of the original FSU. The QC Minimodel does not use any of the algorithms described below when the composition of the simulated FSU is the same as the original FSU.

Many different imputation algorithms could be used to impute assets and expenses in simulations that involve changes to FSU composition. The best algorithm to use depends on the type of reform to be simulated. The algorithms described below have been incorporated into the minimodel because they have been used for numerous reform simulations requested by FNS. These algorithms will work well for many types of reforms, but they are not designed to be generally applicable.

ii. Specification

Countable assets. For all simulated FSUs, the minimodel assigns the countable assets of the original FSU:

$$FSASSET (IUNIT) = ORIG_FSASSET$$

This algorithm is intended simply to keep all FSUs asset-eligible in the reform simulation. By keeping all FSUs asset-eligible, the model simulates the effect of a unit composition change solely via the change in income and FSU size that accompany a change in unit composition. This results in a simulation that uses information that is available (income of each unit, and number of persons in each unit), while holding constant the effect of information that is unknown

(asset balances of each unit). In reality, changes in countable assets that result from changes in unit composition would cause some FSUs to lose eligibility. Minimodel results will not reflect eligibility losses that occur in this manner.

Shelter expenses. For all simulated FSUs, the minimodel assigns shelter expenses equal to the product of the number of persons in the unit and the per-capita shelter expenses of the original FSU:

$$\text{fssltextp}(iunit) = \text{nint}(\text{orig_fssltextp} * \text{float}(\text{fsusize}(iunit)) / \text{orig_fsusize})$$

In reality, a household's shelter expenses are assigned to each FSU in the household, based on the share of shelter expenses actually *paid* by each member of each FSU. Although the QC data contain no information regarding which persons are responsible for paying shelter expenses, one could impute payment responsibility based on income; a person with 65 percent of a household's income would be assumed to be responsible for paying 65 percent of the household's shelter expenses. Again, the best imputation depends on the type of reform to be simulated.

Medical expenses. The minimodel imputes medical expenses based either on the number of elderly persons in the original unit, or, if no elderly are present, on the number of disabled persons. If the original unit contains no elderly persons and no disabled persons, then a medical deduction is not allowed, neither in the original QC file editing process, nor in any minimodel simulations.

```
if (orig_fsmedexp > 0 ) then
  if (orig_fsnelder > 0) then
    fsmedexp(iunit) = nint( orig_fsmedexp * fsnelder(iunit) / float( orig_fsnelder))
  else if (orig_fsndis > 0) then
    fsmedexp(iunit) = nint( orig_fsmedexp * fsndis(iunit) / float( orig_fsndis ) )
  else
    fsmedexp(iunit) = 0
  endif
endif
```

When both an elderly person and a non-elderly disabled person are present, note that the algorithm uses only the number of elderly persons, rather than both the number of elderly and the number of disabled persons. The implicit assumption is that, in any given household, it is likely that medical expenses are being generated by a single person, rather than multiple persons. If the medical expense are likely to be generated by a single person, the elderly person is more likely than the non-elderly disabled person to be generating the expenses.

The medical expense imputation algorithm works best when persons are being removed from the original FSU, and when the original FSU is being split into two or more units. When persons not currently participating in the FSP (i.e. persons with FSAFIL 30-39) are being brought into the original FSU, the algorithm produces somewhat artificial results. In these latter cases, in reality, some FSUs without any medical expenses would bring in elderly persons who have medical expenses. Conversely, some FSUs with medical expenses would bring in elderly persons who do not have medical expenses. However, the minimodel algorithm only adds new medical expenses to a unit when medical expenses already exist within the original unit. Conversely, the minimodel algorithm never adds any new medical expenses to any units that did not already exist within the original unit.

Child support payment expenses. The QC Minimodel imputes the child support payment expenses of the original unit to the head of the original unit. The child support deduction is equal to the child support expenses.

```
IF (ORIG_FSCSEXP > 0 .AND. &  
    FSUN(ORIG_FSUHEAD) == IUNIT) FSCSPDED(IUNIT) = ORIG_FSCSEXP
```

For any reform plan, the child support expenses are assigned to whichever simulated FSP unit contains the head of the original unit. If the head of the original unit does not belong to any of the reform units, then the child support expenses are not used.

h. Select Participants

i. Purpose

After eligibility is determined for an FSU in the household, the model must simulate whether or not the FSU decides to participate. In the QC Minimodel, all eligible units are selected to participate. Because every household on the file did in reality participate in the FSP, the all-eligible-units-participate model is reasonable in most cases. If a large reduction in FSP benefits is simulated, the user may want to model some eligible households to decide *not* to participate.

ii. Specification

```
do iunit = 1, ctprrh
  fspart(iunit) = 0
  if (fsun (iunit) /= iunit) cycle      ! not the fsu head
  if (fsben(iunit) > 0) fspart(iunit) = 1 ! all eligible units participate
end do
```

V. CODEBOOK FOR THE FY 2001 FSPQC DATABASE

In this chapter, we describe the variables on the FY 2001 FSPQC database, including an overview of the types of variables on the file and a list and detailed description of each variable.

A. OVERVIEW OF VARIABLES ON THE QUALITY CONTROL FILE

For each variable in the FY 2001 FSPQC database, the Codebook provides the name, origin, label, range of values, and a list of values or description. This section explains how to interpret and use that information.

1. Origin: Reported versus Constructed

The "Origin" column in the codebook indicates the source of each particular variable as either reported or constructed. Variables coded "R" are those reported on the Quality Control Review Schedule input form and have been read directly from the raw datafile, although some editing may have taken place as noted in the variable description. Variables coded "C" are constructed or recoded variables that are derived from reported variables and program parameters (such as the Thrifty Food Plan and the FSP benefit reduction rate). Constructed variables are the best variables for analytical purposes because inconsistencies have been corrected.

The following constructed variables are used in creating the tables in the *Characteristics of Food Stamp Households* report series and should be used to obtain consistent results:

FSBEN	Unit food stamp benefit amount
FSUSIZE	Unit size
FSGRINC	Unit total income
FSNETINC	Unit net income
FSERNDDED	Unit earnings deduction
TPOV	Unit poverty percentage

2. Missing Values

Table III.1 lists the missing value conventions used in the FSPQC database.

TABLE III.1
CODES FOR MISSING DATA

ASCII or Binary Data	SAS Data	Description
Numeric	Numeric	
-1	.	Blank on source file
-2	.A	Value out of range
-3	.B	Coded by QC reviewer as unknown (field coded with all 9s)
-4	.C	Pertains to constructed variables only; variable could not be constructed or calculated due to missing data
-5	.D	For CERTMTH variable, indicates that household is participating in months not certified

3. Using the FSPQC Database

The FY 2001 FSPQC database is a SAS file with 47,009 observations from 12 sample months—October 2000 to September 2001 for all states, the District of Columbia, Guam, and the Virgin Islands. The user has the flexibility to choose all 12 months, one month, or a set of months to conduct analyses. To conduct analyses for a specific calendar month, the user should select observations sampled in that month by using the year month (YRMONTH) variable. The year month variable is a six-digit code with the first four digits indicating the year and the last two digits indicating the month. For example, to conduct an analysis based on observations from January 2001, the user should select all observations with a YRMONTH code equal to "200101". If a subset of observations is not specified, all months will be included in the analysis.

After selecting the desired observations, the user must assign a weight to each observation so that the sample represents the national food stamp caseload. The weights, stored in the

variable HWGT, are computed for each of the 12 independent monthly samples and are based on actual program participation. (For a more detailed description of the sampling weights, see *Technical Description and Programmer's Guide for the Fiscal Year 2001 FSPQC Database and QC Minimodel*.) When analyzing one specific calendar month, the user should use the YRMONTH code to select the correct observations and then use the HWGT variable. However, if the analysis is based on more than one month, and an average monthly estimate is desired, the user should divide HWGT by the number of months being analyzed. The FYWGT variable should be used for all full-year tabulations ($FYWGT=HWGT/12$).

The tables in the *Characteristics of Food Stamp Households* report series are based on the full-year sample. To create the tables, we select all observations for all months and weight the observations by FYWGT to reflect the national monthly average caseload during the fiscal year.

The FSPQC database can be used to obtain person-level information along with unit-level data. An integer from 1 to 15, representing up to 15 people in a household, is attached to each person-level variable. For ease, users often place these variables in arrays and use indices to access the data. One of the key person-level variables is the affiliation code FSAFILi. An FSAFILi value between 10 and 20 indicates that the person participated in the FSP.

B. CODEBOOK

This codebook lists and describes each variable in the FY 2001 FSP QC database. The unit-level variables are listed first, followed by the person-level variables. The unit-level variables are divided into the following 6 categories:

- (1) Unit quality control review administrative data
- (2) Unit demographics and sample weights
- (3) Unit income

- (4) Unit assets
- (5) Unit expenses and deductions
- (6) Unit benefits

The person-level variables are divided into 2 categories:

- (7) Person-level characteristics
- (8) Person-level income

The categories appear in the order shown above. The variables in each category are listed alphabetically. Two codebooks are presented, both sorted in the exact same order. The first codebook--the quick-reference codebook--lists only the variable name, its origin, and a brief description. The second codebook--the detailed codebook--lists the variable name, its origin, and a detailed description that includes all the valid values of the variable.

VARIABLE ORIGIN DESCRIPTION

Unit QC Review Administrative Data

ACTNTYPE	R	Type of action
ALLADJ	R	Allotment adjustment
*AMTADJ	R	Amount of allotment adjustment
AUTHREP	R	Authorized representative
CASE	R	Case classification
CERTMTH	R	Months in certification period
EXPEDSER	R	Received expedited service
HHLDNO	C	Household identification number
LASTCERT	C	Months since last certification for food stamps
LOCALCOD	R	Local agency code
PRIOR	R	Received prior assistance
RCNTACTN	R	Most recent action on case
RCNTOPEN	R	Most recent opening/application
REVNUM	R	State QC review number
SPANMM	C	Number of months since most recent opening/application
STATUS	R	Status of case error findings
YRMONTH	R	Sample year and month

Unit Demographics and Sample Weights

CERTHHSZ	R	Certified unit size
CTPRHH	C	Number of people in household
FSALLPA	C	Pure public assistance unit
FSNDIS	C	Number of disabled people in unit
FSNELDER	C	Number of elderly (age 60 or older) in unit
FSNGMOM	C	Single-female headed unit
FSNK0T4	C	Number of preschool-age children (under age 5) in unit
FSNK5T17	C	Number of school-age children (age 5 to 17) in unit
FSNKID	C	Number of children (under age 18) in unit
FSNONCIT	C	Number of non-citizens in unit
FSUSIZE	C	Constructed certified unit size
FYWGT	C	Weight used for full-year calculations
HWGT	C	Monthly sample weight
RAWHSIZE	R	Reported number of people in household
REGION	C	Constructed census region code
REGIONCD	R	FNS region code
STATE	R	FIPS code for state or territory
COUNTYCD	C	FIPS code for county
STRATUM	R	Stratum identification
TPOV	C	Gross income/poverty level ratio
URBRUR	C	Urban/rural indicator

Unit Income (Monthly Dollar Amounts)

FSCONT	C	Unit income from contributions
FSCSUPRT	C	Unit income from child support payments
FSDEEM	C	Unit deemed income
FSEARN	C	Unit earned income
FSEDLOAN	C	Unit income from educational grants and loans
FSGA	C	Unit general assistance benefits
FSGRINC	C	Final unit gross income
FSNETINC	C	Final unit net income
FSOTHERN	C	Unit other earned income
FSOTHGOV	C	Unit other government benefits
FSOTHUN	C	Unit other unearned income
FSSLFEMP	C	Unit self employment income
FSSOCSEC	C	Unit social security income
FSSSI	C	Unit SSI benefits
FSTANF	C	Unit TANF payments
FSUNEARN	C	Unit unearned income
FSUNEMP	C	Unit unemployment compensation benefits
FSVET	C	Unit veterans' benefits
FSWAGES	C	Unit wages and salaries
FSWCOMP	C	Unit workers' compensation benefits
RAWGROSS	R	Reported unit gross income
RAWNET	R	Reported unit net income

Unit Assets

*EQUITY_A	R	Reported equity value of vehicle one
*EQUITY_B	R	Reported equity value of vehicle two
FSASSET	C	Total countable assets
FSVEHAST	R	Non-excluded vehicles value
LIQRESOR	R	Reported liquid assets
OTHNLRES	R	Reported other nonliquid assets
REALPROP	R	Reported real property
*VALUE_A	R	Reported fair market value of vehicle one
*VALUE_B	R	Reported fair market value of vehicle two
*VEHICLEA	R	Code information for vehicle one
*VEHICLEB	R	Code information for vehicle two

Unit Expenses and Deductions

AUC	R	Actual utility costs
FSCSEXP	R	Reported child support expense deduction
FSDEPDED	R	Reported dependent care deduction
FSDEPDE2	C	Marginal effectiveness of dependent care deduction
FSERNDED	C	Calculated earned income deduction
FSERNDE2	C	Marginal effectiveness of earned income deduction

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Quick-Reference Codebook</i>
FSMEDDED	C	Calculated medical deduction	
FSMEDDE2	C	Marginal effectiveness of medical deduction	
FSMEDEXP	R	Reported medical expenses	
FSSLTDED	C	Calculated excess shelter deduction	
FSSLTDE2	C	Marginal effectiveness of excess shelter deduction	
FSSLTEXP	R	Reported shelter expenses	
FSSTDDDED	C	Standard deduction	
FSSTDDDE2	C	Marginal effectiveness of standard deduction	
FSTOTDED	C	Total deductions	
FSTOTDE2	C	Marginal effectiveness of total deduction	
*HOMEDDED	R	Reported homeless shelter allowance	
RAWERNDD	R	Reported earned income deduction	
RENT	R	Rent/mortgage amount	
SHELDCAP	C	Maximum allowable shelter expense deduction	
SHELDED	R	Reported shelter deduction	
*SUA	R	Standard utility allowance	
SUAAMT	R	Standard utility allowance amount	

Unit Benefits

AMTERR	R	Amount of coupon allotment in error
BENMAX	C	Maximum benefit amount
FSBEN	C	Final calculated benefit
FSMINBEN	C	Received minimum benefit
NETSCRN	C	Net income screen
RAWBEN	R	Reported food stamp benefit received

Person-Level Characteristics: i = 1 to 15

*ABWDSTi	R	ABAWD status
AGEi	R	Age
*CTZNi	R	Citizenship status
DISi	C	Disabled indicator
DPCOSTi	R	Reported dependent care cost
EMPRGi	R	Employment and training program status
EMPSTi	R	Employment status
FSAFILi	R	Food stamp case affiliation
FSUNi	C	Position of head of food stamp unit
RACETHi	R	Race/ethnicity
RELi	R	Relationship to head of household
SEXi	R	Sex
SSIINDi	C	Supplemental Security Income indicator
WRKFARi	R	Workfare status
WRKREGi	R	Work registration status
YRSEDi	R	Years of education

Person-Level Income (Monthly Dollar Amounts): i = 1 to 15

CONTi	R	Income from contributions
CSUPRTi	R	Income from child support payments
DEEMi	R	Deemed income
*DIVERi	R	State diversion payments
EDLOANi	R	Income from educational grants and loans
*ENERGYi	R	Energy Assistance Income
GAi	R	General assistance benefits
OTHERNi	R	Other earned income
OTHGOVi	R	Other government benefits
OTHUNi	R	Other unearned income
SLFEMPi	R	Self employment income
SOCSECI	R	Social security income
SSIi	R	Supplemental Security Income (SSI) benefits
TANFi	R	Temporary Assistance to Needy Families (TANF) benefits
UNEMPi	R	Unemployment compensation benefits
VETi	R	Veterans' benefits
WAGESi	R	Wages and salaries
WCOMPi	R	Workers' compensation benefits

*These variables contain significant inconsistencies. See Appendix A for a description of the errors and user cautions.

VARIABLE ORIGIN DESCRIPTION

*Detailed Codebook
QC Review*

Unit QC Review Administrative Data

ACTNTYPE	R	<p>TYPE OF ACTION Range = (1, 5) 1=Certification 3=Recertification 5=Interim change</p>
ALLADJ	R	<p>ALLOTMENT ADJUSTMENT Range = (1, 9) 1=No adjustment 2=Prorated benefit 3=Deduction for claims recoupment 4=Deduction for replacing lost EBT cards 5=Combined monthly allotments 6=Multiple allotments for departing residents of treatment centers 7=Deduction for a sanction 8=Deduction for failure to comply with another means tested program (up to 25%) 9=No increase due to failure to comply with another means tested program</p>
AMTADJ	R	<p>AMOUNT OF ALLOTMENT ADJUSTMENT Range = (0,10228) We recommend AMTADJ be used with caution. See Appendix A for more details.</p>
AUTHREP	R	<p>AUTHORIZED REPRESENTATIVE Range = (1, 2) 1=Used to make application 2=Not used to make application</p>
CASE	R	<p>CASE CLASSIFICATION Range = (1, 5) 1=Case was processed by an EW in a State or county certification office or by an EW outstationed in a Social Security Administration (SSA) office. 2=Case was processed by a SSA worker. 3=Case is part of an authorized demonstration project that has been identified by FNS as having significantly different certification rules. 4=Case is part of an authorized demonstration that is not significantly different. 5=Case is part of a Simplified Food Stamp Program that is not significantly different.</p>

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook QC Review</i>
CERTMTH	R	MONTHS IN CERTIFICATION PERIOD Range = (1, 94) Number of months case was certified to participate during the initial certification or recertification.	
EXPEDSER	R	RECEIVED EXPEDITED SERVICE Range = (1, 5) 1=Household received expedited service within the required time frame. 2=Household was entitled to, but did not receive expedited service within the required time frame 3=Household was entitled to, but did not receive expedited service. 4=Household received but was not entitled to expedited service. 5=Household not entitled to expedited service.	
HHLDNA	C	HOUSEHOLD IDENTIFICATION NUMBER Range = (1, 54720) For purposes of file editing and review, this is a unique unit identifier; HHLDNA is the record position of the unit in the unedited FSPQC file.	
LASTCERT	C	MONTHS SINCE LAST CERTIFICATION FOR FOOD STAMPS Range = (0, 99)	
LOCALCOD	R	LOCAL AGENCY CODE Range = (0, 953) Groups data by county or county equivalent. May be FIPS code or an alternative classification.	
PRIOR	R	RECEIVED PRIOR ASSISTANCE Range = (1, 2) Received assistance prior to the most recent opening. 1=Yes 2=No	
RCNTACTN	R	MOST RECENT ACTION ON CASE Range = (19870427, 20010929) Date the case was certified or recertified for participation in the sample month under review. In the form yyymmdd.	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook QC Review</i>
RCNTOPEN	R	MOST RECENT OPENING/APPLICATION Range = (19700122, 20010927) Date of initial certification for current uninterrupted period of participation. In the form yyyymmdd.	
REVNUM	R	STATE QC REVIEW NUMBER Range = (1, 821202)	
SPANMM	C	NUMBER OF MONTHS SINCE MOST RECENT OPENING/APPLICATION (Range = 0, 380)	
STATUS	R	STATUS OF CASE ERROR FINDINGS Range = (1, 4) 1=Amount correct 2=Overissuance 3=Underissuance 4=Ineligible	
YRMONTH	R	SAMPLE YEAR AND MONTH Range = (200010, 200109) The YRMONTH variable allows the user to select one or more sample months from the full-year file for analyses. The YRMONTH variable is a six digit code; the first four digits indicate the sample year and the last two indicate the month. To select observations from the month of January 2001, for example, YRMONTH should equal "200101".	

VARIABLE **ORIGIN** **DESCRIPTION**

*Detailed Codebook
Unit Demographics/Weights*

Unit Demographics and Sample Weights

CERTHHSZ	R	CERTIFIED UNIT SIZE Range = (1, 64)
CTPRHH	C	NUMBER OF PEOPLE IN HOUSEHOLD Range = (1, 15) Number of people in the household with non-missing person-level information.
FSALLPA	C	PURE PUBLIC ASSISTANCE UNIT Range = (0, 1) 1=Yes 0=No Recipients of public assistance (PA) are those with: TANFi>0 or GAi>0; FSAFILi =11 and (FSTANF>0 or FSGA>0); FSAFILi =14 and FSGA>0; FSAFILi =14, FSTANF>0, and no one in unit has FSAFILi =11; SSIINDi = 1; or FSAFILi = 17. Pure PA Units are those where: FSTANF>0 and all adults receive PA; FSGA>0, FSAFILi=11 for some members, and all adults receive PA; or all members receive PA.
FSNDIS	C	NUMBER OF DISABLED PEOPLE IN UNIT Range = (0, 5) Number of people in the food stamp unit with DISi=1
FSNELDER	C	NUMBER OF ELDERLY IN UNIT Range = (0, 3) Number of people age 60 or older in the food stamp unit
FSNGMOM	C	SINGLE-FEMALE HEADED UNIT Range = (0, 1) Defined as one adult and one or more children, and the adult is female 1= Yes 0 = No

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Demographics/Weights</i>
FSNK0T4	C	NUMBER OF PRESCHOOL-AGE CHILDREN IN UNIT Range = (0, 5) Number of children under age five in the food stamp unit	
FSNK5T17	C	NUMBER OF SCHOOL-AGE CHILDREN IN UNIT Range = (0, 12) Number of children age 5 to 17 in the food stamp unit	
FSNKID	C	NUMBER OF CHILDREN IN UNIT Range = (0, 12) Number of children under age 18 in the food stamp unit	
FSNONCIT	C	NUMBER OF NON-CITIZENS IN UNIT Range = (0, 11) Number of people with 10<FSAFILi<20 and CTZNi>3.	
FSUSIZE	C	CONSTRUCTED CERTIFIED UNIT SIZE Range = (1, 15) Number of people in the dwelling with 10<FSAFILi<20	
FYWGT	C	WEIGHT USED FOR FULL-YEAR CALCULATIONS Range = (14.11, 1246.60). Calculated as HWGT/12.	
HWGT	C	MONTHLY SAMPLE WEIGHT Range = (169.32, 14959.14) This field contains sample weights that allow the user to replicate total monthly caseloads as reflected in Food Stamp Program Operations data. If the reference period of analysis is longer than one calendar month, in order to get an average monthly value for that reference period, the weight field must be divided by the number of months being analyzed.	
RAWHSIZE	R	REPORTED NUMBER OF PEOPLE IN HOUSEHOLD Range = (1, 16)	
REGION	C	CONSTRUCTED CENSUS REGION CODE Range = (1, 4) 1=Northeast 2=Midwest 3=South 4=West	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>
REGIONCD	R	FNS REGION CODE Range = (1, 7) 1=Northeast 2=Mid-Atlantic 3=Southeast 4=Midwest 5=Southwest 6=Mountain Plains 7=Western See Appendix C for States by region.
STATE	R	FIPS CODE FOR STATE OR TERRITORY Range = (1, 78) See Appendix C for FIPS code list.
COUNTYCD	C	FIPS CODE FOR COUNTY Range = (1, 840)
STRATUM	R	STRATUM IDENTIFICATION Range = (0, 50) Codes for distinct parts of States with stratified samples. Blank stratum codes have been recoded to zero and STRATUM codes for Texas have been recoded from character to numeric values.
TPOV	C	GROSS INCOME/POVERTY LEVEL RATIO Range = (0, 445) $TPOV = FSGRINC / NETSCRN * 100$, rounded to the nearest integer. If FSGRINC=0 then TPOV=0. Otherwise, if TPOV rounds to zero, TPOV is set equal to one.
URBRUR	C	URBAN/RURAL INDICATOR Range = (0, 3) 0=Rural 1=Urban 3=Unknown

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Income</i>
Unit Income (Monthly Dollar Amounts)			
FSCONT	C	UNIT INCOME FROM CONTRIBUTIONS Range = (0, 1642) Sum of CONT1 through CONT15	
FSCSUPRT	C	UNIT INCOME FROM CHILD SUPPORT PAYMENTS Range = (0, 1749) Sum of CSUPRT1 through CSUPRT15	
FSDEEM	C	UNIT DEEMED INCOME Range = (0, 1028) Sum of DEEM1 through DEEM15	
FSEARN	C	UNIT EARNED INCOME Range = (0, 3575) Sum of FSWAGES, FSSLFEMP, and FSOTHERN	
FSEDLOAN	C	UNIT INCOME FROM EDUCATIONAL GRANTS AND LOANS Range = (0, 1040) Sum of EDLOAN1 through EDLOAN15	
FSGA	C	UNIT GENERAL ASSISTANCE BENEFITS Range = (0, 2205) Sum of GA1 through GA15	
FSGRINC	C	FINAL UNIT GROSS INCOME Range = (0, 4819) Total monthly gross income of unit in dollars.	
FSNETINC	C	FINAL UNIT NET INCOME Range = (0, 3985) Total monthly income of unit in dollars, after applying deductions. Calculated as FSGRINC-FSTOTDED but not less than 0.	
FSOTHERN	C	UNIT OTHER EARNED INCOME Range = (0, 2760) Sum of OTHERN1 through OTHERN15	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Income</i>
FSOTHGOV	C	UNIT OTHER GOVERNMENT BENEFITS Range = (0, 1740) Sum of OTHGOV1 through OTHGOV15	
FSOTHUN	C	UNIT OTHER UNEARNED INCOME Range = (0, 2185) Sum of OTHUN1 through OTHUN15	
FSSLFEMP	C	UNIT SELF EMPLOYMENT INCOME Range = (0, 3575) Sum of SLFEMP1 through SLFEMP15	
FSSOCSEC	C	UNIT SOCIAL SECURITY INCOME Range = (0, 2478) Sum of SOCSEC1 through SOCSEC15	
FSSSI	C	UNIT SSI BENEFITS Range = (0,2503) Sum of SSI1 through SSI15	
FSTANF	C	UNIT TANF PAYMENTS Range = (0, 2053) Sum of TANF1 through TANF15	
FSUNEARN	C	UNIT UNEARNED INCOME Range = (0, 3174) Sum of FSCONT, FSCSUPRT, FSDEEM, FSEDLOAN, FSGA, FSOTHGOV, FSOTHUN, FSSOCSC, FSSSI, FSTANF, FSUNEMP, FSVET and FSWCOMP.	
FSUNEMP	C	UNIT UNEMPLOYMENT COMPENSATION BENEFITS Range = (0, 2055) Sum of UNEMP1 through UNEMP15	
FSVET	C	UNIT VETERANS' BENEFITS Range = (0, 1491) Sum of VET1 through VET15	
FSWAGES	C	UNIT WAGES AND SALARIES Range = (0, 3320) Sum of WAGES1 through WAGES15	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Income</i>
FSWCOMP	C	UNIT WORKERS' COMPENSATION BENEFITS Range = (0, 2038) Sum of WCOMP1 through WCOMP15	
RAWGROSS	R	REPORTED UNIT GROSS INCOME Range = (0, 99998) Reported total monthly income of unit in dollars, before applying deductions. (See FSGRINC for the final value.)	
RAWNET	R	REPORTED UNIT NET INCOME Range = (0, 4058) Reported total monthly income of unit in dollars. (See FSNETINC for the final value.)	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Assets</i>
Unit Assets			
EQUITY_A	R	REPORTED EQUITY VALUE OF VEHICLE ONE Range = (0, 91000) We recommend against using EQUITY_A. See Appendix A for more details.	
EQUITY_B	R	REPORTED EQUITY VALUE OF VEHICLE TWO Range = (0, 80503) We recommend against using EQUITY_B. See Appendix A for more details.	
FSASSET	C	TOTAL COUNTABLE ASSETS Range = (0, 8968) Sum of LIQRESOR, FSVEHAST, OTHNLRES and REALPROP. If any of these variables contains a missing value, FSASSET will also have a missing value.	
FSVEHAST	R	NON-EXCLUDED VEHICLES VALUE Range = (0, 4775)	
LIQRESOR	R	REPORTED LIQUID ASSETS Range = (0, 6229)	
OTHNLRES	R	REPORTED OTHER NONLIQUID ASSETS Range = (0, 5319)	
REALPROP	R	REPORTED REAL PROPERTY Range = (0, 6300) Does not include home.	
VALUE_A	R	REPORTED FAIR MARKET VALUE OF VEHICLE ONE Range = (0, 58800) We recommend against using VALUE _A. See Appendix A for more details.	
VALUE_B	R	REPORTED FAIR MARKET VALUE OF VEHICLE TWO Range = (0, 47754) We recommend against using VALUE _B. See Appendix A for more details.	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Assets</i>
VEHICLEA	R	<p>CODE INFORMATION FOR VEHICLE ONE</p> <p>Range = (1, 9)</p> <p>We recommend against using VEHICLEA. See Appendix A for more details.</p> <p>1=Vehicle is used for income producing activities, as a residence, to transport a disabled household member, or to transport fuel and/or water.</p> <p>2=Inaccessible resource, if applicable. (Vehicle's equity value is less than or equal to one-half of applicable resource limit.)</p> <p>3=Vehicle is excluded due to categorical eligibility.</p> <p>4=Vehicle is registered and used for commuting to a place of employment, school or job training exercise</p> <p>5=Vehicle is registered and used as the household's first (primary) vehicle.</p> <p>6=Vehicle is not registered.</p> <p>7=Vehicle is not excluded.</p> <p>9=Other. <u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Expenses and Deductions</i>
-----------------	---------------	--------------------	---

Units Expenses and Deductions

AUC	R	ACTUAL UTILITY COSTS Range = (0, 6347) We recommend AUC be used with caution. See Appendix A for more details.	
FSCSEXP	R	REPORTED CHILD SUPPORT EXPENSE DEDUCTION Range = (0, 5019)	
FSDEPDED	R	REPORTED DEPENDENT CARE DEDUCTION Range = (0, 964)	
FSDEPDE2	C	MARGINAL EFFECTIVENESS OF DEPENDENT CARE DEDUCTION Range = (0, 964) Calculated as $FSDEPDE2 = \text{NEWNET} - \text{FSNETINC}$ where $\text{NEWNET} = \text{MAX}(0, \text{FSGRINC} - \text{FSSLT3} - \text{FSERNDDED} - \text{FSMEDDED} - \text{FSSTDDED} - \text{FSCSEXP})$. FSSLT3 is the shelter deduction calculated without FSDEPDED.	
FSERNDDED	C	CALCULATED EARNED INCOME DEDUCTION Range = (0, 715) The deduction equals 20% of total earned income. Calculated as $\text{FSERNDDED} = .20 * \text{FSEARN}$, rounded to nearest integer.	
FSERNDE2	C	MARGINAL EFFECTIVENESS OF EARNED INCOME DEDUCTION Range = (0, 825) Calculated as $\text{FSERNDE2} = \text{NEWNET} - \text{FSNETINC}$ where $\text{NEWNET} = \text{MAX}(0, \text{FSGRINC} - \text{FSSLT2} - \text{FSDEPDED} - \text{FSMEDDED} - \text{FSSTDDED} - \text{FSCSEXP})$. FSSLT2 is the shelter deduction calculated without FSERNDDED.	
FSMEDDED	C	CALCULATED MEDICAL DEDUCTION Range = (0, 3618) The deduction is for units with elderly or disabled members only and equals medical expenses over \$35. Calculated as $\text{FSMEDDED} = \text{MAX}(0, \text{FSMEDEXP} - 35)$	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Expenses and Deductions</i>
FSMEDDE2	C	MARGINAL EFFECTIVENESS OF MEDICAL CARE DEDUCTION Range = (0, 1572) Calculated as $FSMEDDE2 = NEWNET - FSNETINC$ where $NEWNET = \text{MAX}(0, FSGRINC - FSSLT4 - FSDEPDED - FSERNDED - FSSTDDED - FSCSEXP)$. FSSLT4 is the shelter deduction calculated without FSMEDDED.	
FSMEDEXP	R	REPORTED MEDICAL EXPENSES Range = (0, 9000)	
FSSLTDED	C	CALCULATED EXCESS SHELTER DEDUCTION Range = (0, 4795) Set equal to XCOST for units with elderly or disabled, and equal to the minimum of XCOST and SHELCAP for units without elderly or disabled where $XCOST = \text{MAX}(0, FSSLTEXP - HALFNET)$, and $HALFNET = \text{MAX}(0, \text{ROUND}(GROSSINC - FSSTDDED - ERNINCDD - FSDEPDED - FSMEDDED - FSCSEXP/2))$. The final value of FSSLTDED is rounded to the nearest integer.	
FSSLTDE2	C	MARGINAL EFFECTIVENESS OF EXCESS SHELTER DEDUCTION Range = (0, 965) Calculated as $FSSLTDE2 = NEWNET - FSNETINC$ where $NEWNET = \text{MAX}(0, FSGRINC - FSDEPDED - FSERNDED - FSMEDDED - FSSTDDED - FSCSEXP)$	
FSSLTEXP	R	REPORTED SHELTER EXPENSES Range = (0, 6627)	
FSSTDDED	C	STANDARD DEDUCTION Range = (118, 269) The standard deduction varies by region. See Appendix B for schedule.	
FSSTDDE2	C	MARGINAL EFFECTIVENESS OF STANDARD DEDUCTION Range = (0, 404) Calculated as $FSSTDDE2 = NEWNET - FSNETINC$ where $NEWNET = \text{MAX}(0, FSGRINC - FSSLT1 - FSDEPDED - FSERNDED - FSMEDDED - FSCSEXP)$. FSSLT1 is the shelter deduction calculated without FSSTDDED.	

<u>VARIABLE</u>	<u>ORIGIN</u>	<u>DESCRIPTION</u>	<i>Detailed Codebook Unit Expenses and Deductions</i>
FSTOTDED	C	TOTAL DEDUCTIONS Range = (118, 5377) Sum of FSSTDDDED, FSERNDDED, FSDEPDDED, FSSLTDED, FSMEDDED, and FSCSEXP.	
FSTOTDE2	C	MARGINAL EFFECTIVENESS OF TOTAL DEDUCTION Range = (0, 2039) Calculated as FSGRINC-FSNETINC	
HOMEDED	R	REPORTED HOMELESS SHELTER ALLOWANCE Range = (0, 850) We recommend against using HOMEDED. See Appendix A for more details.	
RAWERND	R	REPORTED EARNED INCOME DEDUCTION Range = (0, 993) (See FSERNDDED for final earned income deduction value)	
RENT	R	RENT/MORTGAGE AMOUNT Range = (0, 50013) We recommend RENT be used with caution. See Appendix A for more details.	
SHELAP	C	MAXIMUM ALLOWABLE SHELTER EXPENSE DEDUCTION Range = (221, 543) See Appendix B for values.	
SHEDED	R	REPORTED SHELTER DEDUCTION Range = (0, 50030) (See FSSLTDED for the final value.)	
SUA	R	STANDARD UTILITY ALLOWANCE Range = (1,8) We recommend against using SUA. See Appendix A for more details. 1=Not entitled to SUA 2=Includes heating and cooling and all else 3=Based on the receipt of LIHEAA 4=Includes heating and cooling and all else except telephone 5=Includes utilities except heating and cooling 6=Includes utilities except heating 7=One that includes individual standards for each (e.g., heating, cooling, sewerage, garbage, trash collection, etc.) 8=Household received partial/prorated SUA

VARIABLE**ORIGIN****DESCRIPTION***Detailed Codebook
Person-Level Characteristics*

- 08=Eligible asylee (including LPR eligible based on asylee status)
- 09=Eligible Cuban or Haitian (including LPR eligible based on Cuban or Haitian status)
- 10=Eligible with deportation withheld (including LPR eligible based on prior deportation withheld status)
- 11=Amerasian
- 12=Eligible because of battered provision
- 13=Qualified non-citizen in U.S. on 8/22/96 and under 18
- 14=Qualified non-citizen in U.S. and 65 or older on 8/22/96
- 15=Qualified non-citizen in U.S. on 8/22/96 and disabled

Ineligible

- 31=Ineligible legal permanent resident
- 32=Ineligible refugee
- 33=Ineligible asylee
- 34=Ineligible Cuban or Haitian
- 35=Ineligible Amerasian
- 36=Ineligible with deportation withheld
- 37=Ineligible battered non-citizen
- 38=Other ineligible legal non-citizen (e.g. tourist, student, diplomat)
- 39=Undocumented
- 40=Non-citizen but status unknown
- 99=Unknown

According to the quality control coding instructions, all individuals with citizenship codes 1 through 15 should be eligible for food stamps, while all individuals with citizenship codes over 15 should be ineligible.

Nevertheless, some individuals with CTZNI codes of 5, 7, 11, 12, and 13 have an FSAFILI code indicating they are ineligible. These individuals have a '9' appended to their CTZNI code, creating the additional codes of 59, 79, 119, 129 and 139.

Similarly, some individuals with CTZNI codes of 31, 32, 33, 34, 38, 39, and 40 have an FSAFILI code indicating they are eligible. These individuals also have a '9' appended to their CTZNI code, creating the additional codes of 319, 329, 339, 349, 389, 399, and 409.

APPENDIX A

**ASSESSMENT OF THE QUALITY OF SELECTED VARIABLES
IN THE FY 2001 FSPQC DATABASE**

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

ASSESSMENT OF THE QUALITY OF SELECTED VARIABLES IN THE FY 2001 FSPQC DATABASE

The quality of several variables in the FY 1999 and 2000 FSPQC databases was inconsistent enough that we recommended against their use.¹ Some of those variables show coding improvements in the FY 2001 FSPQC database while some have lingering problems with inconsistent coding.

Variables that show improvement and thus are now usable include the following.

- ***CTZNi***. We now recommend using the citizenship status variable to identify categories of non-citizens on the national level as well as to distinguish between citizens and noncitizens.
- ***ABWDSTi***. We now recommend using the ABAWD status variable to identify non-disabled non-elderly childless adults who are subject to work registration and time limits. We do not recommend using the ABAWD status variable to identify the reason those individuals were allowed to participate.

We also recommend using **FSAFILi=17** (authorized to receive non-cash TANF benefit) as an additional indicator of categorical eligibility.

Variables that we continue to recommend against using or recommend using with caution include the following.

- ***Vehicle Variables Other Than FSVEHAST***. As with the FY 2000 FSPQC, we recommend against using EQUITY_A, EQUITY_B, VALUE_A, and VALUE_B. We also recommend against using VEHICLEA and VEHICILEB.

¹ For more information about recommendations for the FY 1999 and 2000 FSPQC databases, see the *Technical Description and Programmer's Guide for the Fiscal Year 2000 FSP QC Database and QC Minimodel*.

- ***Certain Shelter Variables.*** As with the FY 2000 FSPQC, we recommend against using SUA or HOMEDED. In addition, we recommend that RENT, AUC and SUAAMT be used with caution.
- ***DPCOSTi.*** While FSDEPDED and DPCOSTi appear to be consistent the majority of the time, we recommend that DPCOSTi be used with caution.
- ***YRSEDi.*** Because of the large amount of missing data and the discrepancy between the FSPQC and CPS data, we recommend using YRSEDi with caution.
- ***AMTADJ.*** We recommend AMTADJ be used with caution due to coding inconsistencies.
- ***DIVERi*** and ***ENERGYi.*** As in previous years, we recommend against using either of these variables due to low sample sizes.

I. CITIZENSHIP STATUS

The codes for CTZNi changed in 1999, but for the past two years, the coding changes did not appear to be uniformly observed by quality control reviewers. In our assessment of the FY 2000 FSPQC data, we found the reliability of CTZNi had improved somewhat, but was still problematic. As a result, we recommended using CTZNi in the FY 1999 and 2000 FSPQC databases only to identify citizens and noncitizens rather than to differentiate between subgroups of noncitizens.

The coding for CTZNi has continued to improve in the 2001 FSPQC file. For instance, three percent of all participants were coded as naturalized citizens. This percentage is similar to the percentage of naturalized citizens in the March 2001 CPS and follows the same trend over time. Because of the coding improvements, we now recommend using CTZNi on a national level beginning with the FY 2001 FSPQC file.

While the overall accuracy of CTZNi is high enough for the variable to be used on a national level, quality control reviewers in some areas of a few states appear to be using the pre-1999 citizenship codes. We therefore recommend against using CTZNi for state-level tabulations and reforms.

II. NON-DISABLED NONELDERLY CHILDLESS ADULTS SUBJECT TO WORK REGISTRATION

ABWDSTi was first added to the FY 1998 file. After assessing the quality of the variable on the FY 1998 and FY 1999 FSPQC files, we concluded that there were significant coding errors and recommended against using the new variable. While we found fewer apparent coding errors in our assessment of the FY 2000 FSPQC data, there were enough inconsistencies that we again recommended against using ABWDSTi.

On the FY 2001 file, just over three percent of all individuals are coded as being non-disabled nonelderly childless adults. After carefully assessing the data, we believe that ABWDSTi correctly identifies these individuals most of the time. In fact, because of the complexity of state programs and the limitations of the FSPQC data, using the ABWDSTi variable is likely more accurate than a simulation algorithm. While the ABWDSTi codes appear to be correct most of the time, there is some apparently inconsistent coding. Therefore, we recommend using ABWDSTi in the FY 2001 FSPQC database to identify non-disabled nonelderly childless adults, but recommend against using the variable to identify the reasons why these individuals are allowed to participate.

III. CATEGORICALLY ELIGIBLE DUE TO NON-CASH TANF BENEFIT

An additional code for FSAFILi (FSAFILi=17) was added in FY 1999. In that year, only 5 unweighted individuals were coded FSAFILi=17. In FY 2000, the number increased to 395, so 0.3 percent of weighted units had at least one person with FSAFILi=17. On the FY 2001 FSPQC file, 1317 unweighted individuals are coded FSAFILi =17 and 0.8 percent of all units have at least one person with FSAFILi=17. We now recommend using FSAFILi=17 as an additional indicator of categorical eligibility.

IV. VEHICLES

In our assessment of the FY 2000 FSPQC data, we recommended against using vehicle variables other than FSVEHAST because of coding inconsistencies. These coding issues still exist in the FY 2001 FSPQC database. In addition, the codes for VEHICLEA and VEHICLEB changed for the FY 2001 FSPQC database, and quality control reviewers may not yet be using the new codes.

In the 4 percent of all units with a positive FSVEHAST, FSVEHAST can be reconstructed (within \$1) using the other vehicle variables only 38 percent of the time. Among those units where FSVEHAST is greater than zero, data for the other vehicle variables are recorded most, but not all, of the time. In addition, specific vehicle data are collected on only two vehicles. In 6 percent of units with a positive FSVEHAST, FSVEHAST is less than the constructed total. In the remaining units with a positive FSVEHAST, FSVEHAST is greater than the constructed total. These may be units that have more than two countable vehicles.

Because of a prevalence of apparently inaccurate coding, we believe that quality control reviewers focus on computing the correct FSVEHAST, and are less concerned with accurately coding the remaining vehicle variables. We therefore again recommend against using vehicle variables other than FSVEHAST.

V. SHELTER

In our assessment of the FY 2000 FSPQC data, we recommended against using the variable SUA to determine whether a unit claimed the standard utility allowance or the actual utility amount. Instead, we suggested attempting to reconstruct FSSLTEXP using either AUC or SUAAMT in order to determine which was used. We also recommended against using

HOMEDDED due to inconsistencies. We make the same recommendations for the FY 2001 FSPQC and additionally recommend that RENT, AUC and SUAAMT be used with caution.

In the FY 2001 FSPQC database, FSSLTEXP is greater than zero for 87 percent of all FSP units. We can reconstruct FSSLTEXP (within \$1) using RENT, AUC, SUAAMT, and HOMEDDED for 85 percent of those units (73 percent of all units). Only 0.3 percent of all units have a positive value for HOMEDDED.

We believe that FSSLTEXP is likely to be correct, as it is used to determine FSP eligibility. The other shelter variables, however, appear to be inconsistently coded. Therefore, we again recommend against using SUA or HOMEDDED. In addition, because of inconsistencies, we recommend that RENT, AUC and SUAAMT be used with caution.

VI. DEPENDENT CARE COSTS AND DEDUCTION

In the FY 1998 through FY 2000 FSPQC files, DPCOSTi was coded as a range (1=\$1-25, 2=\$26-50...) instead of an exact amount. Because of that, we were unable to reconstruct FSDEPDED using DPCOSTi. In the FY 2001 FSPQC file, DPCOSTi is coded as the reported amount.

Only 5 percent of units have a positive value for either DPCOSTi or FSDEPDED. In 75 percent of units with a positive FSDEPDED, we can reconstruct FSDEPDED (within \$1) using the sum of DPCOSTi and the child-care expense limits. The remaining units have inconsistent values coded for DPCOSTi and FSDEPDED. Some of these units appear to have the total dependent care expense entered for each DPCOSTi. In other of these units, the parent is coded as having dependent care costs along with her children.

While FSDEPDED and DPCOSTi appear to be consistent the majority of the time, we recommend that DPCOSTi be used with caution.

VII. EDUCATIONAL LEVEL

The percentage of missing values for educational level is high. On the FY 1998, 1999 and 2000 FSPQC files, no data are entered for YRSEDi for 20 percent, 18 percent and 17 percent of all individuals, respectively. On the FY 2001 FSPQC file, the percentage of individuals with missing values for educational level rose again to 20 percent of all individuals. Of those adults who have an educational level recorded, 55 percent report having graduated from high school or receiving a GED. For comparison, in the 2001 March CPS, 79 percent of adults in households reporting receipt of food stamps also report having graduated from high school. Because of the large amount of missing data and the discrepancy between the FSPQC and CPS data, we recommend using YRSEDi with caution.

VIII. AMOUNT OF ALLOTMENT ADJUSTMENT

As in previous years, few units (6 percent) are coded as receiving an allotment adjustment. In 24 percent of these units, AMTADJ equals the difference between RAWBEN and FSBEN. Of units with an allotment adjustment, 46 percent received a prorated benefit and another 46 percent had a deduction for claims recoupment. AMTADJ equals the difference between RAWBEN and FSBEN for 48 percent of the units with a prorated benefit and 3 percent of the units with a deduction for claims recoupment. Because of these coding inconsistencies, we do not incorporate AMTADJ into FSPQC file algorithms and recommend using it with caution.

IX. DIVERSION PAYMENTS, ENERGY ASSISTANCE

Historically, both DIVERi and ENERGYi have had very low sample sizes. In the FY 2001 FSPQC database, seventy-one unweighted households are coded as receiving a diversion payment. (Forty are in Oklahoma and ten are in Maine.) This translates to 7,000 weighted households or 0.1 percent of all units. Of those units coded as receiving a diversion payment, 84

percent have a payment of \$75 or less. The average payment is \$66. Seven unweighted households, in five states, are coded as receiving energy assistance. The average amount is \$77. We again recommend against using either of these variables due to low sample sizes.

APPENDIX B

AUTOMATED EDITS TO FSP UNITS

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

AUTOMATED EDITS TO FSP UNITS

Inconsistencies in the way that alien data are reported in the FSPQC and the way that they are subsequently edited in the creation of the FSPQC database makes reform simulations involving aliens difficult and relatively inaccurate. In 1995 we identified and edited inconsistent cases manually to address these problems. However, since manually editing the FSPQC database is both time consuming and prone to error, we developed a set of algorithms to identify and correct these problems automatically during the recode program. This appendix describes what the algorithm looked for and what corrections were made. Additionally, the fiscal year 1997 QC file development process expanded these edits to deal with non-alien inconsistencies.

1. INCONSISTENT CODING OF CITIZENSHIP STATUS CODES

Problem: The citizenship status variable (CTZNi) is occasionally coded inconsistently with the food stamp case affiliation variable (FSAFILi). Some individuals with CTZNi codes of 5, 7, 11, 12, and 13 have an FSAFILi code indicating they are ineligible, while some individuals with CTZNi codes of 31, 32, 33, 34, 38, 39, and 40 have an FSAFILi code indicating they are eligible.

Solution: These individuals all have a '9' appended to their CTZNi code, creating the additional codes of 59, 79, 119, 129, 139, 319, 329, 339, 349, 389, 399, and 409.

2. INCONSISTENT REPORTING OF DEEMED TANF INCOME

Problem: Some individuals outside the FSP unit deem TANF income to people in the FSP unit but this income is not accounted for correctly within the FSP unit.

Solution: First, we identified households in which, (1) total person level income in the FSP unit is less than the units reported gross income; and (2) the discrepancies between person and unit level income appears to be caused by a person outside the FSP unit who is deeming TANF income. Once we identify these cases, the TANF income of the first person inside the FSP unit without TANF income is adjusted to reflect the amount deemed from outside the FSP unit. Additionally, those aliens outside the FSP unit who are found to deem TANF income and who have CTZNI codes of 4-12 or 13-15 with a YRMONTH > 199810 had their CTZNI codes changed to 49, 59, 69, 79, 89, 99, 109, 119, 129, 139, 149, or 159, respectively.

3. INCONSISTENT REPORTING OF DEEMED EARNED INCOME

Problem: Some individuals outside the FSP unit deem earned income to people in the FSP unit but this income is not accounted for correctly within the FSP unit.

Solution: First, we identified households in which, (1) total person level income in the FSP unit is less than the units reported gross income; and (2) the discrepancies between person and unit level income appears to be caused by a person outside the FSP unit who is deeming earned income. Once we identify these cases, the WAGE income of the first person inside the FSP unit without WAGE income is adjusted to reflect the amount deemed from outside the FSP unit. Those aliens outside the FSP unit who are found to deem WAGE income and who have CTZN codes of 4-12 or 13-15 with a YRMONTH > 199810 had their CTZN codes changed to 49, 59, 69, 79, 89, 99, 109, 119, 129, 139, 149, or 159, respectively. Additionally, aliens deeming earned income had their earned income adjusted by

the ratio of ((# of persons in the FSP unit)+(total # of persons in the household))/(# of persons in the FSP unit).

4. CODING ALGORITHM

The code below is the SAS code used in the recode program to identify and correct the three problems above.

```

*** set up temporary variables ***;
INSUM=0; ** Sum of all income of ALL FS persons **;
INSUM1=0; ** Sum of all income of FS persons with age=>0 and age<18 **;
INSUM2=0; ** Sum of all income of FS persons any other age **;
OUTSUM1=0; ** Sum of all income of persons afil 30-39 **;
GETPOS=0; ** Position of first person in unit

APPENDIX D

FY 2001 FSP PARAMETERS

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

TABLE D.1

FSP NET INCOME SCREEN, FY 2001

Household Size	Net Income Screen (Dollars Per Month) ^a		
	Continental United States, Guam and the Virgin Islands	Alaska	Hawaii
1	\$696	\$870	\$800
2	938	1,172	1,078
3	1,180	1,475	1,356
4	1,421	1,777	1,635
5	1,663	2,080	1,913
6	1,905	2,382	2,191
7	2,146	2,685	2,470
8	2,388	2,987	2,748
Each Additional	+242	+303	+279

^a The fiscal year 2001 FSP net income limits are based on the 2000 poverty guidelines issued by the Department of Health and Human Services. FNS derived the fiscal year 2001 net income limits by dividing the 2000 poverty guidelines by 12 and rounding up to the nearest dollar. The 2000 poverty guidelines were developed on the basis of the 1999 Census poverty thresholds. The net income screen is effective from October 1, 2000 to September 30, 2001.

TABLE D.2

STANDARD DEDUCTION MAXIMUM DEPENDENT CARE AND
EXCESS SHELTER EXPENSE DEDUCTIONS, FY 2001

Area	Standard Deduction ^a	Maximum Dependent Care Deduction ^b	Maximum Excess Shelter Expense Deduction ^c
Continental United States	\$134	\$200/175	\$300/340
Alaska	229	200/175	\$521/543
Hawaii	189	200/175	\$429/458
Guam	269	200/175	\$364/399
Virgin Islands	118	200/175	\$221/268

^a Prior to FY1997, the standard deduction was adjusted each October to reflect changes in the CPI-U for nonfood items. Since FY1997, the standard deduction has been frozen at FY1996 levels.

^b The household limit on the dependent-care deduction is equal to the maximum dependent-care deduction multiplied by the number of dependents in the household. The higher dependent-care deduction pertains to dependents under age 2; the lower deduction is for dependents age 2 or older.

^c The maximum allowable shelter deduction changed mid-fiscal year. The lower amount is the shelter deduction cap before March 1, 2001. The higher amount is the shelter deduction cap that states began using sometime after March 1, 2001. Because implementation of the shelter cap change varied from state to state, the FY 2001 FSPQC models implementation of the shelter cap change on a state-by-state basis.

TABLE D.3

MAXIMUM FOOD STAMP BENEFIT, FY 2001

Household Size	Maximum Food Stamp Benefit ^a						
	Continental U.S.	Alaska Urban	Alaska Rural I	Alaska Rural II	Hawaii	Guam	Virgin Islands
1	\$130	\$160	\$204	\$249	\$199	\$192	\$167
2	238	294	375	456	366	352	307
3	341	421	537	654	524	504	439
4	434	535	682	830	665	640	558
5	515	635	810	986	790	760	663
6	618	762	972	1,183	948	912	796
7	683	842	1,074	1,308	1,048	1008	879
8	781	963	1,228	1,495	1,198	1,152	1005
Each Additional	+98	+120	+154	+187	+150	+144	+126

^a The maximum benefit values are effective from October 1, 2000 to September 30, 2001 and are based on the cost of the Thrifty Food Plan in the preceding June for a reference family of four, rounded to the lowest dollar increment.

APPENDIX F
SSI INDICATOR

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

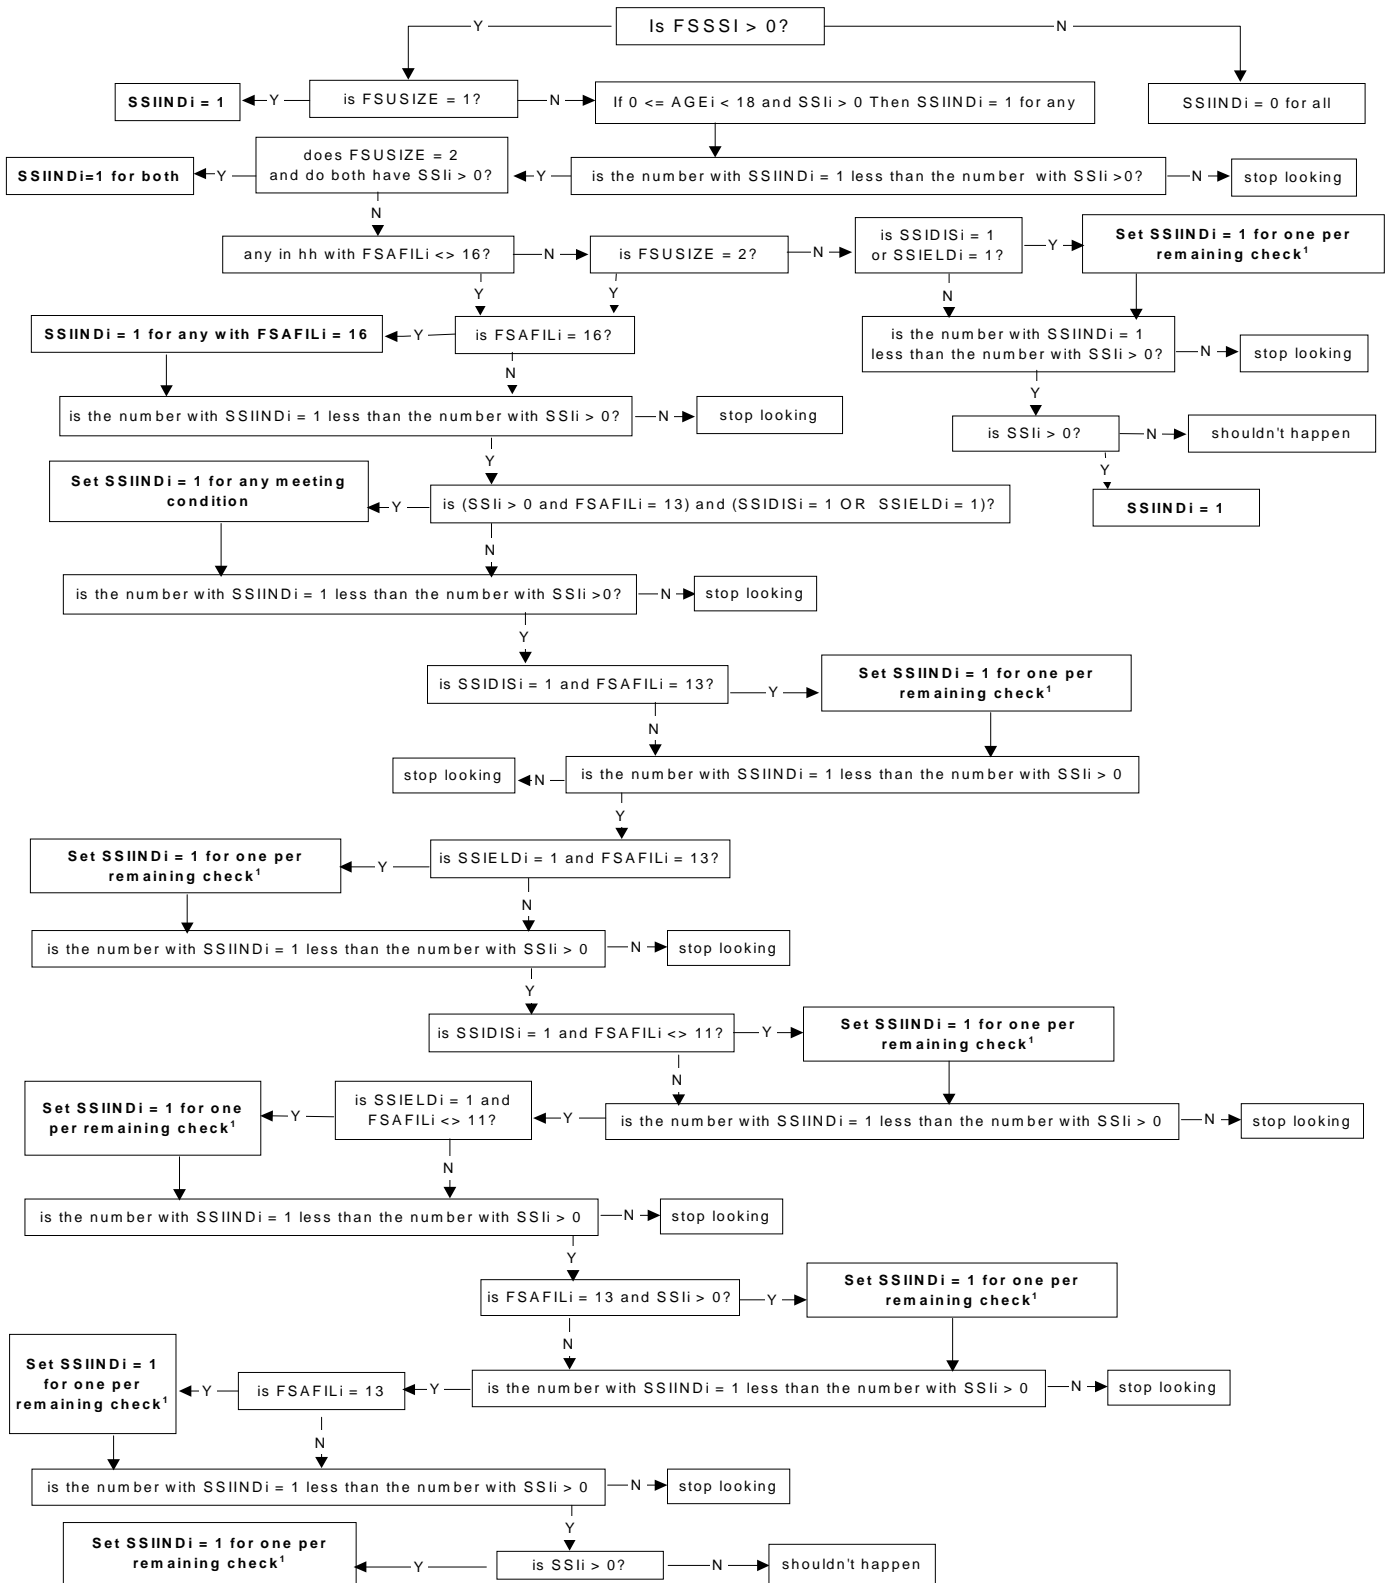

SSI INDICATOR (SSIINDI)

The SSI indicator identifies the probable intended recipient of the SSI income, based on the following assumptions:

- SSIINDi is restricted to units with FSSSI > 0.
- Children with SSI checks always have SSIINDi=1.
- In two-person units with two SSI checks, both have SSIINDi=1.
- In two-person units with one SSI check, everyone with FSAFILi=16 has SSIINDi=1. If neither has FSAFILi=16, SSIINDi is based on disability and elderly status and FSAFILi code (only one member has SSIINDi=1 in this case).
- In units of three or more where not everyone has FSAFILi=16, everyone with FSAFILi=16 has SSIINDi=1. If the number with FSAFILi=16 is less than the number of SSI checks, SSIINDi is based on disability and elderly status and FSAFILi code (the number with SSIINDi=1 cannot exceed the number of SSI checks in this case).
- In units of three or more where everyone has FSAFILi=16, we assume FSAFILi is miscoded for at least some members. Instead of relying on FSAFILi, we set SSIINDi=1 for elderly and disabled members up to the number of SSI checks in the unit.

The algorithm is illustrated in the attached flowchart (Figure D.1).

FIGURE F.1
SSI INDICATOR

¹ In these cases, the number with an SSI indicator must not exceed the number of SSI checks in the unit. The only cases where there can be more people with SSI indicators than SSI checks are those where multiple members have FSAFILI=16.
